

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

ANNUAL REPORT

OF THE

SECRETARY TO THE BOARD OF REGENTS OF THE UNIVERSITY OF CALIFORNIA.

To the honorable the Regents of the University of California:

GENTLEMEN: I have the honor to submit my report for the year ending June 30, 1890.

BOARD OF REGENTS.

EX OFFICIO REGENTS.

His Excellency R. W. Waterman, Sacramento, Governor, ex officio President of the Board.
 His Honor Stephen M. White, Los Angeles..... Lieutenant-Governor.
 Hon. Robert Howe, Sonoma..... Speaker of the Assembly.
 Hon. Ira G. Hoitt, A. M., Sacramento..... State Superintendent of Public Instruction.
 Hon. Christopher Green, Sacramento..... President of the State Agricultural Society.
 David Kerr, Esq., 47-49 Beale Street, S. F. President of the Mechanics Institute.
 Horace Davis, LL.D., San Francisco..... President of the University.

APPOINTED REGENTS.

Horatio Stebbins, 1609 Larkin Street, San Francisco..... Term expires 1894.
 Louis Sloss, Jr., 312 Sansome Street, San Francisco..... Term expires 1894.
 J. West Martin, Union Bank, Oakland..... Term expires 1898.
 Andrew S. Hallidie, 9 Fremont Street, San Francisco..... Term expires 1892.
 William T. Wallace, 799 Van Ness Avenue, San Francisco..... Term expires 1902.
 John Lyman Beard, Warm Springs, Alameda County..... Term expires 1892.
 Timothy Guy Phelps, Custom House, San Francisco..... Term expires 1896.
 Isaias William Hellman, Nevada Bank, San Francisco..... Term expires 1902.
 George Thomas Marye, Jr., 234 Montgomery Street, San Francisco..... Term expires 1898.
 Arthur Rodgers, 309 Montgomery Street, San Francisco..... Term expires 1906.
 George Jennings Ainsworth, North Temescal..... Term expires 1900.
 Delphin Michael Delmas, 310 Pine Street, San Francisco..... Term expires 1900.
 Albert Miller, 532 California Street, San Francisco..... Term expires 1906.
 Columbus Bartlett, 12 Montgomery Street, San Francisco..... Term expires 1896.
 Charles Frederick Crocker, cor. Fourth and Townsend Streets, S. F. Term expires 1904.
 James Franklin Houghton, 216 Sansome Street, San Francisco..... Term expires 1904.

Regular meetings of the Board of Regents are held fourteen times a year, viz.: on the second Tuesday in each month, and on the last Tuesday in May, and on the Tuesday preceding the last Wednesday in June.

April 1, 1890, His Excellency Governor R. W. Waterman appointed Louis Sloss, Jr., in the place of John S. Hager, deceased.

STANDING COMMITTEES.

For the Year ending June 30, 1890.

Endowment, Finance, and Auditing.—Regents Hallidie, Stebbins, and Marye.

Grounds, Buildings, and Other Property.—Regents Martin, Phelps and Ainsworth.

Law.—Regents Wallace, Rodgers, and —.

Congressional Land Grant.—Regents Rodgers, Beard, and Crocker.

Library and Museum.—Regents Hager, Stebbins, and Delmas.
Lick Observatory.—Regents Phelps, Hager, and Bartlett.

For the Year ending June 30, 1891.

Finance and Audit.—Regents Hallidie, Miller, and Hellman.
Grounds and Buildings.—Regents Martin, Miller, and Kerr.
Law.—Regents Wallace, Rodgers, and Delmas.
Congressional Land Grant.—Regents Rodgers, Houghton, and Beard.
Lick Observatory.—Regents Phelps, Crocker, and Delmas.
Library and Museum.—Regents Stebbins, Bartlett, and Sloss.
Internal Administration.—Regents Marye, Stebbins, and Bartlett.
United States Agricultural Experiment Stations.—Regents Houghton, Ainsworth, and Martin.

SPECIAL COMMITTEES.

On Instructors in English and in Modern Languages.—Regents Rodgers, Hager, Stebbins, and Davis.
To Place the Ashburner Clock.—Regent Houghton and Committee on Grounds and Buildings.
Regarding Material of State Geological Survey.—Regents Davis and Stebbins.
Leave of Absence of Professor Moses.—Regents Rodgers, Stebbins, and Houghton.
On Selection of a Professor of Military Science and Tactics.—Regents Rodgers, Bartlett, and Houghton.
On Selection of a Room for Board Meetings.—Regents Houghton, Hallidie, and Sloss.
On the Nomination of Standing Committees for the Year.—Regents Hallidie, Martin, and Bartlett.
On the Building of the James Lick Tomb on Mt. Hamilton.—Joint committee consisting of the Committee on Lick Observatory and Finance Committee.

MEMORIAL OF REGENT JOHN SHARPENSTEIN HAGER.

Presented and read by Regent D. M. DELMAS at a meeting of the Board held May 13, 1890.

Regent Delmas presented the following memorial, which was adopted and ordered spread on the minutes:

Hon. John S. Hager, a member of the Board of Regents of the University of California, having died on the nineteenth day of March, 1890, the undersigned, who were appointed a committee for the purpose, beg to submit the following memorial of his private life and public services:

John S. Hager was born in German Valley, Morris County, New Jersey, on March 12, 1818, and had just entered upon his seventy-third year when the hand of death was laid upon him. He came of German ancestors, who, during the religious troubles that beset their native land early in the eighteenth century, expatriated themselves to Holland, whence they shortly afterwards emigrated to this country. They landed at Philadelphia in 1707, and, after a short period of rest, settled in company with a band of fellow exiles upon a stretch of unoccupied land in New Jersey, on the south bank of the Raritan. Their new home shortly became a thriving colony—the German Valley of to-day—and is still in the possession of the descendants of these first settlers. During the war of the Revolution, it furnished many recruits to the patriot army, and General Washington found in its sons some of his bravest soldiers and most capable officers.

The subject of this memorial spent his boyhood on his father's farm, and when old enough to receive instruction, evinced such a marked aptitude for learning that his par-

ents gave him every educational advantage within their power. He was prepared for college, sent to Princeton, and there fulfilled the promise of his youth by obtaining his degree of Bachelor of Arts at the age of eighteen. After graduating he continued his academic studies, to which he added a course of law, under the instruction of Senator J. W. Miller, of Morristown, New Jersey. A couple of years later the degree of Master of Arts was conferred upon him. In 1840 he was admitted to the bar, and commenced to practice at Morristown. Eight years afterwards he started for California.

He arrived here in the spring of 1849, and, after a short residence in San Francisco, joined the Argonauts in their rush to the gold regions. For some months he engaged in trade and mining ventures at Bear River and Gold Run, but tiring of these pursuits and foreseeing the great future of San Francisco, he closed up his business in Nevada County and reached the metropolis in time to celebrate the New Year. He returned here to the profession, and soon secured a large practice. Two years later we find him entering upon the stage of politics as a State Senator. In his new career he won from the start the confidence of his constituents by the unyielding uprightness of his conduct, and the respect of his colleagues by the stern sense of duty which guided all his deliberations.

After the expiration of his term in the Senate, Mr. Hager was in 1855 elected, on the Democratic ticket, District Judge of the Fourth Judicial District, for a full term of six years. His opponents were L. Sawyer, E. W. T. Sloan, and Alexander Campbell, over all of whom he received a majority. During his judicial career he witnessed the splitting of the Democracy by factional disputes, the birth and rapid growth of the Republican party, and among other memorable events, the fierce political contests which resulted in frequent bloody duels between the leaders. No fewer than sixty charges of homicide were tried before him, the most noted one being the case of Charles Cora, charged with the murder of General William H. Richardson, in November, 1855. It was on the trial of this cause that the lamented Colonel Baker made the memorable speech in the prisoner's defense, which brought about a disagreement of the jury. On the civil calendar of his Court, Judge Hager had many important suits to try. Chief among them was the protracted litigation arising out of the failure of the house of Adams & Co.

After the Terry-Broderick duel, when David S. Terry was brought to the bar for his share in the transaction, he granted the motion of his lawyers for a change of venue, on the ground that every intelligent person had formed an opinion in the case, and that it therefore became his bounden duty to do so. Later on, when the Broderick will contest came up before him, he did not hesitate to decide that the pretended will was a forgery—an opinion that has since been very largely shared in by those having an interest in the matter—the decision of the Probate Court to the contrary, notwithstanding.

On retiring from the bench, Judge Hager made a three years' tour of the Old World, including travels through Asia and Africa as well as Europe. Some eighteen months after his return home, in 1865, he made his appearance once more in politics; defeated his Republican opponent, William H. Sharp, and was elected Democratic State Senator at the special election called to fill the vacancy created by the resignation of John H. Redington. For the succeeding sessions he continued to serve in the Senate, and the greater part of the time presided as Chairman of the Judiciary Committee. While he aided, as far as in his power, in advancing bills favorable to the public good, he was the inveterate foe of all that savored of dishonesty.

But it is chiefly as a friend of the University of California that his services as a legislator are gratefully recalled by us on this occasion. To his action and wise management as Chairman of the joint committee of the Senate and Assembly is largely due the framing and the passage of the bill by virtue of whose provisions we are here assembled as a Board of Regents. Nor were his labors limited to the cause of the higher education which may be pursued in the halls of Berkeley; he was ever a wise and discriminating friend of the common schools and a zealous promoter of their efficiency. As a member of this Board from its earliest establishment, we, who for many years have met him in this chamber, will ever recall with grateful memory the unvarying courtesy of his deportment, the wisdom of his counsel, and the unflinching devotion with which he attended to the interests of the University.

In 1872 he succeeded Eugene Casserly as United States Senator and served two sessions. After some years of retirement, he received the appointment of Collector of Customs of San Francisco from President Cleveland, and held the office from 1885 to 1889, in the March of which year he resigned. Of the other political offices he was chosen to fill may be mentioned, membership in the Constitutional Convention of 1879, and the Presidency of the Board of Freeholders elected to prepare a charter for the City of San Francisco in 1882.

Judge Hager married at St. Louis, Mo., in October, 1872, the daughter of James H. Lucas, a leading banker of that place, and leaves his widow and two daughters to mourn his loss. To few men has it been allotted to fill a larger space in public life or reap honors more varied, abundant, and lasting. Whether as a legislator in the early dawn of our State government; as a Judge during the troublesome times of the Vigilance Committee; as a Senator in the halls of the National Congress; as a member of the Convention which gave us our present Constitution; as the chief Federal officer upon this coast under the administration of President Cleveland; or as a life-long member of this Board, the name of John S. Hager is written upon every page of the history of California; consecrated by high public services, whose benefits are reaped by the present generation, and whose memory posterity will not unwillingly recall.

D. M. DELMAS.
 ARTHUR RODGERS.
 GEORGE T. MARYE, Jr.

The Secretary was directed to send a copy to the family of the deceased Regent.

REMARKS BY REGENT DELMAS.

MR. PRESIDENT, AND GENTLEMEN OF THE BOARD OF REGENTS: I cannot permit this occasion to pass without referring, in a few brief words, to the eminent services and the intellectual relations of the late Regent Hager with the University of California, and, likewise, to give expression to the sentiments of respect, and of esteem, and to the feelings of friendship entertained for him by the members of this Board, and also in appreciation of the high estimation in which he was held by the people of the State of California, both as a public man and as an eminent citizen.

We little thought at a recent meeting of the Regents, held in this city, that in less than one week's time we would be called upon to mourn the sudden death of Regent Hager. He was present at that session of the Board, and participated in its deliberations, seemingly in his usual health and vigor, without any indications whatever of so sudden a termination of his life.

Regent Hager was prominent and conspicuous in that galaxy of distinguished men who constituted the first Regency of the University of California. Gentlemen selected from the State at large, with special reference to their high character, and for their recognized ability and learning, to inaugurate and lay deep and strong the foundations of the University in conformity with the law of its organization.

Governor Haight, Holden, Friedlander, Tompkins, Butterworth, Ralston, Felton, Dwinelle, Moss, Merritt, and later, Watt, Casserly, McKee, Winans, Ashburner, Redding; most of these Regents had gone over the dark waters before him, but their names and their fame will be found written upon every page of the records of the University, in testimony of their fidelity to the high trust of the Regency, and will stand as a monument to their memory forever.

Mr. President, in whatever light we view the life and character of Regent Hager, whether as a distinguished member of the judiciary of the City of San Francisco, or as an honest and incorruptible representative of that metropolis in the Senate of the State of California, or as a member of the Constitutional Convention of the State, as a Federal Collector of the Port, as Regent of the University of California, or as Senator of the United States, in every public station to which he had been accredited his official administration was characterized by the most signal ability and unquestionable integrity.

Mr. President, the life and character of Regent Hager was more beautifully exemplified and shown brightest in the sanctuary of his own hospitable home, where, as an affectionate husband, father, and benefactor, his name and his memory will be cherished and revered forever.

Mr. President, eulogy upon the life and character of public men who have discharged all trusts committed to their keeping with perfect fidelity, and have met the full measure of public expectation and approbation in all the relations and responsibilities of life, is eminently proper, and in this sense, and in the sense of a warm personal friendship, I offer this brief tribute to the memory of the late Regent Hager.

TRANSACTIONS OF THE BOARD OF REGENTS.

Room for Board Meetings.

Regent Houghton moved that the committee appointed to select a room for Board meetings be authorized to rent the room in the Williams & Bixby building, 320 Sansome Street, recommended by the committee for \$30 per month, and that the committee be authorized to expend \$500 in furnishing said room. [Carried, May 27, 1890.]

1. AMENDMENTS TO AND INTERPRETATIONS OF BY-LAWS, ETC.

Meetings of the Board of Regents.

Regent Bartlett then called up his notice to amend Article 365 of Regents' Manual, as follows: Amend Article 365 by striking out the words "September, December, March, and the last Tuesday in May," and insert in lieu thereof the words "of each and every month and the last Tuesday in May of each year." [Adopted, May 18, 1890.]

Article 365 as amended now reads: "The regular meetings of the Board shall be on the second Tuesday of each and every month, the last Tuesday in May, and on the Tuesday preceding the last Wednesday of June of each year."

Committee on Internal Administration.

Regent Hallidie called up his notice of December 10, 1889, informing the Board of his intention to move an amendment to Article 374, Regents' Manual, by adding to the list of standing committees, a Committee on Internal Government and Education, and submitted the following:

"Proposed New Committee.—Whose duty shall be to consider and report on questions affecting appointments, promotions, transfers, and the compensation of professors and others on the educational staff of the University, and to confer with the President of the University on matters affecting the government of the various departments of the University."

On motion, the title was made to read "Committee on Internal Administration."

The article as given above and as amended was then adopted. [January 18, 1890.]

A motion to change the number of the Committee on Internal Administration, and make the number five, was lost.

A ballot was then ordered.

The Chair directed the Secretary to collect and count the ballots.

The votes were counted as follows: Marye, 8; Stebbins, 6; Delmas, 7; Bartlett, 2; Hager, 3; Hoitt, 1; Houghton, 1; Rodgers, 4; Hallidie, 1.

Thereupon the Chair announced that Regent Marye, having received eight votes, Regent Delmas, seven votes, and Regent Stebbins, six votes, were elected members of the Committee on Internal Administration. [Adopted, January 18, 1890.]

Revised Edition of the Regents' Manual.

Regent Rodgers offered the following:

Resolved, That the resolution requesting the Law Committee to prepare an appendix to the Regents' Manual be amended by authorizing the preparation of a revised edition of the Regents' Manual, instead of an appendix. [Adopted, January 18, 1890.]

The manuscript of the revised edition is nearly completed.

Committee on Agricultural Experiment Stations.

Regent Hallidie called up his notice to amend Article 374 of the Regents' Manual, and moved that the Committee on United States Agricultural Experiment Stations be made a standing committee. [Adopted, June 24, 1890.]

Diploma Fund, and Preparation of the Register.

Your committee is of the opinion that the provisions of Article 449 of the Regents' Manual, as at present enacted, do not apply to students who were members of the University on June 30, 1886, and who have been members continuously ever since. Your committee is also of the opinion that the final preparation of the University Register, under the resolution adopted November 13, 1888, rests with the Board of Regents, and your committee would therefore recommend that all points of difference hereafter arising in the preparation of the Register be submitted to a committee of the Board, to be appointed for that purpose. [Report of Committee on Internal Administration; concurred in, April 8, 1890.]

2. INVESTMENT IN REAL ESTATE.

Regent Wallace submitted the following report of the Law Committee:

The Law Committee, to whom was referred the note of the counsel of the Board, to the effect that the Board, if it see fit, may invest the funds derived from the Congressional Grant of 150,000 acres in improved real estate, provided that such investment produce an income of not less than 5 per cent per annum upon the amount or amounts so invested, beg leave to report that they concur in the view of the counsel as to the authority of the Board to make such investment. [Adopted, January 18, 1890.]

We recommend the adoption of the following:

Resolved, That the Finance Committee be authorized to negotiate, subject to the approval of the Board of Regents, for the purchase of productive real estate, provided such property can be obtained as will realize an income of not less than 5 per cent net on the principal invested. [Adopted, February 11, 1890.]

Regent Hager moved that the Finance Committee be authorized to consider the propriety of purchasing unproductive real estate. [Approved, March 11, 1890.]

3. ADVANCES.

H. A. Kenyon and other agents for periodicals, reviews, etc., furnish the University with reviews, etc., for less money than the publishers. The University in this way obtains a discount of 20 per cent, the agent

a discount of 10 per cent. The agents can maintain this arrangement only when promptly paid.

We recommend, therefore, that the Treasurer be authorized to advance the money due such bills upon an order of the Finance Committee. [Report of Finance Committee; concurred in, January 18, 1890.]

4. REDEMPTION OF BONDS.

WHEREAS, The State is about to redeem sixty-six bonds of \$1,000 each of the Funded Debt Bonds of 1873, namely, number one hundred and seventy-three (173) to number two hundred and thirty-eight (238), both inclusive; therefore, be it

Resolved, That the State Treasurer is hereby requested to deliver to the Treasurer of the Regents of the University of California, for investment, the said sum of sixty-six thousand (\$66,000) dollars now deposited, or about to be deposited in the State Treasury to the credit of the Consolidated Perpetual Endowment Fund of the University of California, upon the presentation of this resolution, certified by the Secretary and indorsed by the Governor of the State requiring the same. [Adopted, March 11, 1890.]

Resolved, That the Treasurer of the State of California is hereby requested to deliver to Louis Sloss, Treasurer of the University of California, for collection and investment, numbers forty-five (45), forty-six (46), forty-seven (47), and forty-eight (48), of School Bonds of the Town of Alameda, par value of \$500 each, now in the hands of the State Treasurer to the credit of the Consolidated Perpetual Endowment Fund of the University of California, upon presentation of this resolution, certified by the Secretary of the Board of Regents of the University, and indorsed by the Governor of the State requiring the same. [Adopted, April 8, 1890.]

Resolved, That the State Treasurer is hereby requested to deliver to Louis Sloss, Treasurer of the Regents of the University of California, for redemption, the bonds of the City of Santa Clara numbered 167 to 172, inclusive, par value of \$500, total amount \$3,000, now deposited in the State Treasury to the credit of the Consolidated Perpetual Endowment Fund of the University of California, upon the presentation of this resolution, certified by the Secretary, and indorsed by the Governor of the State, requiring the same. [Adopted, June 24, 1890.]

Resolved, That the State Treasurer is hereby requested to deliver to Louis Sloss, Treasurer of the Regents of the University of California, for investment, the sum of \$2,000, being the principal of Plumas County bonds numbers 7 and 9, par value \$1,000 each, now deposited in the State Treasury to the credit of the Consolidated Perpetual Endowment Fund of the University of California, upon the presentation of this resolution, certified by the Secretary, and indorsed by the Governor of the State, requiring the same. [Adopted, June 24, 1890.]

5. INSURANCE.

We recommend that the United States arms in the basement of the North Hall be insured in the sum of \$4,000. [Concurred in, February 11, 1890.]

Regent Hallidie presented the report of the Finance Committee, as follows:

November 20, 1888, the Board insured property at Berkeley to the amount of \$430,830, in policies running three years. The premium paid was \$7,254 80.

February 20, 1890, the policies referred to were canceled, and the return premiums, amounting to \$3,363 06, were deposited with the Treasurer of the University. February 20, 1890, new policies for three years were issued covering \$432,330, including \$4,000 on arms belonging to the United States Government, being an increase of \$1,500 on the amount insured in 1888. The premiums on the sum insured are \$4,323 30. The return premium, with an addition of \$960 24, pays the premium on \$432,330 for three years. There is thus a saving of \$2,931 50 by cancellation and reinsurance. The rate of insurance on the canceled policies was 1.68 per cent for three years, and the rate on the new insurance is 1 per cent for three years. [Approved, March 11, 1890.]

6. RELEASE OF MORTGAGE.

We submit for the consideration of the Board, the application of C. H. Huffman, for a release of two thousand nine hundred and nine acres from his mortgage to the Regents. The mortgage now covers four thousand and seventy-four acres. [Report of Finance Committee; application denied. February 11, 1890.]

C. H. Huffman requests that Sections 31 and 32 of the property covered by his mortgage to the Regents be released.

We recommend that said sections be released upon the payment by him of \$12 per acre on the land to be released. There are one thousand two hundred and eighty acres in the property sought to be released, and the sum to be credited on his mortgage will be \$15,360. [Report of Finance Committee; concurred in, April 8, 1890.]

Regent Hallidie submitted the following forms of certificates, to accompany releases of mortgages:

CERTIFICATE AUTHORIZING RELEASE OF MORTGAGE.

To the Finance Committee of the Regents of the University of California:

to the Finance Committee of the Regents of the University of California.

to
Regents of the University of California.

Mortgage to secure promissory note for \$—.
Dated—day of—, 18—.
Recorded,— County, in Vol.— of Mortgages, p.—, on the—day of—, 18—.

I do hereby certify, that the note and mortgage above referred to has matured, and that the principal sum thereby secured, together with all interest and other charges thereon, have been fully paid.

Dated at San Francisco, on this—day of—, 18—.

Treasurer of the University of California.

To the President and Secretary of the Regents of the University of California:

It appearing from the foregoing statement and certificate of the Treasurer of the University of California that the said mortgage and note therein referred to has matured, and that all the principal sum, interest and charges thereon and thereby secured have been fully paid, the President and Secretary of the Regents of the University of California are hereby requested to execute and deliver a release of said mortgage, pursuant to a resolution of said Board of Regents, duly adopted on the first day of December, 1885, to John B. Mhoon, counsel of the Board, who will, if there is no legal objection, deliver the same to the mortgagor.

Dated at San Francisco, this—day of—, 18—.

Finance Committee of the Regents of the University of California.

[Approved, November 12, 1889.]

7. CLAIM OF W. W. DEAMER.

In the matter of W. W. Deamer's claim for \$75 the following is a statement of the case: Prior to October, 1888, the salary paid to Mr. Deamer as Recorder was \$400 per annum. In July and September, 1888, Mr. Deamer informed the President that he did not wish to be reappointed if the salary could not be increased to \$500 per annum, which statement has never been changed.

Immediately upon receipt of the Secretary's letter (about October 15, 1888) notifying him of his reappointment at the existing salary, Mr. Deamer reported to the President that he could not accept, and at this time he proposed to embody this statement in a letter to Secretary Bonté for the information of the Board of Regents.

President Davis dissuaded him from this step, suggesting that the increase of salary might properly be expected to come before the Board of Regents as a recommendation from the Committee on Salaries. Believing that the President of the University would see that the deficiency would be made good, Mr. Deamer continued.

We therefore recommend that Mr. Deamer's claim for \$75 be paid.
[Concurred in, January 18, 1890.]

8. PRINCIPAL OF LAND FUNDS.

That in order to ascertain the exact amount to be credited to the different Congressional grants of land, the Finance Committee is authorized and instructed to have the books of accounts of the Land Department examined to date, and a report made thereon to the Board of Regents. [Report of Finance Committee; concurred in, April 8, 1890.]

9. INTEREST ON DIPLOMA FUND.

Petition of the graduating class for an appropriation of the accrued interest on their diploma deposits to aid in paying the expenditures incident to Class Day Exercises.

Report of the Secretary.

On motion, \$80 was appropriated. [May 13, 1890.]

10. LOST CERTIFICATES OF DEPOSIT.

Report of the Secretary.

The application of W. D. Chapman for return of \$7 90, he having lost his certificate of deposit, was granted, the amount to be paid upon the filing of a bond by the applicant. [February 11, 1890.]

Petition of D. S. Halliday for the balance of \$10, due him on certificate of deposit No. 122, Physical Laboratory. Ordered that the said amount be paid to the applicant upon his executing a satisfactory bond. [March 11, 1890.]

Petition of W. H. Wright for repayment of the balance due him on a lost certificate of deposit in the Chemical Laboratory. Granted, upon

condition that he give a bond satisfactory to the Secretary. [June 24, 1890.]

11. REPORTS OF COMMITTEE ON INTERNAL ADMINISTRATION.

Increase of Salary.

Your committee recommends that E. R. Drew, Assistant in Physics, and W. J. Raymond, Assistant in Physical Laboratory and in Mechanics, be given a salary of \$1,200 per annum, each, from the beginning of the next fiscal year, it being understood that they are to give their whole time to their duties in the University. [Concurred in, April 8, 1890.]

With reference to the application of Dr. Henry Senger for an increase of rank, your committee is of the opinion that all suggestions of promotion in rank should come, in the first instance, to the Board through the President of the University. Your committee recommends an increase in Dr. Senger's pay from \$1,500 to \$1,600 per annum to the consideration of the Finance Committee. [Concurred in, April 8, 1890.]

We recommend that the petition of the Assistant Librarian be granted, and that his salary be increased accordingly from \$75 to \$100 per month, to take effect July 1, 1890. [Concurred in, May 27, 1890.]

We recommend that E. L. Greene, who is now Assistant Professor of Botany at a salary of \$1,500 a year, be given the minimum salary provided for Assistant Professors, namely, salary of \$1,800 a year, commencing July 1, 1890. [Concurred in, June 24, 1890.]

12. REPORTS OF THE LAND COMMITTEE RELATING TO THE CONGRESSIONAL LAND GRANT OF 150,000 ACRES.

Land Agent's Report.

At the request of your committee the Land Agent has prepared an explanatory report and schedule on the condition of all our land grants and sales thereof, which we decree of sufficient importance to recommend its printing. [Ordered printed by State Printer, November 12, 1889.]

Collections.

Resolved, That the counsel of the Board be instructed to collect the principal and interest due from purchasers of land from the University. [Adopted, September 10, 1889.]

Enforcement of Contracts.

Your Committee on Land recommend that the Land Agent and attorney of the Board be instructed to enforce all contracts for the purchase of land. [Concurred in, April 8, 1890.]

Assignments.

We recommend that no assignments be accepted unless of advantage to the University; that when the original applicant is financially responsible, he be held responsible for all money due on land. [Concurred in, January 18, 1890.]

Abandonment of Locations.

R. McGarvey assigned to James Hopkins location Nos. 1733 and 1734. Hopkins now desires to abandon said locations.

We recommend that R. McGarvey be held for the money due on said locations. [Adopted, January 18, 1890.]

Assent to Assignment.

We recommend that the deed of A. A. Wheeler to N. K. Masten, of land covered by location No. 1790, be recognized upon condition that N. K. Masten agree to pay for the same in cash. [Adopted, January 18, 1890.]

Repayment.

We recommend the payment of the claim of T. H. French for \$40, amount paid by him on location No. 1773½. The land has never been listed, and the University cannot give title to said land; and that the Secretary be instructed to obtain a release of all claims against the Regents, the release to be prepared by the counsel of the Board. [Adopted, January 18, 1890.]

Claim for Credit.

J. A. Long located the land covered by location No. 1324 and paid \$257 58 thereon. The claim was forfeited to the Regents for non-payment of interest, and sold to one Eby. Eby has assigned to Long, and Long now desires to have the amount paid by him before the land was forfeited, credited to him as a new purchaser on the balance of principal now due.

We recommend that said application be refused. [Concurred in, January 18, 1890.]

Excess Payments.

Return of "Excess Payment."—Resolution offered by Regent Wallace, and petition of James and J. K. Lynch:

The United States land officers designate Government land within the exterior limits of railroad grants as double minimum, for which the purchaser must pay the Government double the ordinary price—that is, \$1 25 per acre in excess. Originally land could not be selected from this class. By the Act of June 8, 1868 (Reg. Man., p. 15), such land could be selected by taking one acre in lieu of two under the original Act. But by Act of March 13, 1871 (Id. 16), such land could be selected acre for acre, provided the State (University) should pay the United States on issuance of patent the extra \$1 25. In some instances the United States land officers assumed a railroad land grant to exist which afterwards was decided invalid, and in the meantime sold land on this assumption at \$2 50 per acre. By an Act of Congress, passed June 16, 1880, it is provided as follows:

"In all cases where parties have paid double minimum price for land, which has afterwards been found not to be within the limits of a railroad grant, the excess of \$1 25 per acre shall in like manner be repaid to the purchaser thereof, or to the heirs or assigns."

In making sales of University lands the Land Agent required the payment of \$1 25 per acre in such cases, in addition to the \$5 per acre,

the regular price of our lands. The sum of \$—— of such excess payments has been collected, of which \$—— have been paid to the Government, and which the resolution mentioned intended to authorize the purchasers from the University to collect under the Congressional Act cited. Of the remainder in our treasury Messrs. Lynch ask \$2,042 28 paid by them on purchases from the University. It will be borne in mind that the University land was granted to the State, and by it their entire disposal was imposed on the Regents. (Reg. Man., p. 84.) The Board, wisely we think, required all purchasers of land to sign a written application or contract, of which there have been two distinct forms. The first was used until 1884, and the second subsequently. The essential difference for our purpose between the forms is that in the first or earlier the applicant agrees to pay \$6 25 per acre (for the land in question), while in the other (Reg. Man., p. 213) he agrees to pay \$5 if minimum, and \$6 25 if double minimum.

In other words, the University sold this class of lands until 1884 by an absolute contract for \$6 25 per acre, and thereafter, on a conditional contract, for \$5 or \$6 25 per acre. Petitioners urge the repayment of the excess, \$1 25 in all cases, under the claim that it was required by the University for the purpose of being paid to the Government, and this now being unnecessary, it should be returned to them. We cannot recognize this claim. The purchaser has no interest in the application of any portion of the purchase money. It is to be noted further, as to the purchases made by James Lynch, contracts extending the time of payment were made in 1882, wherein the amount of unpaid balance, calculated at the rate of \$6 25 per acre, is specified. This was no misrepresentation or mistake caused by the University. The purchaser made his own selection of land, and then agreed to pay therefor \$6 25 per acre, and received and still has what he bought.

We therefore recommend as follows:

1. That said resolution be not passed, being too general.
2. That the following resolution be adopted:

Resolved, First, that purchasers of land under the present form of contract (Art. 468, Regents' Manual, p. 213), upon application to the Land Agent, may be credited with amount of the excess payments made by them, and be paid any balance over their indebtedness, except that such credit shall not be given nor balance paid over in cases where the excess payments have been turned over to the United States land officers, until return of such excess payments to the University.

Second—That the Land Agent is authorized to apply for, and as fast as convenient, to secure the repayment to the University from the United States Land Department of all excess payments, and of all other moneys, if any, to which the University may be entitled.

Third—That the petition of James and J. K. Lynch be denied, except as to applications of J. K. Lynch (Nos. 1769, 1770, and 1771), and that these be adjusted according to the foregoing provisions of this resolution. We add further, that James and J. K. Lynch made similar petitions to those now considered, which, on March 31, 1887, the Board denied. [Adopted, January 18, 1890.]

Demand for Return of Excess.

SAN FRANCISCO, May 27, A. D. 1890.

To the Regents of the University of California:

We, Martin Luther and Jacob Luther, and each of us do hereby most respectfully demand that you pay us the sum of \$6,762 12, heretofore collected by you from us as excess of \$1 25 per acre on what was supposed to be double minimum lands sold by you to us within the district of lands supposed to include a grant of lands by the United States to the Atlantic and Pacific Railroad Company, but within which district no grant was, in fact, made to said railroad company, and which lands so sold by you to us were not, in fact, double minimum lands, which moneys were, therefore, received by you under a mistake, and for the use and benefit of, and in trust for us and each of us.

Yours very respectfully,

MARTIN LUTHER, and JACOB LUTHER.

By J. T. Burke, Mich. Mullany, and Wm. Grant, their attorneys.

SAN FRANCISCO, Cal., May 27, A. D. 1890.

To the Regents of the University of California:

I, J. T. Burke, do hereby most respectfully demand that you pay me the sum of \$11,752 47, heretofore collected by you, in the following portions or sums from the following named persons, viz.: James Lynch, \$1,470 84; E. T. Donnelly, \$2,688 05; James K. Lynch, \$621 53; L. Godchaux, \$1,951 60; M. Brandenstein, \$1,616 81; J. M. Wood, \$50; Charles Ashton, \$150; Jesse D. Carr, \$50; Samuel A. Rachliffe, \$50; Wesley Burnett, \$250; Alexander Coyner, \$113 83; Robert Gordon, \$50; S. B. Emerson, \$141 70; J. Winteral, \$50; Washington Rohrbach, \$200; W. C. Mathers, \$100; R. E. Jack, \$99 03; Lauchlin McDonald, \$50; Peter Donnelly, \$100; José G. Sanchez, \$50; Herman Tompkins, \$50; Fernando R. Farman, \$154 56; Enus Blohm, \$50; Charles Lux, \$795 39, and J. W. Cooper, \$849 13; and I hereby demand the same, as assignee of said persons, and of each of them, and which moneys were heretofore collected by you from said persons as excess of \$1 25 per acre on what was supposed to be double minimum lands sold by you to said persons, or their assignors, within the district of lands supposed to include a grant of lands by the United States to the Atlantic and Pacific Railroad Company, but within which district no grant was, in fact, made to said railroad company, and which lands so sold by you to said persons, or their assignors, were not in fact double minimum lands, and which moneys were, therefore, received by you under a mistake, and for the use and benefit of and in trust for said persons, and their successors in interest, and which successor in interest I now am, as hereinbefore stated.

Yours, very respectfully,

J. T. BURKE.

By Mich. Mullany and Wm. Grant, his attorneys.

On motion, demands denied.

Extension of Time.

We recommend that the application of E. H. Curtis for extension of time in paying for land in locations Nos. 1639 and 1640 be denied. [Concurred in, November 12, 1889.]

John C. Schlarbaum makes application for further time in paying for land purchased by him from the Regents. The applicant was informed January 3, 1887, by the Land Agent, that he could have as long a time as he wished to pay the principal, and that the Regents preferred the interest. He states that he would be compelled to abandon the land if required to pay March 1, 1890. We therefore recommend the extension of time for one year, provided the applicant pays the interest promptly. [Approved, January 18, 1890.]

Sale of Land.

C. Yager offers to purchase the S.W. $\frac{1}{4}$, the S.E. $\frac{1}{4}$ of N.W. $\frac{1}{4}$, and the S.W. $\frac{1}{4}$ of N.E. $\frac{1}{4}$ of Sec. 9, Tp. 14 S., R. 2 E., 240 acres.

We recommend that said land be sold at \$7 50 per acre, cash. [Approved, January 18, 1890.]

C. Lazear offers to purchase location No. 519, covering 80 acres of land in Yuba County, being the S. $\frac{1}{2}$ of S.W. $\frac{1}{4}$ of Sec. 20, Tp. 14 N., R. 4 E., at the rate of \$2 per acre.

We recommend that the land be sold for \$5 50 per acre, cash. If not paid within thirty (30) days he must vacate the land. [Concurred in, January 18, 1890.]

We recommend that A. Flint's application to purchase land covered by location No. 222, and lying in San Luis Obispo County, for \$2 per acre, be declined. [Approved, January 18, 1890.]

Application for Patents.

We recommend that the application of Charles Faulkner for a patent on a portion of the land in locations 421 and 421 $\frac{1}{2}$, purchased from the Regents of the University of California, be denied. [Concurred in, November 12, 1890.]

Your Land Committee reports on the application of the Sierra Lumber Company as follows: On the documents submitted in this matter it appears that the rights of applicants for the land from the Regents having been acquired by the Sierra Lumber Company, we recommend that patents for such lands be issued to such corporation upon the payment of all indebtedness on account thereof. [Adopted, May 27, 1890.]

13. RELATING TO THE ANNUAL BUDGET.

Addition to the Budget of 1889-1890.

We recommend that \$130 be added to the budget of the Department of Physics, Associate Professor Slate in charge. [Report of Finance Committee; concurred in, November 12, 1889.]

An additional appropriation is needed for equipment and repairs. We recommend that \$400 be appropriated. [Report of Finance Committee; recommendation concurred in, April 8, 1890.]

We recommend that the sum of \$500 be added to the apportionment for equipment and repair for the current year. [Report of Finance Committee; concurred in, December 10, 1889.]

Budget of the Year ending June 30, 1891.

The Committee on Finance and Audit have the honor to report that the estimated income for the fiscal year ending June 30, 1891, is as follows:

Interest on State bonds (\$66,000, matures June first)	\$45,090 00
Interest on San Francisco Park and Avenue Improvement bonds	3,000 00
Interest on San Francisco City and County School bonds	1,800 00
Interest on San Francisco Park Improvement bonds	60 00
Interest on Marin County bonds	3,500 00
Interest on Santa Clara County bonds	210 00
Interest on Alameda School bonds	180 00
Interest on Fresno County bonds	875 00
Interest on Kern County bonds	1,060 00
Interest on Plumas County bonds	540 00
Interest on Tehama County bonds	1,475 00
Interest on diverted funds	4,785 00
Interest on mortgages	48,201 12
Interest from deposits in savings banks	5,461 04
Interest on deferred payments for lands	1,686 82
Interest on forfeited seminary lands	22 40
Land fees	250 00
Rents: Cottages, \$1,560; Palmer House, \$720	2,280 00
Chemical Laboratory	1,260 00
Mining Laboratory	100 00
Physical Laboratory	175 00
State University Fund (1 cent tax)	101,738 78
Consolidated Perpetual Endowment Fund, available for investment, \$102,629 68 (including \$66,000 State bonds), of which, say \$80,000, constantly invested at 6 per cent	4,800 00
Special Funds, \$4,279 74, at 6 per cent	256 78
Estimated income (gross)	\$228,796 94
Deduct—	
Interest on Mills Endowment	\$5,290 76
Interest on Reese Library Fund	3,062 50
Interest on Tompkins Endowment	42 50
Interest on Medal Fund	180 00
Interest on Pioche Donation	129 60
	8,705 36
Net estimated income	\$220,091 58

Budget Estimated Disbursements, 1890-91.

Fuel	\$1,000 00
Equipment and repairs	5,000 00
Advertising and printing	300 00
Telegraphing and expressage	500 00
Stationery	250 00
Postage	720 00
Land administration	250 00
Incidental expenses and extra clerk hire	1,000 00
College celebrations	350 00
Official and lecturing expenses	1,000 00
Cottage repairs	500 00
Water (reduced from \$5,000)	2,000 00
Insurance (reduced from \$600)	300 00
Agricultural Department	8,000 00
Engineering and Astronomy	400 00
Chemistry and Chemical Laboratory	2,400 00
Mechanics	300 00
Mines	300 00
Mineralogy	300 00
Military	300 00
Physics and Physical Laboratory	1,000 00
Physical Culture, Gymnasium, and Track	1,500 00
Lick Observatory	5,000 00
Library: Binding (\$800), Periodicals (\$1,200), Prof. Moses (\$500)	2,500 00
Museum (\$600), mountain goats and freight (\$120)	720 00
University Printing Office	500 00
University site improvements (\$13,000), campus (\$2,000)	15,000 00
Amount carried forward	\$51,390 00

Amount brought forward.....	\$51,390 00
Chemical Laboratory Building (\$8,000), fitting up (\$12,000)	\$20,000 00
Magazine for powder and oils, etc.	1,600 00
Botanical specimens preservation (\$1,250, less State Geological Survey Fund)	1,000 00
Salaries of Professors, etc.	145,099 48
	167,699 48
Less—	
Mills Professorship.....	\$4,000 00
Paid by U. S. A. E. S. Fund.....	4,720 00
	8,720 00
	\$210,369 48
Five per cent on income (\$220,091 58)	11,004 58
	\$221,374 06
Total estimated income	\$220,091 55
Total estimated disbursements	221,374 06
Apparent deficiency.....	\$1,282 51

Most of the budget items of disbursements are based on the experience of previous years; we note, however, the following exceptions:

Physical Culture and Gymnasium, \$1,500. About \$2,175 were required in 1889-90, part of which was for apparatus, etc., not needed in 1890-91, but a running track is demanded in the gallery of the gymnasium building.

Lick Observatory, \$5,000. Heretofore \$3,600 has been appropriated, but many buildings need painting, stone walls repairing, and sundry other immediate requirements call for the additional item of \$1,400.

Library, \$2,500. One thousand dollars heretofore recommended will be insufficient, \$800 being required for binding, \$1,200 for periodicals, and \$500 recommended by Library Committee for the purchase of special books by Professor Moses.

Museum, \$720. In addition to the usual amount of \$600, \$120 authorized by the Board for completing the mounting of a mountain goat and freight charges.

University site improvements, \$15,000. The Chairman of Committee on Grounds and Buildings estimates two bridges, \$900; ten dams, \$3,000; pavement, \$3,500; drain pipes, \$1,640; lumber, \$200; labor, \$4,500; and the cost of putting the campus in order is estimated at \$2,000; total, \$15,740.

Chemical Laboratory and fitting up, \$20,000.

Amount deposited in bank for building	\$55,000 00
Amount appropriated in above.....	8,000 00
Total	\$63,000 00
Contract for construction	\$56,450 00
Extras allowed by Board.....	3,910 00
Architect's fees	3,018 00
Total	\$63,378 00

The committee thought that for fitting up the Laboratory, moving, etc., \$12,000 was sufficient—all that could be allowed for the first year.

Magazine for combustibles, \$1,600. The safe storage of explosives and inflammables commends itself to the favorable consideration of the Board as it has to the committee.

Botanical specimens, etc., \$1,000. The great and valuable collections left by the State Geological Survey, we are assured, need prompt atten-

tion in order to preserve them from decay and ruin, and the estimated cost of preserving and arranging them is \$1,300, of which \$250 is in the hands of the Regents from the State Geological Survey Fund. We submit the matter without recommendation.

Numerous other demands received the consideration of the committee, which were denied for want of funds, the most important of which, the proper arrangement in fire-proof vaults of the papers and archives of the University and of the Secretary's office, demands prompt attention.

On motion, \$1,000 was inserted in the budget for the preservation of botanical specimens.

Salaries, \$136,379 48.

Paid for month of April, \$11,995 79, and fixed by the Board, equal to per annum	\$143,949 48
Deducting amounts paid by special funds	8,720 00
	\$135,229 48

The following additions and changes have been recommended by the committee, or occur from changes in the personnel of the educational staff:

Professor Kellogg, returning	\$3,000 00
Less Professor Howard, retiring.....	2,400 00
	\$600 00
Instructor Senger, increase	100 00
Assistant in Department of Astromomy, nine months, at \$20	180 00
Richards, fireman, increase	120 00
Bouse, armorer.....	150 00
	\$1,150 00

United States Agricultural Experiment Stations:

<i>Receipts, 1890.</i>	
From the United States.....	\$15,000 00
<i>Disbursements.</i>	
Salaries	\$4,840 00
Labor	3,200 00
Buildings.....	400 00
Chemical apparatus and supplies	250 00
Furniture	150 00
Fencing and drainage.....	100 00
Freight and expressage	500 00
Incidentals	250 00
Postage and stationery	300 00
Printing	200 00
Supplies	1,100 00
Tools, implements, and machinery	150 00
Scientific instruments	150 00
Traveling	750 00
Water supply	250 00
Unappropriated, subject to decision of Board	2,410 00
	\$15,000 00

The committee has had sixteen meetings, has considered applications for loans, and has audited and examined a large number of vouchers during the year.

The budget, its recommendations and suggestions, as amended, were adopted. [May 27, 1890.]

14. FRANK J. WALTON MEMORIAL FUND.

BERKELEY, January 8, 1889.

To the honorable the Board of Regents of the University of California:

The graduates of the Class of '83 have raised a fund of about \$1,800, to be called the Frank J. Walton Memorial Loan Fund, which they wish to place in your hands as a loan fund for undergraduates, and they respectfully request your honorable body to appoint a committee to consult with the undersigned in regard to the matter.

Respectfully,

JOHN H. HANSEN,
GUY C. EARL,
WALTER COPE,
IDA D. BENFEY,
F. L. BURK,
Committee from Class of '83.

In the matter of the Frank J. Walton Memorial Loan Fund, referred to the Finance Committee at the meeting of the Board held January 8, 1889, your committee recommends the adoption of the following:

The Board of Regents accepts from the members of the Class of '83 the sum of eighteen hundred (\$1,800) dollars, to be held in trust for the purposes hereinafter specified. The fund is to be known as the Frank J. Walton Memorial Loan Fund. It is to be invested by the Regents, and the income only to be loaned to the undergraduate students in the Academic Department at Berkeley, who are studying for degrees, and who have finished half their undergraduate course. The beneficiaries shall be selected by a committee, consisting of the President of the University and two members of the Academic Council, who shall be chosen by the Council for a term of three years. The choice of beneficiaries shall not be made on the ground of scholarship, but shall depend on general character and promise. The amount of the loan to each beneficiary, the term of the notes, and the question of interest, shall be left to the discretion of the said committee. The committee shall report to the Finance Committee of the Regents all receipts and disbursements on account of the fund. The promissory notes of beneficiaries shall be deposited in the office of the Secretary of the Board of Regents, but the names of the beneficiaries shall not be made public. Repayment to beneficiaries and the unused interest shall be reported to the Finance Committee, and added to the principal, and be invested by the Board of Regents. The amounts due beneficiaries shall be paid upon special requisition, signed by the committee and indorsed by the Finance Committee.

In vouchers submitted to the Board of Regents, the names of the beneficiaries shall not be inserted, and in their place shall be placed the names of the members of the Committee of the Faculty, or a majority thereof.

Whenever the repayments with the original fund shall exceed the sum of \$20,000, the committee may, in their discretion, establish out of the surplus, scholarships for undergraduates, or graduates pursuing studies at Berkeley, or make special loans for the use of graduates. [Adopted, November 12, 1889.]

15. THE CUSTODY OF PAPERS.

We recommend the adoption of the following rule as to the custody of papers relating to loans: "In all cases where loans are made, that the mortgage note be deposited with the Treasurer; that the application, the report of the expert, the abstract of title, the opinion of the attorney, and the mortgage be deposited with the Secretary." [Report of the Finance Committee; concurred in, February 11, 1890.]

16. GEOLOGICAL SURVEY MATERIAL.

President Davis, on behalf of the special committee to which was referred the report of the sub-committee on the Geological Survey material, reported as follows: Your committee to whom was referred the report of Messrs. Bonté, Le Conte, Soulé, Christy, and Jackson, on the Geological Survey material, beg leave to report that they indorse the recommendations contained in that report, and further recommend that—

1. That the Secretary be instructed to prepare a suitable case to hold the material; and,

2. The counsel of this Board be requested to prepare a memorial to be presented to the next Legislature, and the draft of a bill donating all this material and property to the University. [Adopted, February 11, 1890.]

The report of the committee will be found in the appendix of this report.

17. RELATING TO WATER SUPPLY.

Wells.

Regent Bartlett offered the following resolution:

Resolved, That the sum of \$1,000 be and the same is hereby appropriated and placed in the hands of the Chairman of the Committee on Grounds and Buildings and other property, to be used and expended under the direction of said committee in sinking wells, and in other ways exploring for water on the grounds of the University at Berkeley. [Adopted on a call of the ayes and noes, November 12, 1889.]

About fifty wells have been bored varying in depth from fifty to eighty feet. The results are not encouraging. One well will probably yield about eight hundred gallons per day.

Condemnation of Water Sources.

Resolved, That the attorney of the Board be instructed to inquire and report his opinion as to what springs or water sources can be condemned for the benefit of the University under an Act entitled "An Act to provide a supply of water for the University," etc. (Stats. of Cal. 1875-6), and under the general law. [Report of Committee on Water Supply; adopted, December 10, 1889.]

Pollution of Water.

It appears from the maps and papers hereto attached, that the water heretofore taken from Strawberry Creek for the use of the University

has been and is now being polluted by the establishment of cattle corrals on the branches thereof, above the point where it is taken out of the bed of the creek for use; to such an extent as to render the same unfit for and dangerous to be used; that it has been necessary to discontinue the use of said water on account of said pollution, and the flow of said stream is now turned into the said creek and running to waste, while the University is obliged to buy water for domestic use.

In view of these facts your committee respectfully recommends the adoption of the following resolution:

Resolved, First, that the maps, papers, and report of the Committee on Water Supply be transmitted to the counsel of the Board, and that the counsel be and he is hereby instructed, on behalf of the Regents of the University of California, to commence legal proceedings for damages, and to abate or restrain any nuisance caused by fouling the waters of Strawberry Creek, or other waters naturally flowing to and upon the grounds of the University at Berkeley, against any or all parties causing such damage and nuisance.

Second—That said counsel is also authorized to take appropriate action on behalf of the Regents of the University of California, to prevent the Alameda Water Co., or others, from diverting the waters of said creek. [Report of Committee on Water Supply; adopted, December 10, 1889.]

The dairy causing the pollution of the water of Strawberry Creek was removed, and the winter rains washed out most of the filth complained of.

Reservoir.

Regent Hallidie offered the following resolution:

Resolved, That the Committee on Water Supply is hereby instructed to have an examination of the proposed reservoir site on Strawberry Creek made by a competent engineer, and, if in the opinion of the committee and the engineer the proposed site is adapted for such a reservoir, and the same can be safely constructed with a capacity of three million gallons, the committee is hereby authorized to proceed with the construction of the same, at a cost not to exceed \$3,000. [Adopted, December 10, 1889.]

Report of Engineer J. J. Cloud on Sites for Reservoirs.

Regent Phelps, Chairman of Special Committee on Water Supply, submitted the following report of engineer J. J. Cloud:

Hon. T. G. PHELPS:

DEAR SIR: As requested by you, I have made a cursory examination of certain proposed sites for reservoirs for the storage of water, near the State University buildings at Berkeley, from which examinations I deduce the following results: The first site examined by me is situated on the westerly slope of the hill, between one fourth and one half mile easterly from the main buildings of the University, at which point a basin can be made with a capacity of three million gallons. In order to store the above stated quantity, an embankment of seventeen feet in height will have to be constructed, which embankment would contain eight thousand seven hundred and fifty cubic yards of material. To form the basin, the amount of excavating required would be nine thousand three

hundred and seventy-two cubic yards, the amount to be excavated being slightly in excess of the amount to be used in the construction of the embankment.

The material to be obtained for the construction of the embankment is not of a first class quality, still, by using great care and discrimination in the selection of the same, and by using the best of it for the in or water side of the embankment, and by constructing a puddle-pit, say six feet wide throughout the embankment, I have no doubt but that a safe reservoir can be constructed. The elevation of the site under consideration is not sufficient to furnish water for fire purposes for all the buildings at the University, namely, the Mechanic Arts and Library buildings, but for the North and South Halls and the Viticultural building the elevation is amply sufficient. The cost of the construction of said reservoir would approximately be as follows:

Embankment puddle-pit, 1,610 cubic yards, at 50 cents.....	\$805 00
Main portion of embankment, 7,140 cubic yards, at 30 cents.....	2,142 00
Excavation in excess of quantity for embankment, 622 cubic yards, at 30 cents.....	186 60
Sand box.....	200 00
Supply pipe from creek to reservoir.....	1,200 00
Laying pipe, and ditch for same.....	150 00
Discharge pipe and gate.....	125 00
Total.....	\$4,808 60

I have also made surveys of two other points for reservoir purposes, but find that the excavations would be so great, in comparison to the capacity to be obtained, that I scarcely consider them worthy of your attention.

However, as I have obtained the data, you might wish to take it into consideration. I will give the result of the more favorable of the two. The point selected is on the southerly slope of the hill on the northerly side of Strawberry Creek, a short distance below the point where the large well was sunk about two years ago. At this point a basin can be excavated, and inclosed by an embankment of the capacity of five million five hundred and ninety-nine thousand three hundred and fifty-seven gallons, at the following expense:

Excavation—37,350 cubic yards, at 30 cents.....	\$11,205 00
Puddle-pit—1,650 cubic yards, at 50 cents.....	825 00
Incidentals.....	500 00
Total.....	\$12,530 00

The last place examined would be so expensive that I do not consider it worthy of your attention. The great expense attending the construction of sidehill reservoirs, as you are aware, increases as the steepness of the hill to be excavated becomes greater, so that on steep hillsides a large amount of excavation is required to obtain a small amount of storage capacity. I would respectfully represent to you that there is one site on the southerly side of Strawberry Creek, where a small reservoir could be constructed at a comparatively small expense, which would furnish water at an elevation great enough for fire purposes for all the buildings of the University. This site is on the land belonging to the University, and would take the place of the small reservoir which is now used, but is not on University property.

In consideration of the unfavorable facilities offered for the construction of hillside reservoirs, on account of the conformation of the ground,

the side hill being so steep, I would recommend that if it is possible to secure all of the rights required, that a reservoir be constructed on Strawberry Creek, and a basin formed by the construction of a dam across said creek at the most favorable point to be selected. I have not all the data necessary to give a detailed or complete exhibit of the cost of such a work, but I have made such examinations as will warrant my saying that storage for a given amount of water can be secured at one half the expense in the natural basin of the creek than it can be in hill-side reservoirs. By the construction of a dam at the most advantageous point of said creek, a basin that will store from twelve to fifteen million gallons can be secured at a cost not exceeding from \$10,000 to \$12,000, and in this estimate I include the cost of the following plan: I would construct a small dam up said creek above the point in said creek to which the dam would flood the basin, and take the water out at that point by a flume, and carry the same along the side hill for a certain distance, allowing the water when carrying matter in solution to any great extent to pass through a sand box or filter, and then allowing the water to enter the reservoir. The flume I would construct of such capacity that it would carry all the water that runs in said creek during the largest storms. At such times I would allow the water to run past and enter the natural channel of the creek below the dam. By thus not permitting the water to enter the reservoir at the time when it is carrying a large amount of matter in solution, there would be no danger of the accumulation of any appreciable amount of sediment in the reservoir, and no question as to a wasteway would have to be taken into consideration, as the flume used to carry the storm water could at all times be utilized and no water allowed to enter the reservoir unless so desired.

I do not give any cost for distributing pipes, as a general system will have to be adopted, and since I have been engaged in this work, although there has been considerable time expended owing to the inclemency of the weather, I have not been able to do much instrumental work. As to the pipes necessary to carry out any of the work herein specified, there would be no pressure sufficient to try the strength of any ordinary pipe that would naturally be used in such work. I would also have liked, had the weather permitted, to have made several more surveys and taken levels, as I think I could have furnished you a more satisfactory report.

Yours respectfully,

J. J. CLOUD.

Regent Houghton moved that \$5,000—or so much thereof as may be needed—be appropriated for the construction of a reservoir, and that the committee be authorized to proceed with the work. [Carried, January 18, 1890.]

Services of Engineer.

We present the bill of W. G. Raymond for \$11 50, for surveying and making maps of property on Strawberry Creek. Mr. Raymond is an officer of the University on the salary roll, and it is the opinion of your committee that officers of the University should render any services specially required of them without charge therefor. (Report of the Finance Committee.)

Six dollars and fifty cents allowed for assistants. [January 18, 1890.]

18. REPORTS OF THE SPECIAL COMMITTEE AND THE COMMITTEE ON GROUNDS AND BUILDINGS ON THE ERECTION OF A NEW CHEMICAL LABORATORY.

Plans and Specifications.

Regent Hallidie, Chairman of the Committee on the Erection of a New Chemical Laboratory, presented the plans and specifications for the construction of the Chemical Laboratory, and moved that the whole matter be referred to the Committee on Grounds and Buildings, with instructions to advertise for bids for the construction of the whole building, according to the plans submitted, and to submit a report at the next meeting.

Carried, and the special committee was discharged. [June 25, 1889.]

Bids and Contract.

In conformity with authority from the Board of Regents, the Committee on Grounds and Buildings advertised for proposals for the construction of the new "Chemical Laboratory" at Berkeley, according to plans and specifications prepared by Clinton Day, architect, which had been previously submitted, considered, and adopted by this Board, calling for bids to be received at the office of Clinton Day, architect, 220 Sutter Street, on the twenty-eighth ult., at twelve o'clock noon of said day. At the appointed hour your committee were present, when eleven (11) bids were received, and numbered one to eleven, inclusive, and were opened in numerical order. One bid, that of J. Warren, was refused by the committee, being presented after the expiration of the noon hour. The bid of Robert Smilie, No. 2, was duly opened and considered; no bond or check accompanied the bid; at about twenty-five minutes past twelve o'clock, Mr. Smilie presented a bond, which instrument, upon examination by the committee, was pronounced insufficient and irregular in form, having but one bondsman, and not being filed within the legal time was excluded. Herewith find original list of all bidders, with amounts of each bid filed, showing a difference between the highest and lowest bids of \$26,543.

The lowest bid is that of Robert Smilie, being \$53,435, but for the reasons above stated, your committee declined to consider it.

First—Your committee would therefore recommend the acceptance of the next lowest bid, No. 11, that of R. Mitchell, for the sum of \$56,445, and that the contract be awarded to him.

Second—That the Secretary be instructed to indorse back all checks, and return all bonds to the respective bidders, except that of R. Mitchell, the lowest regular formal bidder.

Third—That the Committee on Grounds and Buildings be herewith authorized to enter into contract with said R. Mitchell for the construction of said building, "The Chemical Laboratory of the University of California," for the sum of \$56,445.

List of Bids.

1. Butler & McGowan (with check).....	\$63,495 00
2. Robert Smilie (with bond).....	53,435 00
3. E. W. Lewis & Co. (with bond).....	79,978 00
4. J. H. Mackay (with bond).....	63,700 00
5. Robert Higgins (with bond).....	70,600 00
6. J. G. & J. N. Day (with bond).....	62,378 00
7. J. J. Conrad (with bond).....	60,500 00
8. M. Carthy (with bond).....	63,920 00
9. Richardson & Gale (with bond).....	63,300 00
10. R. W. Kittnan (with bond).....	58,000 00
11. Robert Mitchell (with bond).....	56,445 00

On motion, adopted, and contract awarded to Robert Mitchell. [September 10, 1889.]

Employment of a Superintendent.

The contractor is now laying the foundation of the new Chemical Laboratory building. We recommend that the Committee on Grounds and Buildings be authorized to employ a Superintendent to supervise the erection of this building. Cost, not to exceed \$150 per month. [Concurred in, November 12, 1889.]

Your Committee on Grounds and Buildings report that they have appointed J. P. Baudin Superintendent of Construction in the erection of the Chemical Laboratory building, in accordance with the resolution of the Board, adopted November 12, 1889. Said appointment to date from November 13, 1889. Salary, \$150 per month, as per order of the Board.

Action of the committee approved. [December 10, 1889.]

Changes in Plans.

Regent Martin, Chairman of the Committee on Grounds and Buildings, reported that certain changes were necessary in the basement of the proposed building. He also submitted a drawing showing the changes needed; also an itemized statement by the architect, Clinton Day, and a bid from the contractor, Robert Mitchell, offering to do the required work for the sum of \$1,695.

Recommendation concurred in and the sum appropriated. [December 10, 1889.]

Regent Hallidie submitted the following statement of the architect as to the cost of the proposed changes in the Chemical Laboratory:

Balance of the amount already allowed by the Board, December 10, 1889.....	\$1,090 00
Strengthening the wall.....	275 00
Two windows in the octagon.....	100 00
Enlarging flues.....	180 00
Lengthening eighteen windows.....	180 00

Total additional expense to be incurred.....\$1,825 00

Regent Bartlett moved that the proposed changes be approved by the Board, and that \$2,000, including \$1,645 of the appropriation of Dec. 10, 1889, be allowed to cover the cost of alterations to be made by order of the Committee on Grounds and Buildings. [Carried, February 11, 1890.]

The new Chemical Laboratory is rapidly approaching completion, and we have reason to hope that the building may be occupied by the opening of the new academic year. Your committee makes the following recommendation: That copper instead of tin be used in completing

the gutters, valleys, and flashings of the roof. The extra cost will be \$1,290. [Concurred in, May 13, 1890.]

Professor Rising on the Equipment of the New Chemical Laboratory.

The construction of the new Chemical Laboratory, with increased and better accommodations, brings with it the question of equipment. It would be a proud announcement to make to the young men of the State that they can find as good laboratory facilities here as elsewhere. This announcement, I think, can be truthfully made when the building now in construction shall have been suitably furnished. We will then be able to add to our present accommodations laboratory facilities in the following subjects:

I. *Elementary Chemistry.* This opportunity for laboratory practice will be of great advantage to the teachers of the State, and they in turn will be able to successfully introduce and teach this subject in the lower schools. In this way we may in a few years be relieved from this work altogether. I think we can soon offer a summer course to teachers.

II. *Organic Chemistry.* Up to this time the study of this subject has been carried on under great disadvantages. With a special room set apart for this work, and with special apparatus and an assistant in charge, there will be a new interest in the subject. It includes the practical and important industries connected with fermentation, dyeing, sugar manufacture, etc.

III. *Physiological Chemistry.* This subject is of great importance, especially to those who are preparing to study medicine. It will include bacteriological studies, with special application to water analysis, toxicology, food analysis, etc.

IV. *Gas Analysis.* The completion of the laboratory will make it possible, for the first time in the history of this coast, to make a complete analysis of burning gas. It will then be easy to analyze the many gases which are found on this coast. A series of air analyses would be of great interest.

Better facilities will be offered in the following subjects:

(a) Volumetric analysis.

(b) Spectrum analysis.

(c) Exercises with polarized light, including practice in sugar analysis.

(d) Electrolytic analysis, including practice in the precipitation and separation of metals and electroplating.

A *Chemical Museum*, on a somewhat larger scale, is now made possible. Here will be collected waste products and by-products of chemical manufacture, raw materials, samples illustrating various steps in the process of manufacture. The value of such a collection to students studying chemical manufactures is very great; many persons actually engaged in these manufactures will be interested and profited by such a collection. This museum or collection must be got together through the energy and skill of those in charge of the departments, as it cannot be bought—it must grow.

I have emphasized the importance of equipping the new laboratory with its new departments and museum in such a manner as to get the greatest possible good from them. This involves great responsibility; we need the experience of other institutions and the advice of the best

educators. The suggestion has come to me, again and again, that it would be a great gain to the University if a representation of the Department of Chemistry could visit the best laboratories of this country and Europe and report their experience, advice, and suggestions. We need this assistance, both for the equipment and for the purchase of new apparatus needed in the new departments above described. We want to buy the best apparatus, of the best makers, and at the lowest prices. The estimated cost of new apparatus to furnish the new departments with something to start the museum would be \$5,000.

I would like personally to undertake this work, and would be willing to visit the laboratories connected with the following institutions: Michigan University, Ohio State University (new chemical laboratory in construction, cost \$75,000), Cornell University (new laboratory there also, building cost \$80,000), Johns Hopkins, University of Pennsylvania, Princeton, Columbia, Yale, Harvard, University and Salisbury Laboratory (both in Worcester, Massachusetts, and both new); also the laboratories connected with the following foreign universities: Berlin, Leipsic, Bonn, Heidelberg, Strassburg, Aix-la-Chapelle, Munich, Zurich, Vienna; the important laboratories of France, including Paris, and of England, especially those connected with Oxford and Cambridge, and the Victoria University, and perhaps also Edinburgh and Dublin. I would be willing to bear one half of the expense if the University could bear the other half, which could be limited to, say, \$600. I would do all I could to collect suitable specimens for the museum. I would report to Berkeley frequently so that my suggestions could be acted upon. I would furnish lists of the best apparatus, prices and makers. When purchases are made advantage can be taken of this advice. I would use the time and opportunity to improve myself and to perform the service assigned me to the very best of my ability. Continued ill health compels me to ask for a leave of absence for the remainder of the term. My physician says that I have not recovered my usual health and vigor since my severe illness last fall, and that rest (with travel if possible) is necessary. I feel certain that I can best serve the University by carrying out the programme above outlined. I would return in time for the fall term.

Respectfully submitted.

W. B. RISING.

BERKELEY, March 19, 1890.

Professor Rising Detailed to Examine Laboratories.

Regent Hoitt moved that Prof. W. B. Rising be detailed to visit the several chemical laboratories of America and Europe, with a view to the proper equipment of the new Chemical Laboratory at Berkeley, and that \$600 be appropriated to cover the expenses of his investigations. [Carried, April 8, 1890.]

Furniture and Fittings.

We recommend that furniture and fittings for the new laboratories be made according to plans and specifications herewith submitted, cost not to exceed \$6,000. [Concurred in, May 13, 1890.]

May 27, 1890, the Board appropriated \$6,000 for the purchase of furniture and fittings for the new Chemical Laboratory. Your committee

advertised for proposals, to be opened June 18, 1890, at 12 m. Only one bid was received. R. M. McKillican offered to do the work according to plans and specifications for the sum of \$7,921. The bid was accompanied by a certified check covering 10 per cent of the bid, as required by law.

On motion, ordered that the bid be rejected, and that the committee advertise for bids. [June 24, 1890.]

Purchase of Apparatus, etc.

Professor Rising submits requisitions for glassware, apparatus, and chemicals, amounting to \$1,800. It is necessary to order these goods in advance fifteen or eighteen months.

We recommend that the requisitions be approved, and purchase ordered of said materials, payable out of the budget apportionment for the year in which they shall be received. [Concurred in, January 18, 1890.]

We recommend that a sum, not to exceed \$1,000, be appropriated for the immediate purchase, in Germany, of apparatus, glassware, and fittings, for use in the new Chemical Laboratory; and also, that \$400 be appropriated for the purchase of apparatus and fittings in New York. [Concurred in, May 13, 1890.]

19. REMOVAL OF THE DEPARTMENT OF PHYSICS TO SOUTH HALL.

President Davis reported that the following section of the report of the Finance Committee had been referred to him:

"It will be necessary to place the Department of Physics in South Hall as soon as the Chemical Department can be removed to the Chemical Laboratory, now in process of construction, and it will be desirable to obtain information as to the best methods of fitting up the quarters to be used by the Department in South Hall. Associate Professor F. Slate offers to bear half the expense of an investigation of the improved methods of fitting up Physical Laboratories, now in use in eastern institutions, and to give his entire summer vacation to that work. The cost of such an investigation will be \$500. We recommend that \$250 be appropriated to enable Mr. Slate to make the needed investigations during the coming summer vacation."

He begged leave to report back the recommendation of the Finance Committee, and recommended that it be concurred in. [Concurred in, March 11, 1890.]

20. THE WM. ASHBURNER MEMORIAL CLOCK.

Regent Hallidie presented the bill of Robert McKillican for placing the Ashburner Clock in the tower of the Bacon Art and Library building, amounting to \$566 84, and stated that the bill was \$66 84 in excess of the appropriation. He recommended that the bill be paid. [Concurred in, March 11, 1890.]

Regent Houghton presented the report of the special committee appointed to place the Wm. Ashburner Memorial Clock, as follows:

Your special committee, appointed to place the Wm. Ashburner

Memorial Clock, begs leave to report that the clock is now in place. Mrs. Ashburner met the committee Saturday, March 15, 1890, in the library reading-room, and formally turned over the clock to the Regents of the University. Mrs. Ashburner also placed in the hands of your committee the following papers, which were placed on file in the Secretary's office.

1. The receipt and guarantee of the Seth Thomas Clock Company, as follows:

To the Board of Regents of the University of California:

GENTLEMEN: We hereby certify that all charges due to us for the furnishing and erecting of the Memorial Clock at the University of California have been paid, and we further acknowledge a guarantee to Mrs. Ashburner of the successful working of the clock (accidents excepted) for five years from this date.

SETH THOMAS CLOCK COMPANY,
HENRY MOLINEAUX, Manager.

Dated March 15, 1890.

2. A policy of insurance for \$2,000, running three years, covering the clock and bell, including all appliances and fixtures.

The following inscription is cast in the bell: "Memorial of William Ashburner."

The weight of the movement is one thousand pounds; of the pendulum ball, one hundred and thirty-five pounds; of clock weights (time side), seventy-five pounds; of strike, seven hundred pounds; of bell, one thousand five hundred and sixty-eight pounds; of the hammer, thirty-five pounds. The size of the dial is five feet four inches; the drop for weights is thirty-five feet in length.

Your committee begs leave to submit the following resolutions:

Resolved, That the Board of Regents gratefully accepts the valued gift of Mrs. Ashburner.

Resolved, That the Board of Regents hereby expresses great pleasure in receiving a gift that will perpetuate the remembrance of the distinguished services of the late Regent Wm. Ashburner, on behalf of the University.

Report and resolutions adopted.

Ordered, that a copy of the resolutions be forwarded to Mrs. Ashburner. [April 8, 1890.]

21. INVENTORY OF CONTENTS OF BUILDINGS.

An inventory was made by the Secretary and Professors in 1882. Your committee requests instructions from the Board as to whether a new one shall be made.

Regent Houghton moved that an inventory be taken of the contents of the buildings at Berkeley. [Carried, January 18, 1890.]

22. CONVEYANCE TO H. D. COGSWELL.

Regent Marye presented the following communication from the Trustees of the Cogswell Polytechnical College:

SAN FRANCISCO, September 9, 1889.

To the honorable the Board of Regents of the University of California:

DEAR SIRS: As a member of the Board of Trustees of the Cogswell Polytechnical College I received a deed, made by your honorable Board to Dr. H. D. Cogswell, of the property located on the corner of Front and Clark Streets, in this city, it being the same piece of property that Dr. Cogswell had deeded to the Board of Regents under date of May 19, 1879, and redeeded to him by your honorable Board, as per decision of Judge Hunt in case of Cogswell vs. The Regents, Decree No. 15,509, as the same is shown on pages 95-6-7 of the annual report of the Secretary of the Board of Regents for the year ending June 30, 1887.

The Trustees of the Cogswell Polytechnical College were authorized to sell this property to provide funds to furnish the school building erected under the terms of the trust. We effected the sale of the property on condition that the buyer could secure a loan of \$20,000. The abstract of this property and the unrecorded deed was placed in the hands of the attorneys for the Hibernia Bank.

During the time that such attorneys had this matter under consideration, this unrecorded deed was mislaid or lost, and after diligent search cannot be and has not been found.

I hand you with this my affidavit to this effect, a resolution authorizing your President and Secretary to issue a new deed and a deed of the property in question, all of which have been prepared under the supervision of counsel of the Board, Hon. J. B. Mhoon.

The Cogswell Trustees are sadly in need of money to be derived from this sale, inasmuch as they are now paying interest on the amount to the bank. I therefore have the honor to request that your honorable body authorize your President and Secretary to execute and deliver the deed herewith at your earliest convenience.

I am, gentlemen, your obedient servant,

C. B. STONE,

Trustee and Treasurer of Cogswell Polytechnical College.

STATE OF CALIFORNIA, }
City and County of San Francisco. } ss.

C. B. Stone, being first duly sworn, deposes and says that he is one of the Trustees of the Cogswell Polytechnical College; that a certain deed dated the fourteenth day of July, 1887, executed by the Regents of the University of California, a corporation, to Henry D. Cogswell, conveying to said Henry D. Cogswell all that certain lot, piece, or parcel of land situate, lying, and being in the City and County of San Francisco, State of California, and particularly described as follows, to-wit: Commencing at a point on the easterly line of Front Street, distant sixty (60) feet northerly from the northeast corner of the intersection of Front and Jackson Streets; thence northerly along said easterly line of Front Street sixty (60) feet to Clark Street; thence at right angles easterly and along the southerly line of Clark Street eighty-five (85) feet to and including the brick wall, and the land on which stands the wall, which now constitutes the rear or easterly wall of the building erected on the premises hereby conveyed; thence at right angles westerly and parallel with Jackson Street eighty-five (85) feet to the easterly line of Front

Street and point of commencement, was delivered to him as such Trustee of the Cogswell Polytechnical College; that said deed was never placed of record in the office of the County Recorder of the City and County of San Francisco, and since the delivery thereof the same has been lost. And affiant further says that he has made and caused to be made diligent search for said deed, but the same has not been and cannot be found.

C. B. STONE.

Subscribed and sworn to before me this seventh day of September, 1889.

[SEAL.]

JAMES L. KING,
Notary Public.

Resolution of Conveyance by the Board.

WHEREAS, In accordance with the decree of the Superior Court of and for the City and County of San Francisco, in favor of plaintiff and against defendants in the cause, in said Court, and Department No. 5 thereof, entitled, Henry D. Cogswell, plaintiff, vs. The Regents of the University of California, a corporation, by virtue of a resolution adopted therefor, made, executed, and delivered to the said Henry D. Cogswell a good and sufficient deed of conveyance of the real property in the said decree described, which said deed was dated the fourteenth day of July, A. D. 1887, and was duly acknowledged, so that it might be recorded in the office of the County Recorder, of the said City and County of San Francisco; and, whereas, the said deed was never placed of record in the office of the said County Recorder, and since its delivery has been lost, and after diligent search cannot be found; therefore, be it

Resolved, That the President and Secretary of the Board of Regents, in the name and under the corporate seal of the "Regents of the University of California," execute and deliver to H. D. Cogswell a conveyance covering the property heretofore, to wit: May 19, 1879, conveyed by said Cogswell to the Regents of the University of California, in the place of said lost deed, as the same is described in the said deed from said Cogswell to said Regents, in the form to be approved by the attorney of the Board of Regents, substantially as follows, to wit:

This indenture, made the — day of September, in the year of our Lord one thousand eight hundred and eighty-nine, between the Regents of the University of California, a corporation, the party of the first part, and Henry D. Cogswell, the party of the second part, witnesseth: That whereas, a certain deed of indenture, bearing date the fourteenth day of July, A. D. 1887, from the party of the first part to the party of the second part, of the premises hereinafter described, has been lost, and after diligent search cannot be found; now, therefore, the said party of the first part, for and in consideration of the sum of one dollar, coin of the United States of America, to it in hand paid by the said party of the second part, the receipt whereof is hereby acknowledged, and pursuant to a decree of the Superior Court of San Francisco, Department Five, entered in the case of H. D. Cogswell vs. The Regents of the University of California, on the eighth day of February, 1887, has remised, released, forever quitclaimed, and by these presents does remise, release, and forever quitclaim unto the said party of the second part, and to his heirs

and assigns, all that certain lot, piece, or parcel of land situate, lying, and being in the City and County of San Francisco, State of California, and particularly described as follows, to wit: Commencing at a point on the easterly line of Front Street, distant sixty (60) feet northerly from the northeast corner of the intersection of Front and Jackson Streets; thence northerly along said easterly line of Front Street sixty (60) feet to Clark Street; thence at right angles easterly and along the southerly line of Clark Street eighty-five (85) feet to and including the brick wall, and the land on which stands the wall, which now constitutes the rear or easterly wall of the building erected on the premises hereby conveyed; thence at right angles westerly and parallel with Jackson Street eighty-five (85) feet to the easterly line of Front Street and point of commencing; together with all and singular the tenements, hereditaments, and appurtenances thereunto belonging or in anywise appertaining, and the reversion and reversions, remainders and remainders, rents, issues, and profits thereof, and also all the estate, right, title, interest, property, possession, claim, and demand whatsoever, as well in law as in equity, of the said party of the first part, of, in, or to the said premises, and every part and parcel thereof, with the appurtenances. To have and to hold, all and singular, the said premises, together with the appurtenances, unto the said party of the second part, and to his heirs and assigns forever.

In witness whereof, the said party of the first part hath, on the date first above written, caused its corporate name to be hereunto subscribed by its President, and its corporate seal to be hereon affixed by its Secretary, in accordance with a resolution regularly adopted, this — day of September, 1889.

THE REGENTS OF THE UNIVERSITY OF CALIFORNIA.

On motion, the resolution was adopted, and a deed ordered as requested. [September 10, 1889.]

23. RESIGNATIONS.

Regent Phelps presented the resignation of Charles B. Hill as Secretary, Librarian, and Assistant Astronomer of the Lick Observatory, to take effect September 15, 1889. [Accepted, September 10, 1889.]

Resignation of President Davis.

Your committee on matters relating to the Presidency of the University herewith submits the letter of President Davis resigning his office, and in full appreciation of the sentiments expressed in that letter recommends the acceptance of Mr. Davis' resignation, to take effect from the fifteenth of September, 1890:

BERKELEY, April 4, 1890.

To the Board of Regents:

GENTLEMEN: I beg to place in your hands my resignation of the office of President. When I accepted the position I agreed to make my residence in Berkeley. Circumstances beyond my control have made it impossible for me to carry out my promise and I tender my resignation to take effect at as early a day as will be convenient to you.

In all other respects except moving to Berkeley, I believe I have performed the trust you laid upon me, with fidelity. The work has been

congenial to me and I have given it all my time and thought, to the entire exclusion of my private affairs, which have been intrusted to the sole management of other persons. I hope and believe that the University has prospered under my administration, and now, though my official connection with it is dissolved, it will always have my warmest wishes for its continued welfare.

I remain, gentlemen, with great respect, yours very truly,

HORACE DAVIS.

Recommendation of committee concurred in. [May 13, 1890.]

24. RELATING TO LEAVE OF ABSENCE.

President Davis reported that he had given a leave of absence to Professor Hilgard on account of the death of his son. [Approved, November 12, 1889.]

Regent Rodgers presented the following report:

Your special committee, to which was referred the application of Prof. Bernard Moses, dated January 7, 1890, for leave of absence, recommend that under all the circumstances, the application for leave of absence, with pay, for the year beginning September 18, 1890, be granted, with the understanding, however, that the action in this matter shall not hereafter be deemed a precedent. [Approved, March 11, 1890.]

Your committee recommends that Associate Professor C. B. Bradley be granted a leave of absence for one year, without pay, namely, from September 15, 1890, to September 15, 1891. [Report of Committee on Internal Administration; concurred in, April 8, 1890.]

Some of the officers have already finished their work for the year and desire to leave Berkeley at once, some to travel and some to study. Your committee recommends that such as be recommended by the President be allowed to leave without loss of salary. [Report of the Finance Committee; concurred in, June 10, 1890.]

25. APPOINTMENT OF PROFESSORS.

President Davis submitted the following:

Resolved, That Professor Charles M. Gayley be appointed Professor of the English Language and Literature in place of Albert S. Cook, resigned, at a salary of \$3,000 per annum, said appointment to begin September 16, 1889.

On motion, adopted. [July 2, 1889.]

Regent Delmas moved that S. B. Christy, Albin Putzker, and A. W. Jackson be restored to the Professorships held by them when they were made Associate Professors, without change of salary. [Carried, January 18, 1890.]

Resolved, That we respectfully request the Secretary of War to detail First Lieutenant Benjamin H. Randolph, of the Third Artillery, U. S. Army, to succeed Lieutenant Harrison as Professor of Military Science and Tactics in the University of California. [Report of Special Committee on Selection of a Professor of Military Science and Tactics; adopted, May 13, 1890.]

Regent Marye offered the following:

Resolved, That the duties of Professor of Military Science and Tactics in the University have been performed by First Lieutenant George F. E. Harrison, Second Artillery, with great fidelity and efficiency, and in a manner highly satisfactory to the Faculties and the Board of Regents. [Adopted, May 13, 1890.]

Titles of Professors in the Dental Department.

President Davis, to whom was referred the changes in the titles of the Professors of the Dental College, with power to approve, reported that he had approved the said changes, as recommended in the following:

SAN FRANCISCO, January 13, 1890.

To the honorable Board of Regents of the University of California:

GENTLEMEN: I beg respectfully to present the following abstracts from the minutes of the Dental Faculty, viz.:

December 13, 1881.—The amendments to the by-laws, introduced by the Secretary, November 7, 1881, "That the words, 'Dental Art and Mechanism,' of Section 1, be changed to 'Mechanical Dentistry,' was adopted November 21, 1889. Professor Dunbar moved that the title of Professor Goddard's chair be changed to 'Orthodontia and Dental Metallurgy,' and that the subject of 'Mechanical Dentistry' be left with a Lecturer, to be appointed for that purpose. Carried." The same are presented in affirmation of Professor Goddard in his petition of this date.

Very respectfully,

L. L. DUNBAR,
Dean.

February 11, 1890.

26. APPOINTMENT OF ASSOCIATE PROFESSOR.

We recommend that Instructor Thomas R. Bacon be made Assistant Professor of European History, with maximum salary of said position.

The recommendation of the committee was amended to read as follows: "That Thomas R. Bacon be appointed Associate Professor of European History, at a salary of two hundred (\$200) dollars per month, said appointment to date from his resignation of his pastorate of the First Congregational Church of Berkeley, and his acceptance of the position herein offered." [Report of the Finance Committee; adopted, December 10, 1890.]

27. APPOINTMENT OF ASSISTANT PROFESSORS.

Regent Rodgers stated that E. L. Greene had been appointed Assistant Professor of Botany; that said appointment was to continue for a definite period of time; that the said period had not expired when he was made Lecturer on Botany; that such appointment as Lecturer was a reduction in rank, and in violation of a contract of the Board with Mr. Greene. He therefore moved that his appointment as Lecturer be

corrected, and that he be made Assistant Professor of Botany, with his present salary. [Carried, January 18, 1890.]

President Davis submitted the following:

Resolved, That E. L. Greene be appointed Assistant Professor of Botany, at the rate of \$1,500 per annum during his term of service. [Adopted, May 13, 1890.]

Resolved, That Alexander F. Lange be appointed Assistant Professor of the English Language and Literature, for a period beginning September 15, 1890, and ending June 30, 1891, with a salary of — per month, or \$1,800 for the term of appointment. [Report of Committee on Internal Administration; adopted, May 13, 1890.]

28. APPOINTMENT OF DIRECTOR OF PHYSICAL CULTURE.

Resolved, That F. H. Payne, M.D., be appointed Director of Physical Culture, for one year from July 1, 1890, to June 30, 1891, with salary at the rate of \$1,000 per annum. [Report of Committee on Internal Administration; adopted, May 27, 1890.]

29. APPOINTMENT OF LECTURERS.

Resolved, That Adolph P. Miller be and he is hereby appointed Lecturer on Political Economy, for a period beginning September 15, 1890, and ending June 30, 1891, with a salary of — per month, or \$1,800 for the term of appointment. [Report of Committee on Internal Administration; adopted, May 13, 1890.]

Resolved, That E. J. Wickson be appointed Lecturer on Practical Agriculture, for one year from July 1, 1890, to June 30, 1891, with salary at the rate of \$2,400 per annum. [Report of Committee on Internal Administration; adopted, May 27, 1890.]

30. REORGANIZATION OF THE STAFF OF THE DEPARTMENT OF CHEMISTRY.

With reference to the Chemical Department, we think that in view of the removal into the new Chemical Laboratory, the organization of the department ought to be somewhat changed, and we therefore recommend that it be organized as follows:

One Professor at a salary of	\$3,000 a year.
One Assistant Professor at a salary of	1,800 a year.
One Instructor at a salary of	1,000 a year.
One First Assistant at a salary of	720 a year.
One Second Assistant at a salary of	500 a year.

And we recommend that those positions be filled as follows: That Professor Rising be continued Professor as before; that Edmund O'Neill be made Assistant Professor; that J. H. Gray, Jr., be made Instructor; that A. Sommer be made First Assistant, and that V. K. Chestnut be made Second Assistant.

And we recommend that all the foregoing persons be required to give their whole time to the service of the University, and if Mr. Sommer is unable to comply with this requirement and is therefore unwilling to accept the position of First Assistant, we suggest that the salary of that position be fixed at \$600 per annum, instead of \$720 as recommended

above. [Report of Committee on Internal Administration; concurred in, June 24, 1890.]

31. APPOINTMENT OF INSTRUCTORS.

President Davis nominated George M. Richardson as Instructor in Latin, to act from September 19, 1889, to July 1, 1890.

On motion, adopted. [July 2, 1889.]

President Davis submitted the following resolution:

Resolved, That Dr. G. M. Richardson's term of employment as Instructor in Latin include the period from September twelfth to September nineteenth, inclusive, and that he be paid therefor. [Adopted, November 12, 1890.]

Regent Marye moved that W. W. Deamer be elected Instructor in Latin.

Regent Rodgers moved that G. M. Richardson be elected Instructor in Latin.

On roll call, Mr. Richardson was declared elected. [May 27, 1890.]

Resolved, That Dr. Frank G. Hubbard be appointed an additional Instructor in English for one year, from September 15, 1889, to September 14, 1890, at a salary of \$1,500 per annum. [Report of special committee to consider the necessity of providing further instruction in English and the Modern Languages; adopted, September 10, 1889.]

President Davis submitted the following:

Resolved, That during the illness of Professor Bunnell, President Davis be authorized to employ Prof. R. F. Pennell, at a salary of one hundred and fifty (\$150) dollars per month to take charge of the Greek Department, said appointment to begin October 7, 1889. [Adopted, November 12, 1889.]

President Davis submitted the following:

Resolved, That during the illness of Associate Professor Clarke, President Davis be authorized to employ Dr. Carlo Veneziani as Instructor in the Mathematical Department, at a salary of one hundred and twenty-five (\$125) dollars per month, from Tuesday, October 1, 1889. [Adopted, November 12, 1889.]

President Davis submitted the following:

Resolved, That the following appointments be made on the teaching staff at Berkeley:

The following Instructors for one year, from July 1, 1890 to June 30, 1891: Hermann Kower, in Instrumental Drawing, at the rate of \$1,700 per annum; Edmund O'Neill, in Chemistry, at the rate of \$1,700 per annum; W. D. Armes, in English, at the rate of \$1,500 per annum; J. H. Senger, in German and Greek, at the rate of \$ — per annum; Franklin Booth, in Mining and Metallurgy, at the rate of \$1,200 per annum; also, Frank G. Hubbard, in English, from September 14, 1890, to June 30, 1891, for the sum of \$1,500. [Appointments made, May 13, 1890.]

Department of Mathematics.

When Professor Clarke was made Assistant Professor in 1885, there were two hundred and fifty students in the College. The Register just issued shows four hundred and one. Thus, the number of students has increased 80 per cent without any corresponding increase in the teaching

force in mathematics. The time has now come when such an increase is necessary, and it can be accomplished without material increase of expense, or weakening of the efficiency of the instruction, by abolishing the vacant Associate Professorship and substituting for it two Instructorships. The salary of the Associate Professor has been \$2,400; the compensation of two Instructors, at \$1,500 each, will be \$3,000; an annual increase of \$600. This change is recommended by President Davis and Professor Stringham, and we hand in with this report a detailed statement by Professor Stringham, of the work of the department for the past ten years, and of the proposed work for the coming year, showing the number of courses of study, the hours required for each, and the number of students engaged in each. It will be seen from this statement that sixty hours of class-room work is required in the Mathematical Department in the coming year, which will require four teachers.

We therefore recommend the following resolution: "That the Second Associate Professorship of Mathematics be hereby abolished, and two Instructorships be established in its place, each at a salary of \$1,500 per annum." [Report of Committee on Internal Administration; report and resolution adopted, May 27, 1890.]

President Davis submitted the following:

Resolved, That instead of two Instructors in Mathematics at \$1,500 per annum each, the Board will allow the \$3,000 devoted to their salaries to be divided into two unequal parts, if, in the opinion of the President and Professor Stringham, such course should be for the benefit of the University. [Adopted, June 10, 1890.]

That Mellen W. Haskell be appointed Assistant Professor of Mathematics at a salary of \$1,800 a year, for the term of one year, commencing July 1, 1890, with the understanding that if his services are satisfactory, he will be reemployed for another year at the same salary. [Report of Committee on Internal Administration; concurred in, June 24, 1890.]

That Armin O. Leuschner be appointed Instructor in Mathematics at a salary of \$1,200 a year, for the term of one year, commencing July 1, 1890. [Report of Committee on Internal Administration; concurred in, June 24, 1890.]

32. RECORDER'S OFFICE.

Finlay Cook to be Recorder, appointment to date from July 1, 1889, and to continue until July 1, 1890. [Report of special committee to fill vacancies; concurred in, July 2, 1889.]

James Sutton to be Recorder's Clerk, to date from July 1, 1889, to July 1, 1890. [Report of special committee to fill vacancies; concurred in, July 2, 1889.]

Resolved, That Finlay Cook be appointed Recorder, from July 1, 1890, to June 30, 1891, at a salary of \$900 for the year.

Resolved, That James Sutton be appointed Recorder's Clerk, from July 1, 1890, to June 30, 1891, at a salary of \$600 for the year. [Report of Committee on Internal Administration; resolutions adopted, June 24, 1890.]

33. ASSISTANTS.

John H. Gray, Jr., to be Department Assistant in Chemistry, vice Ritter, resigned, to date from September 19, 1889, to July 1, 1890. [Report of special committee; concurred in, July 2, 1890.]

Victor K. Chestnut and Samuel S. Peck, to be Student Assistants in the Chemical Laboratory, to date from September 19, 1889, and to continue until July 1, 1890. [Report of special committee; concurred in, July 2, 1889.]

Meyer E. Jaffa, to be Assistant in Agricultural Laboratory, instead of First Assistant in Viticultural Laboratory. [Report of special committee; concurred in, July 2, 1889.]

That Franklin Booth be appointed Department Assistant in Mining and Metallurgy, to date from July 1, 1889, to July 1, 1890.

On motion, the recommendation was amended so as to read: "That Franklin Booth be appointed Instructor in Mining and Metallurgy, to date from July 1, 1889, to July 1, 1890;" and then the recommendation, as amended, was concurred in. [Report of special committee, July 2, 1889.]

President Davis recommended that John C. Merriam be appointed Student Assistant in the Department of Mineralogy, to date from September 19, 1889, and to continue until July 1, 1890. [Concurred in, July 2, 1889.]

That A. F. Mack be appointed Department Assistant in the College of Mechanics, to date from September 19, 1889, and to continue until July 1, 1890. [Concurred in, July 2, 1889.]

In the matter of the petition of W. J. Raymond and E. R. Drew, for a change in date of their appointment, namely, from September 19, 1889, to July 1, 1889, referred to this committee at the meeting of the Board held September 10, 1889, we recommend that the appointment of said petitioners be made, to date from July 1, 1889, and to continue until July 1, 1890, and that each be paid \$75 per month for the period of the appointment. [Report of the Finance Committee; concurred in, November 12, 1889.]

Report of Committee on Internal Administration.

Resolved, That the following appointments be made:

E. R. Drew, Assistant in Physics, for one year, from July 1, 1890, to June 30, 1891, at the rate of \$1,200 per annum.

W. J. Raymond, Assistant in Physics, for one year, from July 1, 1890, to June 30, 1891, at the rate of \$1,200 per annum.

E. Rixford, Assistant in Mechanics, from September 18, 1890, to June 30, 1891, at the rate of \$50 per month.

J. D. Layman, Assistant Librarian, for one year, from July 1, 1890, to June 30, 1891, at the rate of \$1,200 per annum.

Walter Magee, Assistant in Physical Culture, for one year, from July 1, 1890, to June 30, 1891, at the rate of \$1,500 per annum.

M. E. Jaffa, Assistant in Agricultural Laboratory, for one year, from July 1, 1890, to June 30, 1891, at the rate of \$1,500 per annum.

Louis Paparelli, First Assistant in Viticultural Laboratory, for one year, from July 1, 1890, to June 30, 1891, at the rate of \$1,500 per annum.

George E. Colby, Second Assistant in Viticultural Laboratory, for one year, from July 1, 1890, to June 30, 1891, at the rate of \$1,200 per annum.

K. McLennan, Gardener to the College of Agriculture, for one year, from July 1, 1890, to June 30, 1891, at the rate of \$840 per annum.

W. G. Klee, Inspector of Stations, for one year, from July 1, 1890, to June 30, 1891, at the rate of \$1,500 per annum.

Joseph W. Flynn, Printer, for one year, from July 1, 1890, to June 30, 1891, at the rate of \$720 per annum.

[Adopted, May 27, 1890.]

Resolved, That John C. Merriam be appointed Student Assistant in Minerology, from September 15, 1890, to June 30, 1891, at a salary of \$20 per month. [Report of the Committee on Internal Administration; adopted, June 24, 1890.]

President Davis submitted the following:

Resolved, That J. A. Sladky be appointed Superintendent of Machine Shops, from July 1, 1890, to June 30, 1891, with salary at the rate of \$1,800 per annum. [Adopted, May 13, 1890.]

Inspector.

That W. G. Klee be appointed Inspector of Stations, from July 1, 1889, to July 1, 1890. [Report of special committee appointed to fill vacancies; concurred in, July 2, 1889.]

Assistant in Department of Civil Engineering.

We recommend that the petition of Professor Soulé be granted, and that the Department of Civil Engineering be accordingly allowed a student assistant for eight months of the academic year, with pay of \$20 per month when employed. [Report of Committee on Internal Administration; concurred in, May 27, 1890.]

34. UNIVERSITY PUBLICATIONS.

We recommend that one thousand five hundred copies of Professor Gayley's Bibliography on *Æsthetics* be printed by the State Printer. [Report of Committee on Library and Museum; concurred in, November 12, 1889.]

35. ENTRANCE EXAMINATIONS.

President Davis offered the following:

Resolved, That the Academic Council be authorized to hold entrance examinations at Visalia regularly each year hereafter. [Adopted, January 18, 1890.]

36. RESIDENCE AT BERKELEY.

With reference to the residence at Berkeley of the President, and of persons giving instruction in the University, your committee is of the opinion that the President and all Professors, Associate Professors, and Assistant Professors should reside at the seat of the University at Berkeley, and your committee would recommend the adoption by the Board of the following regulation, to apply to all persons hereafter appointed to any of those offices, namely:

The following officers shall reside at the seat of the University at Berkeley: The President, Professors, Associate Professors, Assistant Professors giving instruction exclusively at Berkeley, and the Secretary of the Board of Regents.

The restrictions upon the residence of the officers above mentioned may be removed by the Board of Regents in individual cases for cause. Your committee is of the opinion that this regulation should apply to the present incumbent of the office of President, because he was appointed with the distinct understanding that he was to reside at Berkeley; but he has adduced reasons which to your committee seem sufficient, why he has not and does not now reside at Berkeley. [Report of Committee on Internal Administration; adopted, April 8, 1890.]

37. DEGREES CONFERRED.

College of Pharmacy.

President Davis submitted the following report from the Dean of the College of Pharmacy:

President HORACE DAVIS:

DEAR SIR: In accordance with a vote of the Board of Trustees of the California College of Pharmacy, passed October 4, 1889, the following named students, who have satisfactorily completed the required course of study, and passed the necessary examinations, are hereby recommended to the honorable Board of Regents for the degree of "Graduate in Pharmacy."

Henry M. Beck	Ninth and Mission Streets, San Francisco.
Frank W. Bilger	951 Broadway, Oakland.
Charles P. Bowen	124 Ellis Street, San Francisco.
Levitt H. Cox	735 Turk Street, San Francisco.
Lincoln Fitzell	Eureka, California.
Allie S. Fox	261 Twelfth Street, Oakland.
Henry G. Gerdes	500 Guerrero Street, San Francisco.
Benj. F. Hall	401 Sixth Street, San Francisco.
Frank B. Herder	Twelfth and Broadway, Oakland.
Geo. J. Harvey	34 First Street, San Francisco.
Henry F. Morgan	124 Ellis Street, San Francisco.
Ambrose E. O'Neill	610 Seventh Street, San Francisco.
Joseph Van Worthen	603 Montgomery Street, San Francisco.
Otto A. Weihe	119 Morris Avenue, San Francisco.
Allen C. Wagener	San José, California.
Lawrence E. Williams	1101 Broadway, Oakland.
Julien E. Waller	1406 Van Ness Avenue, San Francisco.
Adolph W. Borchers	Sixth and Harrison Streets, San Francisco.

The degree of Graduate in Pharmacy was conferred upon the foregoing candidates in accordance with the recommendations of the Faculty of the College of Pharmacy. [November 12, 1889.]

College of Dentistry.

President HORACE DAVIS:

DEAR SIR: In accordance with a vote of the Faculty of the College of Dentistry, passed November 6, 1889, the following named students, who have satisfactorily completed the required course of study, and passed the necessary examinations, are hereby recommended to the honorable Board of Regents for the degree of Doctor of Dental Surgery:

Milton Ross Gambitz	San Francisco, Cal.
Benjamin Mitchell Gunzburger	San Francisco, Cal.
William Alexander Meyer	San Francisco, Cal.
Warren Guice Mobley	North Bloomfield, Cal.
Dorr Nash	Nicolaus, Cal.

Joseph Pfister	Pinole, Cal.
Andrew John Powell	Haywards, Cal.
Edward William Pratt	San Francisco, Cal.
Frederick Courtland Sutliff	Sacramento, Cal.
Arthur Henry Wallace	Stockton, Cal.

L. L. DUNBAR,
Dean.

Degrees conferred as recommended. [November 12, 1889.]

College of Medicine.

President HORACE DAVIS:

DEAR SIR: In accordance with a vote of the Faculty of the Medical Department, passed November 7, 1889, the following named students, who have satisfactorily completed the required course of study, and passed the necessary examinations, are hereby recommended to the honorable Board of Regents for the degree of Doctor of Medicine:

Robert E. Bunker	San Francisco.
Francesca I. Foreman	San Francisco.
Christopher C. Gleaves	San Francisco.
William H. Haskin	San Francisco.
Edward R. Holmes	San Francisco.
Ottiwil W. Jones	San Francisco.
Masayasu Kawakami	San Francisco.
Frances R. Marx	San Francisco.
Squier R. Mather	San Francisco.
Oscar J. Mayer	San Francisco.
Aloysius P. O'Brien	San Francisco.
Joseph A. Oliver	San Francisco.
Samuel P. Tuggle	San Francisco.
Mark S. Wade	San Francisco.
Gustave C. Zeyn	San Francisco.

R. A. McLEAN,
Dean.

Degrees conferred as recommended. [November 12, 1889.]

The Hastings College of the Law.

President Davis submitted the following:

UNIVERSITY OF CALIFORNIA, }
HASTINGS COLLEGE OF THE LAW. }

President DAVIS:

DEAR SIR: In accordance with a vote of the Board of Directors of the Hastings College of the Law, passed June 6, 1890, the following named students, who have satisfactorily completed the required course of study, and passed the necessary examinations, are hereby recommended to the honorable Board of Regents for the degree of Bachelor of Laws:

1. Walter John Bartnett, A.B.	San Francisco.
2. William Henry Carlin	Wheatland.
3. Joseph Louis Dumontier, A.B.	San Francisco.
4. Warren Cranston Gregory, A.B.	Pacheco.
5. Samuel Haskins, A.M.	San Francisco.
6. Thomas Eastman Haven, A.B.	San Francisco.
7. Arthur Inkersley, A.B.	San Francisco.
8. James Clarence McKinstry, A.B.	San Francisco.
9. Jacob Samuels, A.B.	San Francisco.
10. William Wilson Sanderson, Ph.B.	San Francisco.

11. Arthur Kenningford Sheats	San Francisco.
12. Harry Heinzelman Timken	San Diego.
13. Sidney McMechen Van Wyck, Jr.	San Francisco.

[Attest:]

EDWARD J. RYAN,
Registrar.

On motion, the degree of Bachelor of Laws was conferred on each of the candidates named in the foregoing list. [June 10, 1890.]

Colleges at Berkeley.

Regent Bartlett, on behalf of the special committee to which was referred the following applications for degrees, reported in favor of granting the degrees, as recommended by the Faculties at Berkeley:

College of Letters—Degree of Ph.B.

George Russell Lukens	Oakland, Cal.
-----------------------------	---------------

College of Mining—Degree of B.S.

John Cushing Dornin	Fulton, Cal.
---------------------------	--------------

[Conferred, January 18, 1890.]

President Davis presented a recommendation of the Faculty, as follows:

President HORACE DAVIS:

DEAR SIR: In accordance with a vote of the Faculty of the College of Chemistry, passed February 19, 1890, the following student, who has satisfactorily completed the required course of study, and passed the necessary examinations, is hereby recommended to the honorable Board of Regents for the degree of Bachelor of Science:

Frederick William Abourn Wright	Berkeley.
---------------------------------------	-----------

IRVING STRINGHAM,
Dean.

On motion, the degree of Bachelor of Science was conferred as recommended. [March 11, 1890.]

President Davis submitted the reports of the several Faculties recommending that degrees be conferred on the following graduates of the University at Berkeley, as follows:

1. By the Faculty of the College of Letters, recommending that the degree of Bachelor of Arts be conferred upon the following candidates:

Richard Frank Dean	San Francisco.
Andrew Mitchell Henderson	Sacramento.
Ruth Wales Hobson	Berkeley.
Mollie Morton	Sacramento.
John Dunning Rideout	San Francisco.
Edward Heald Stearns	Oakland.
Arthur Irwin Street	Berkeley.

On motion, the degree of Bachelor of Arts was conferred as recommended.

2. By the Faculty of the College of Letters, recommending that the degree of Bachelor of Letters be conferred upon the following candidates:

William Henry Davis	Marysville
Fanny Matilda Henderson	Oakland
Leslie Randall Hewitt	Los Angeles
Edward Coke Hill	Seattle, Washington
Fred. William McNear	Oakland
Ruth Merrill	Sacramento
William Sidney Smith	Stockton

On motion, the degree of Bachelor of Letters was conferred as recommended.

3. By the Faculty of the College of Letters, recommending that the degree of Bachelor of Philosophy be conferred upon the following candidates:

Henry French Bailey	Santa Cruz
James Hickcox Carey	San Francisco
Josephine Estelle Chapman	Alameda
Rose Mary Dobbins	Berkeley
Ernest Norton Henderson	Sutter Creek
Norman Russell Lang	Oakland
Lewis McKisick	San Francisco
Orrin Kip McMurray	Lorin
Anna McNeill	San Francisco
Ada Hope Ramsdell	Alameda
Frank Elmer Rich	San José
William Lafayette Rodgers	Watsonville
Leon Samuels	San Francisco
Guy Heancastle Stokes	Berkeley
Donzel Stoney	San Francisco
Chas. Edward Townsend	Oakland
Frederick Leslie Wharff	San Francisco
Harry Lord Wilson	San Francisco

On motion, the degree of Bachelor of Philosophy was conferred as recommended.

4. By the Faculty of the College of Mechanics, recommending that the degree of Bachelor of Science be conferred on the following candidates:

David Clarence Demarest	Angels Camp
Hugh Howell	Oakland
Cornelius B. Lakenan	Grass Valley
Arthur Fisher Mack	Westminster

On motion, the degree of Bachelor of Science was conferred as recommended.

5. By the Faculty of the College of Civil Engineering, recommending that the degree of Bachelor of Science be conferred upon the following candidates:

Daniel Sawyer Halladay	Santa Ana
Arthur Incell	San Francisco
Jabez Arthur Jenkins	Grass Valley
Henry Gridley Parker	Santa Ana
Archie Burton Pierce	San Francisco

On motion, the degree of Bachelor of Science was conferred as recommended.

6. By the Faculty of the College of Chemistry, recommending that the degree of Bachelor of Science be conferred on the following candidates:

Samuel Stodole Peck	San Francisco
Wallace Irving Terry	Sacramento
Victor King Chestnut	Oakland

On motion, the degree of Bachelor of Science was conferred as recommended.

7. By the Faculty of the College of Agriculture, recommending that the degree of Bachelor of Science be conferred on the following candidate:

Hubert Paul Dyer	Oakland
------------------------	---------

On motion, the degree of Bachelor of Science was conferred as recommended. [June 24, 1890.]

38. UNIVERSITY MEDAL.

President Davis submitted the recommendation of the Academic Council, that the University Medal for 1890 be awarded to Orrin Kip McMurray.

On motion, concurred in. [June 24, 1890.]

39. DUPLICATE DIPLOMA.

Mr. Kelsey's diploma was destroyed by fire, as stated in the following sworn statement, and the Board of Trustees request the Board of Regents to issue a duplicate diploma.

E. W. RUNYON,
Secretary Board of Trustees.

To the honorable Board of Regents of the University of California:

This is to certify that on the fourth day of July, 1889, in the City of Ellensburg, County of Kittitas, Territory of Washington, the diploma granted to Harry D. Kelsey, in 1888, by your honorable body, was destroyed by fire on the aforesaid date, in the general conflagration of the aforesaid city.

HARRY D. KELSEY.

Subscribed and sworn to before me, a Notary Public in and for the County of San Mateo, State of California, the fourteenth day of September, 1889.

GEO. C. ROSS,
Notary Public.

Correct:

E. W. RUNYON,
Dean Department of Pharmacy, University of California.

Thereupon, the Board ordered a duplicate diploma to be issued to said Harry D. Kelsey. [November 12, 1889.]

40. AGRICULTURAL EXPERIMENT STATIONS.

Clerk to the Director.

That the Committee on Experiment Stations be authorized to make the appointment to the position of Clerk to the Director of Agricultural Experiment Stations; said appointment to continue until the next meeting of the Board. [Report of special committee to fill vacancies; concurred in, July 2, 1889.]

L. W. Maslin was appointed, and resigned January 1, 1890.

Regent Martin presented the following communication from Director Hilgard:

BERKELEY, December 18, 1889.

Hon. J. WEST MARTIN, Chairman Committee on Experiment Stations:

DEAR SIR: Mr. L. W. Maslin, the present incumbent of the clerkship in this department, having tendered his resignation in consequence of his appointment to the superintendency of the vineyard at the State Home for the Feeble-Minded, I respectfully nominate as his successor Mr. E. F. Goodyear (a student of the University, now on leave of absence on account of financial disability, but having a first rate class record for three terms), and request your approval of his appointment, to take effect January 1, 1890.

It should be understood, and I have so informed Mr. Goodyear in advance, that the clerk cannot claim the regular privileges of vacation. His absence necessarily throws all his duties on the Director, and in the temporary absence of the latter it is necessary that the regular business correspondence, account keeping, etc., should be attended to as closely as ever. I suggest that it would be well to put this regulation in official form in making the new appointment.

Respectfully,

E. W. HILGARD,
Director.

The appointment of E. F. Goodyear as Clerk to the Director, at a salary already ordered by the Board, namely, \$50 per month, was then made with the conditions stated in Director Hilgard's letter. [January 18, 1890.]

Budget of Agricultural Experiment Station.

Regent Martin, from the special committee on Agricultural Experiment Stations, submitted the following:

BERKELEY, February 10, 1890.

Hon. J. WEST MARTIN, Chairman Committee on Experiment Stations:

DEAR SIR: You are aware that the budget for the current fiscal year reserved the sum of \$1,980 towards the equipment of an Experiment Station, to be established in Southern California, of which there seemed to be a definite prospect under offers made by the Pomona Land and Water Company, in conjunction with Mr. Richard Gird. The consummation, as I understand, still depends simply upon the realization by the latter of certain business enterprises, which has been delayed by the depression of values in that section. According to my latest information, it is probable that this will occur within this month. But the season is advancing very fast, and it is certain that not much could, in any case, be done toward any actual work before next autumn. It therefore appears to me that in order to avoid the necessity of precipitate expenditure of the reserved sum—already reduced to \$1,542 14 by allowance made for expense of water supply for the Amador Station—at the end of the fiscal year, I propose to begin to use it at once for the making of such needed improvements at the stations already in active progress as might otherwise have been made more gradually, but would

in any case have had to be made within the next two years. Then, should the matter of the Southern Station come to a point, we can begin improvements there after June thirtieth of the present year, in time to be ready for active operations next season.

If this disposition of the matter meets the approval of yourself and the Finance Committee, I propose to make at once a number of requisitions looking to the proper expenditures of the above sum, and chargeable to that particular item of the budget.

Very respectfully,

E. W. HILGARD,
Director of Experiment Stations.

Regent Houghton moved that the Professor be allowed to use the unexpended balance of \$1,542 14 on the Experiment Stations now equipped. [Carried, February 11, 1890.]

Insurance.

We report that a policy covering the value of \$1,800 on the Experiment Station building, at Paso Robles, has expired, and request instructions as to renewal. [Report of the Finance Committee; renewal ordered, November 12, 1889.]

We recommend that the buildings of the Agricultural Experiment Stations be insured, the premiums to be paid from the United States Experiment Station Fund of \$15,000. [Report of the Finance Committee; concurred in, March 11, 1890.]

Certificate of Deposit of Committee of Tulare Grange.

The committee of Tulare Grange, appointed to collect money and put up buildings for above station, deposited by mistake \$40 in Tulare Bank to the credit of the Regents.

We recommend the adoption of the following:

Resolved, That the Secretary is instructed to indorse said certificate of deposit, payable to B. F. Moore, W. F. Stuart, E. S. Pinney, and J. H. Bolche, committee of Tulare Grange, with the understanding that said amount is to be expended only on buildings belonging to the San Joaquin Valley U. S. Experiment Station at Tulare. [Report of the Finance Committee; adopted, March 11, 1890.]

Morrill Senate Bill No. 3,256 Indorsed by the Regents.

Regent Martin presented the following:

WHEREAS, The Regents of the University of California having under consideration the Morrill Senate Bill No. 3,256, introduced in the Senate of the United States March 25, 1890, entitled "A bill to establish an educational fund, and apply the proceeds of the public lands, and a portion of the receipts of certain land grant railroad companies, to public education and the more complete endowment and support of colleges for the advancement of scientific and industrial education."

Resolved, That the Board of Regents does hereby approve the provisions and indorse the purposes of the said bill, and recommends its passage. And the President of the University is hereby authorized to transmit a copy of the above preamble and the resolution to the Senate

Committee on Education and Labor having the bill in charge, under his official indorsement.

[Adopted, May 13, 1890.]

41. RELATING TO THE LICK ASTRONOMICAL DEPARTMENT.

Lease to R. F. Morrow.

Regent Phelps reported that the lease to Robert F. Morrow, covering certain lands on Mount Hamilton, would expire March 1, 1890, and recommended that a new lease be executed to R. F. Morrow for a term of three years.

On motion, the Committee on Lick Observatory was authorized to execute a lease for three years to R. F. Morrow. [February 11, 1890.] The lease was executed.

Planting Trees on Mount Hamilton.

We recommend that \$100 be appropriated for planting trees, and trees only, at Mount Hamilton by the Agricultural Department of the University, under the direction of the Committee on Lick Observatory. [Report of Committee on Lick Observatory; adopted, December 10, 1889.]

Repairs to Retaining Walls.

It is necessary that the retaining wall protecting the upper side of the roads on Mount Hamilton be rebuilt. The material used is a friable sandstone, which is rapidly going to pieces. We have instructed the Director to rebuild with brick and cement, and to use the men on the grounds for that purpose. There is some cement at the Observatory, but more will be needed. The cost of the new retaining wall should be charged against the balance of \$3,626 21 in the hands of the Lick Trust. [Report of Committee on Lick Observatory; approved, June 24, 1890.]

Brick Buildings on Mount Hamilton to be Oiled.

Your committee is of the opinion that the exterior of the brick buildings on Mount Hamilton should be oiled with crude petroleum. The cost will be less, and the work will be more serviceable than any other material.

We submit the proposition with the recommendation that the committee be authorized to carry out this plan at the least possible cost. The cost can be charged to the budget apportionment of the Lick Observatory. [Report of the Committee on Lick Observatory; concurred in, June 24, 1890.]

Improvement of Floor around Lick Mausoleum.

Regent Phelps presented a letter from the Secretary of the Lick Trustees in relation to the improvement of the floor around the Lick Mausoleum, and moved that said improvement be made.

As an amendment, Regent Hager moved that the Lick Trustees, with the consent and approval of the Committee on Lick Observatory, be authorized to complete the improvements to the Lick Mausoleum. Cost

to be paid out of the balance of the Lick Fund now in the hands of the Trustees. [Adopted as amended, July 23, 1889.]

The plans for the foregoing improvements have been revised, and the work will be delayed.

Insurance of Frame Buildings on Mount Hamilton.

Regent Hallidie reported that insurance, amounting to \$4,300, upon certain frame buildings on Mount Hamilton, belonging to the Lick Astronomical Department, had expired. A motion to renew policies covering \$4,300 on said buildings, was adopted. [June 10, 1890.]

Insurance of Large Dome.

Regent Phelps moved that, as the dome at the south end of the Lick Observatory was built of stone and iron, and was fireproof, that the insurance on the same be not renewed. [Adopted, July 23, 1890.]

Regent Hager offered the following:

Resolved, That the professors and astronomers at the Lick Observatory be authorized to take books, etc., from the library at Berkeley, on the same terms allowed the professors at Berkeley. [Adopted, September 10, 1889.]

Report of the Committee on Library and Museum.

Binding of Books, etc., for the Lick Observatory Library.

The reports of the Director of the Lick Observatory and the Librarian of the University, show that there are a number of books and pamphlets at the Lick Observatory Library requiring binding—making seven hundred and twenty-nine volumes, at an estimated cost of about \$420.

Ordered that the books be bound, and that \$420 be appropriated for that purpose from the General Fund. [September 10, 1889.]

Purchase and Subscription of "Himmel und Erde."

For purchase and subscription of "Himmel und Erde," monthly (Berlin), from October, 1889, to October, 1890. Cost, \$5. [Concurred in, November 12, 1889.]

Purchase of Argelander's Atlas.

We recommend the purchase of Argelander's Atlas for the Lick Observatory. Cost not to exceed \$45. [Adopted, December 10, 1889.]

Periodicals.

Regent Hager recommended that the following periodicals be subscribed for for the use of the Lick Astronomical Department:

Journal of Mathematics, Vols. 106 and 107	\$7 00
Astronomische Nachrichten, Vols. 125 and 126	8 00
Bulletin Astronomique, 1890	4 75
Observatory, 1890	3 50
Nature, 1890	6 00
Astronomical Journal, 1890	5 50
Annals of Mathematics, 1890	2 00
Sidereal Messenger, 1890	3 00
Total	\$39 75

[Ordered, March 11, 1890.]

Periodicals; Standing order for.

Regent Stebbins, on behalf of the Committee on Library and Museum recommended that a standing order be adopted for regular annual subscription to the following periodicals for the use of the Lick Observatory:

Nature (American edition)	\$6 00
Astronomische Nachrichten (per 2 vols.)	8 00
The Observatory	3 50
Crelle's Journal of Mathematics	7 00
Astronomical Journal	5 50
Sidereal Messenger (new price)	3 00
Bulletin Astronomique	4 75
Annals of Mathematics	2 00
Himmel und Erde	5 00

\$44 75

[Concurred in, April 8, 1890.]

**Books to be Purchased.*

Regent Stebbins, on behalf of the Committee on Library and Museum, submitted a requisition of Director E. S. Holden, requesting that the following books be purchased for the use of the Lick Astronomical Department, payable out of the budget for the next year, recommending that purchase be ordered:

General index to Vols. 1-15 of "Sirius"—3 m.	\$0 90
Sammlung von Formeln der Mathematik (Dr. W. Laska); 1st Lieferung, \$1 90, 2d Lieferung, 6.50 m., 3d Lieferung, (i) 5 m.	5 50
J. Bertrand: Calcul des Probabil; tés 1 Vol. 8 ^{mo} 1889—12 fcs.	3 12
General index to Vols. 1-10, American Journal Mathematics, 1 Vol., 4 ^{to}	1 00
F. Tisserand: Traité de Mécanique Céleste; Vols. 1-2	13 00
V. Koukoly: Praktische Anleitung zur Himmels Photographie, 1 Vol.	2 00
Pendelbury's Lenses and System of Lenses (6 m.), 1 Vol.	1 80
Zoellner: Grundzüge einer allgem. Photometrie des Himmels—about 7 marks.	2 10
General Analytical Index to Encyclopædia Britannica	6 00

Not to exceed \$36 00

Concurred in, and purchase ordered. [June 10, 1890.]

Appointment of a Secretary of the Lick Observatory.

In the matter of the appointment of a Secretary of the Lick Observatory, vice Mr. Hill, resigned, referred to this committee by the Board, September 10, 1889, we recommend that Augustus J. Burnham be temporarily appointed Secretary, with a salary of \$50 per month, to date from October 1, 1889.

On motion, the report was amended so as to read "from September 15, 1889." (Report of Committee on Lick Observatory.)

Recommendation concurred in as amended. [November 12, 1889.]

Appointment of a Laborer at the Lick Observatory.

Resolved, That Hugh Kennedy be employed at the Lick Observatory as a laborer, at a salary of sixty (\$60) dollars per month. [Report of Committee on Lick Observatory; adopted, July 23, 1890.]

Post Office on Mount Hamilton.

It is the opinion of this committee that a Government Post Office is needed at Mount Hamilton, and we therefore recommend the adoption of the following resolution:

Resolved, That the California delegation in Congress be requested to use their influence to procure the establishment of a postal route between San José and Mount Hamilton, in the County of Santa Clara, and a Post Office at the Lick Observatory, with Mr. S. W. Burnham as Postmaster. [Report of Committee on Lick Observatory; adopted, November 12, 1889.]

In December, 1889, a Post Office was established at Mount Hamilton, and S. W. Burnham was appointed Postmaster.

Purchase of Mules.

Resolved, That the Committee on Lick Observatory be authorized to purchase, at a cost not to exceed \$300, a span of mules, to be used for all work at the Observatory, and to sell the team now on hand. [Report of the Committee on the Lick Observatory; adopted, July 23, 1889.]

Claim of Mount Hamilton Stage Company.

We present herewith the claim of the Mount Hamilton Stage Company for \$400, for carrying mail, expressage, and freight between Mount Hamilton and San José, without recommendation. [Report of the Finance Committee; ordered paid, January 18, 1890.]

Donation of \$200 to Purchase a Spectroscope.

Regent Phelps, Chairman of the Committee on the Lick Observatory, read the following letter from Director E. S. Holden:

MOUNT HAMILTON, February 6, 1890:

Hon. T. G. PHELPS, Chairman Lick Observatory Committee (through Secretary of the University of California):

DEAR SIR: The American Association for the Advancement of Science has a fund whose interest is spent in grants in aid of science. I applied for \$300 of this fund for a small spectroscope, to use with the 36-inch equatorial, and gave reasons for wanting it, which were sufficient to the Trustees of the fund. They agreed that it was needed. Objection was made to granting the \$300 to the Lick Observatory, because "California was a rich State," and "because Professor Holden could easily raise the money by writing a couple of letters," etc., etc. Professor Pickering, Director of Harvard College Observatory, stood our friend, and finally got the Trustees to promise to give us \$200, if we would raise \$100. The money is to buy a spectroscope to remain permanently at the Lick Observatory.

Accordingly, I beg to submit herewith a requisition for \$100, part payment for this instrument.

I am, dear sir, very respectfully yours,

E. S. HOLDEN.

Regent Phelps recommended that \$100 be appropriated for the purchase of a spectroscope, as requested. [Concurred in, February 11, 1890.]

Hotel on Mount Hamilton.

Regent Hager, from the Committee on the Lick Observatory, presented the following:

Resolved, In the opinion of this Board it is necessary for the uses and purposes of the Lick Observatory, that there should be erected on the grounds of the Observatory, buildings sufficient to afford to officers, employés, students, and visitors, necessary accommodations, board, lodging, etc., and in order to carry out such purpose the Committee on the Lick Observatory is authorized to negotiate and to report any proposed agreement for the consideration and action of this Board. [Adopted, January 18, 1890.]

The following is the agreement entered into:

This agreement made by and between the Regents of the University of California, parties of the first part, a corporation, and Alexis B. Chapin, party of the second part, witnesseth: That whereas, the parties of the first part possess, under and by virtue of an Act of Congress entitled "An Act granting a site for an Observatory to the Trustees of the Lick Observatory of the Astronomical Department of the University of California," approved June 7, 1876, all that piece, parcel, or tract of land hereinafter particularly described; and whereas, in the opinion of the Board of Regents, it is necessary for the uses, purposes, and proper administration of said Lick Observatory that there should be erected on said tract of land buildings to afford suitable accommodation, board, lodging, etc., for the employés of said Observatory and such persons as may visit the same; and whereas, the said party of the second part has proposed in writing to erect, finish, maintain, and conduct such buildings upon said particularly described tract of land.

Now, in consideration of the premises, said party of the first part hereby grants, for the term of ten years from the date hereof, the privilege and license to said party of the second part to construct such buildings for the purpose aforesaid, on the tract of land situated in Santa Clara County, State of California, described as follows, to wit:

Description

Among other covenants, it is expressly agreed by said parties:

First—That upon and contemporaneous with the execution hereof, said party of the second part shall and will execute and deliver a good and sufficient bond to said party of the first part in the sum of \$5,000, with two sureties, to be approved by said first party, to the effect that said second party will immediately proceed to erect on said premises said buildings, and complete the same on or before the day of —, 1890, together with the necessary stables, barns, outhouses and fences, and also a reservoir or reservoirs for water, convenient and sufficient for said purposes.

That the main building shall contain not less than thirty rooms, and other buildings and improvements shall be erected according to the plans and specifications to be furnished by said second party, and approved by said first party. Said buildings may, upon like approval, be enlarged, from time to time, as may be required.

Second—Said party of the second part agrees and promises to manage and conduct said premises in an orderly and respectable manner, and to exclude therefrom all disorderly persons; and, further, not to sell, or permit to be sold on said premises, malt or spirituous liquors of any kind, except it be wine to visitors, and then only in bottles in quantities of not less than one pint or quart.

Third—This license and agreement is personal to said second party, and is not assignable without the consent of the party of the first part, given in writing.

Fourth—Any violation of the covenants, agreements, or provisions of this agreement, or any or either thereof, shall work a forfeiture of the same, and shall authorize said first party, at its option and without notice, to close said buildings and eject all persons from said premises, either with or without legal proceedings, and to take possession thereof, and said second party expressly waives all claims for damages by reason thereof.

Fifth—At the expiration of the term of this instrument, the said second party shall have the right to a ten years' renewal thereof, upon the same terms and conditions, on a request made to said parties of the first part thereof, in writing, duly served on said first party six months prior to said expiration hereof.

Sixth—Upon the termination of this license and agreement, or the period for which the same may be renewed, in case of renewal thereof, the parties of the first part shall have the option to purchase and, with that view, to request an appraisalment of all the improvements made or placed upon said premises by said second party, under and by authority of this agreement, and may or may not, as said first party shall elect, purchase all said buildings and other improvements made and erected on said premises by said second party at such appraisalment, to be made by three appraisers, to be selected, one each by

the parties hereto, and the third one by said appraisers so selected. The sum fixed as the value of said property by any two of said appraisers shall be the appraised value thereof for the purposes of this covenant, provided nothing shall be allowed for the reservoirs, and also that the value of the brick used in the walls, foundation, and chimneys of said buildings shall be deducted from the appraised value thereof.

It being understood and agreed that said second party may use not to exceed fifty thousand bricks, now on said premises, and belonging to said first party, for said reservoirs, chimneys, foundation, and walls.

In witness whereof, the said parties hereto have this — day of —, 1890, executed and delivered the foregoing instrument.

Repair of Telegraph and Telephone Lines.

We recommend that \$300 be appropriated for repair and improvement of the Lick Observatory telephone and telegraph lines. [Report of the Committee on the Lick Observatory; adopted, December 10, 1889.]

Proposed Agreement with Western Union Telegraph Company.

Regent Phelps presented from the Committee on the Lick Observatory the following proposed agreement with the Western Union Telegraph Company:

This agreement, made and entered into this — day of —, 1890, by and between the Western Union Telegraph Company, party of the first part, hereinafter for convenience called the Telegraph Company, and the Regents of the University of California, party of the second part, hereinafter for convenience called the Regents.

Witnesseth: That whereas, the Regents own a line of telegraph poles and two wires along the highway between San José, California, and the Lick Observatory, on the summit of Mount Hamilton, Santa Clara County, California, which line of poles and wires it is proposed shall be leased to the Telegraph Company.

Now, therefore, for and in consideration of the covenants and agreements herein contained, the parties hereto have mutually agreed as follows:

First—The Regents hereby lease to the Telegraph Company all of said line of poles and said two wires, together with the insulators and appurtenances thereto belonging, with the exclusive right to erect and maintain on said poles such additional wires as the Telegraph Company may deem expedient, together with the right to use and operate said poles and wires, and to enjoy the returns and profits thereof as fully and effectually as could be done by the Regents; to have and to hold the same unto the Telegraph Company, its successors and assigns, during the continuance of this agreement. The Telegraph Company agrees to maintain said poles and said two wires in good order and repair at its own expense. Upon the termination of this agreement, the Telegraph Company agrees to return said poles and two wires, together with the insulators, fixtures, and appurtenances thereof, to the Regents, in like good order and repair as when received by the Telegraph Company, ordinary wear and tear excepted.

Second—The Regents agree to furnish to the Telegraph Company at the Lick Observatory, correct time signals of the standard time of said Observatory daily, at such time as the Telegraph Company may require. The Regents hereby grant to the Telegraph Company the exclusive right to receive, transmit, deliver, and dispose of, at its own risk, such time signals from said Lick Observatory, to and at all points where the Telegraph Company may desire to use or dispose of said signals, it being understood and agreed that the Telegraph Company may make use of said time signals for its own account and benefit as the Telegraph Company may deem proper. It is, however, expressly agreed, that the Regents shall not be responsible for the accuracy of such time signals.

Third—If the Telegraph Company shall, at any time during the continuance of this agreement, establish a telegraph office for the transaction of commercial or public telegraph business at the Lick Observatory, the Regents agree to furnish suitable office room therefor, and the Telegraph Company shall furnish the necessary instruments, batteries, and supplies, and a competent and proper telegraph operator for said telegraph office, the appointment of said operator to be approved by the Regents; it being understood that the Telegraph Company shall have and retain all receipts for such telegraph business.

Fourth—In case the Telegraph Company shall establish said telegraph office at said Observatory, one of the two wires hereby leased shall be used for commercial or public telegraph business, and time signals, and the other wire may be used by the Regents and, under their direction, by their employés as a private telephone wire between said Observatory, San José, and the University of California, at Berkeley; provided, however, that no public telephone business, and no business for any person or party other than the Regents and their employés, shall, without the consent of the Telegraph Company, be sent or received over said wire after the establishment of said office at said Observatory.

Fifth—In consideration of the performance of the foregoing covenants and agreements by the Regents, the Telegraph Company agrees to transmit from its San José office, and

after the establishment of a telegraph office in said Lick Observatory, then from that office messages by, to, or for the Regents, or any of them or their employes, as may be required, and directly pertaining to and connected with the administration of affairs of said University, or of said Lick Observatory, free and without charge, and all messages for the public at usual and reasonable rates.

Sixth—The provisions of this agreement shall take effect on the — day of —, 1890, and shall be and continue in force, for and during the term of five (5) years from said date.

Seventh—It is further agreed that any failure to perform, or default in the performance of any of the covenants or obligations herein provided for on the part of said Telegraph Company, may, at the option of said Regents, be taken and deemed to be a forfeiture of this agreement and all rights thereunder, without further notice. In witness whereof, the parties hereto have caused the names of their proper officers to be hereunto subscribed, and their corporate seals to be hereto fixed and tested, the day and year first above written.

THE WESTERN UNION TELEGRAPH COMPANY.

By —, Vice-President.
—, Secretary.

THE REGENTS OF THE UNIVERSITY OF CALIFORNIA.

By —.

Regent Phelps then read the following letter:

SAN FRANCISCO, January 13, 1890.

T. G. PHELPS, Esq., Office Collector of Customs, San Francisco:

DEAR SIR: Referring to inclosed draft of proposed agreement between this company and the Regents of the University of California, I regret that I cannot approve the fifth clause, which would require this company to transmit free of charge from San José or from the Lick Observatory, all messages filed by the Regents of the University, or any of them, or their employes, pertaining to the administration or business of both the University of California and of the Lick Observatory, to all points in the United States without limit.

Such was not my understanding of the proposition made by Judge Hager and Mr. Bartlett at our last interview. The proposition made by the latter, as I understood it, required the telegraph company to transmit free of charge all messages for the Regents or their employes pertaining to the administration or business of the Lick Observatory, between the office of the Regents at San Francisco or Berkeley and San José, and the Lick Observatory, after the establishment of the telegraph office at that point.

I trust you will understand that I do not desire to make any speculation out of the proposed agreement, or, in fact, to make any profit whatever. The present telegraph line between San José and the Lick Observatory is in very bad condition, and requires immediate reconstruction to make it serviceable. The expense of rebuilding the line, and of maintaining it in good order and repair for the term of five years, will be quite large, and if the telegraph company assumes this expense, and in addition thereto transmits the messages of the Regents and their employes, pertaining to the business of the Observatory, between the Observatory or San José and San Francisco and Berkeley, I think we will be doing all that the circumstances warrant.

Under no circumstances could we assume the burden of transmitting all the messages of the Regents and their employes pertaining to the business of the University, to all points in the United States without limit.

I will be very glad if your committee will reconsider the matter.

Very respectfully,

FRANK JAYNES,
Superintendent.

Regent Phelps presented the following:

Resolved, That the Committee on Lick Observatory be and hereby is authorized to amend the lease of the telegraph line from San José to Mount Hamilton, as read, so as to meet the objections of the Western Union Telegraph Company, and after making such amendments, to execute the same on behalf of the Regents.

The foregoing resolution was amended so as to require the President and Secretary of the Board of Regents to execute the agreement with the said telegraph company.

The resolution, as amended, was adopted. [January 18, 1890.]

The Western Union Telegraph Company refused to accept the contract as amended.

Eclipse of 1890.

WHEREAS, Regent Charles F. Crocker has generously offered to bear the expense of an expedition to Cayenne, South America, to observe the total solar eclipse of December, 1889; therefore,

Resolved, That Messrs. Burnham and Schaeberle are hereby authorized to proceed, without loss of salary, on or about November 1, 1889, to Cayenne, and establish at some proper point an eclipse station, and to remain there as long as the proper observance of said eclipse and such other work in connection therewith as may be necessary, not later than February 1, 1890; *provided*, that such expedition shall be entirely without cost to the University of California, and that the safe return of all instruments belonging to the Lick Observatory, which may be used in such expedition, shall be fully insured; further, be it

Resolved, That the Director of the Lick Observatory be instructed to prepare general plans and directions for the expedition, and that Director Holden be instructed to furnish such instruments as can be spared and are necessary for use on the expedition. (Report of Committee on the Lick Observatory.)

On motion, adopted. [July 23, 1889.]

Pamphlet on Eclipse of 1890.

Regent Phelps reported that the Lick Observatory expedition to examine the recent eclipse had been successful, and submitted the following:

Resolved, That one thousand copies of a pamphlet on the eclipse of the sun of December 21, 1889, be ordered printed by the State Printer. [Adopted, January 18, 1890.]

Thanks to Regent Crocker.

Regent Rodgers offered the following:

WHEREAS, The Lick Observatory Eclipse Expedition to South America has produced results of lasting value to science; therefore,

Resolved, That the Board of Regents hereby tenders its thanks to Regent Chas. F. Crocker, for his generous and timely assistance in the matter of providing for the equipment and expenses of this expedition, and its congratulations that the results attained are so satisfactory. [Adopted, May 13, 1890.]

42. REPORTS OF THE COMMITTEE ON LIBRARY AND MUSEUM.

Exchange with President Davis.

That the Librarian be authorized to allow President Davis to take from the Library, in exchange for books, etc., donated by him to the University, duplicates (three volumes) of the reports of the U. S. Commissioner of Education for 1880, 1883-4, and 1884-5, as requested by letter of August 7, 1889. [Concurred in, September 10, 1889.]

Bids for Binding.

Resolved, That the Committee on Library and Museum be authorized to invite proposals for binding and marking books and pamphlets belonging to the University. [On motion, adopted, September 10, 1889.]

Purchase of Missing Numbers of North American Review.

That the purchase of certain missing numbers of the North American Review (N. S.) be made, as recommended by the Librarian by letter of September 4, 1889. Cost not to exceed \$12 60. [Concurred in, September 10, 1889.]

Apportionment of the Reese Fund.

An apportionment of the Reese Fund, and the purchase of books among the departments, is herewith reported:

Agriculture, Botany, Viticulture—Hilgard	\$275 00
Astronomy, Civil Engineering—Soule	200 00
Chemistry—Rising	200 00
Drawing—Kower	50 00
English Language and Literature—Gayley	300 00
Esthetics (special for this year only)—Gayley	100 00
French Language and Literature—Paget	100 00
German Language and Literature—Putzker	100 00
Greek Language and Literature—Bunnell	200 00
Geology, Physiology, Zoölogy—Joseph Le Conte	225 00
Natural History in General—Rivers	100 00
History, Politics, Social Science in general—Moses	300 00
History, Biography, Constitution, Politics—Jones	100 00
Latin Language, Literature, Archæology—Howard	200 00
Mathematics—Stringham	250 00
Mechanics, Mechanical Engineering—Hesse	200 00
Military Science—Harrison	50 00
Mineralogy, Economic Geology, etc.—Jackson	100 00
Mining—Christy	200 00
Philosophy—Howison	250 00
Physics—John Le Conte	200 00
Works of reference, sets of periodicals, works of fine art—Librarian	300 00

\$4,000 00

[Concurred in, November 12, 1889.]

Periodicals to be Subscribed For.

Regent Hager, Chairman of Committee on Library and Museum, recommended that the Secretary be authorized to subscribe for the following periodicals, to make up the amount formerly ordered for purchase of periodicals:

American Anthropologist	\$3 00
American Journal of Folklore	3 00
American Journal of Archæology	5 00
Magazine of Western History	3 20
Electrician (London)	4 50
New Review (London)	1 75
New England Magazine	3 00

\$23 45

[Concurred in, January 18, 1890.]

Books for English Department.

Regent Hager, on behalf of the Committee on Library and Museum, presented a requisition from Professor Gayley for the following books: Philolog. Society Dictionary, Part V, \$3 25; Bosworth-Toller Anglo-Saxon Dictionary, 15 shillings; and recommended that they be purchased by the Secretary. [Concurred in, February 11, 1890.]

Binding Books.

Regent Hager presented the report of the Committee on Library and Museum:

There is immediate necessity for the binding of a number of books, etc., for the Reese Library. These books will be bound under the contract lately made with the Hicks-Judd Co. We therefore recommend that the sum of \$375 be appropriated from the apportionment for the library for the binding of said books.

The apportionment was \$1,000. [Carried, February 11, 1890.]

Collection of Mollusca.

Regent Hager, Chairman of the Committee on Library and Museum, presented the following:

Resolved, That the application of Mr. O. Button, to sell to the University a collection of mollusca, be referred to Prof. Joseph Le Conte for examination, with the request that he would report his opinion to the Committee on Museum. [Adopted, March 11, 1890.]

43. DONATIONS.

UNIVERSITY OF CALIFORNIA, November 11, 1889.

Hon. HORACE DAVIS, *President of the University*:

DEAR SIR: I have the honor to inform you of the receipt by the Mining Department of the University of the gift by Mr. Eckley B. Coxe, of Drifton, Lucerne County, Pennsylvania, of a working model of his patent gyrating screen for classifying ores. This model was constructed especially for the University of California, in accordance with a promise made to me at the time of my visit to his mines in Pennsylvania in the summer of 1888. A similar model has been on exhibition at the Paris Exposition of this year. Will you kindly call this matter to the attention of the Board of Regents at its next meeting, in order that a proper acknowledgment may be made of the gift.

I am, sir, with much respect, very sincerely yours,

SAMUEL B. CHRISTY.

Read, and the Secretary was directed to transmit to the donor the thanks of the Board. [November 12, 1889.]

SAN FRANCISCO, October 1, 1889.

The honorable Board of Regents, University of California, Berkeley, Cal.

GENTLEMEN: I have the honor to offer for your acceptance the files of the San Francisco "Daily Bulletin" and Sacramento "Record-Union," from April, 1873, to the present time, which will complete the files of these now in the Library of the University. The latter were purchased from me by the late William E. Sharon, and presented by him to the University. I take pleasure in making his gift complete.

Very respectfully,

L. P. FISHER.

The gift was received, and the Secretary was directed to express to Mr. Fisher the thanks of the Board. [November 12, 1889.]

44. RELATING TO THE UNIVERSITY SITE.

Pipes of Alameda Water Company.

Regent Martin presented the following report:

The communication of Moses Hopkins, heretofore under consideration by this Board, with reference to a privilege for imbedding and carrying certain water pipes over the University ground, which was referred to the Committee on Grounds and the counsel of the Board at your last meeting, after due consideration the committee herewith beg leave to report and recommend: That a revokable license be and is hereby granted to said petitioner to pass underground over the eastern boundary of the University grounds to a point where a certain roadway intersects Strawberry Creek; thence, following said roadway southerly and westerly in the direction of Prospect Street, over the lands recently purchased from H. A. and Jane O. D. Palmer.

On motion, the following amendment to the report of the committee was adopted: "That a license revokable at the pleasure of the Board of Regents."

On motion, the following amendment was adopted: "As shown by the accompanying map."

Recommendations concurred in, and report adopted. [September 10, 1890.]

Use of the Tunnel.

Application of C. L. Hill, C. A. Klinkner, and B. C. Brown for permission to use the tunnel on the University grounds to make experiments in raising mushrooms. [Refused, November 12, 1889.]

Repair of Sidewalk.

Regent Rodgers offered the following:

Resolved, That the Committee on Grounds and Buildings be authorized immediately to cause the sidewalks on the University grounds at Berkeley to be repaired, and to provide for more comfortable quarters for students when not in class-rooms. [Adopted, January 18, 1890.]

The sidewalks were repaired, but it was found impossible to provide more comfortable quarters for students when not in class-rooms.

Reports of the Committee on Grounds and Buildings.

Street Improvements.

In the matter of the street improvements suggested by the Trustees of the town of Berkeley, we report the probable cost as instructed by the Board:

Oxford Street—grading, macadamizing, guttering, and sidewalks.....	\$6,000 00
Cost of one half to the University, \$3,000.	
Culvert on Oxford Street (brick or stone).....	2,000 00
Cost of one half to the University, \$1,000.	
Allston Way—grading, macadamizing, guttering, and sidewalks	6,000 00
Cost of one half to the University, \$3,000.	
Total cost	\$14,000 00
Cost of one half to the University, \$7,000.	

Your committee submits the following recommendations:

1. That Allston Way be improved at a cost not to exceed \$3,000. Amended so as to read: "That the north half of Allston Way belonging to the University be improved at a cost not to exceed \$3,500, by the Committee on Grounds and Buildings, if deemed advisable by them." [Concurred in as amended, March 11, 1890.]

The improvement of Allston Way will be begun about September 1, 1890.

2. That the improvement of Oxford Street be not undertaken at the present time, except in building a culvert to carry the water of Strawberry Creek. [Concurred in, March 11, 1890.]

We recommend that \$1,000 be appropriated to cover the cost to the University of building said culvert. [Concurred in, March 11, 1890.]

The culvert has been repaired. The building of a new culvert will be delayed.

3. A portion of the University site drains its water into the corner of Oxford Street and College Way, to the injury of the property in that neighborhood. This should be corrected at once.

We recommend that \$100 be appropriated for this purpose. [Concurred in, March 11, 1890.]

The work recommended by the committee has been completed.

Employment of a Painter.

Your Committee on Grounds and Buildings is of the opinion that all the buildings at Berkeley should be painted. There is constant work for one painter; we therefore recommend the adoption of the following resolution:

Resolved, That the Secretary be authorized to appoint a painter, with a salary of \$75 per month, subject to the approval of the Committee on Grounds and Buildings. [Adopted, December 10, 1889.]

The employment of a painter has been deferred.

Painting.

We recommend that the exterior of the Harmon Gymnasium and North Hall be painted; that the brick work of South Hall, the Bacon Art and Library building, and the Mechanic Arts building be cleaned

and oiled, and that the iron and wood work and roofs be painted, and that this work be done during the coming summer vacation, according to specifications to be prepared by the committee. We further recommend that the committee be authorized to advertise for bids and employ a Superintendent. The probable cost of the work here noted will be about \$3,800. [Concurred in, March 11, 1890.]

Your committee advertised for bids for painting the North and South Halls, the Bacon Art and Library buildings, the Mechanic Arts building and the Harmon Gymnasium, and on the twenty-eighth of April opened the following bids in the presence of the bidders:

No. 1. Farwell & Co.	\$2,973 00
No. 2. Wood & Bros.	3,200 00
No. 3. Geo. C. Gottung	2,245 00
No. 4. C. M. Bumbaugh	2,670 00
No. 5. M. J. Donovan	2,985 00

Each bid was accompanied by the requisite bond or a certified check. Mr. Geo. C. Gottung's bid of \$2,245 is the lowest bid, but did not include the outside attached wooden buildings of the Mechanic Arts building. He exhibited his estimates showing that he had estimated the cost of painting the attached wooden buildings of the Mechanic Arts building at \$250; that he did not understand that these attached buildings were included in the advertisement. Mr. Gottung's supplementary bid of \$250 was given in the presence of all the bidders, and no objection was made thereto. The question arises whether it is to be accepted, and this point is now referred to the Board. If the supplementary bid is to be accepted, the award should be made to Geo. C. Gottung. His total bid would be \$2,495. The next lowest bid is that of C. M. Bumbaugh—\$2,670.

The bid of George C. Gottung was accepted, and the contract awarded to him in the sum of \$2,495. [May 13, 1890.]

The greater part of the foregoing work has been finished; the remainder will be completed in July or August of the current year.

Fire and Time Alarms.

Your committee has considered the proposition to make electric fire alarms and apparatus for electric calls for class hours, and is firmly of the opinion that both ought to be established. The cost by contract would be about \$1,200; under the direction of the College of Mechanics, about \$347. We recommend that said amount be appropriated for the purchase of needed material.

On motion, \$347 was appropriated. [May 13, 1890.]

The work recommended by the committee has been partly done, and will be finished in October next.

45. REPORT OF THE LAW COMMITTEE.

Your Committee on Law recommends that the application for payment of \$72 08, on behalf of W. M. Diggins, for work done on Audubon Street, Berkeley, be denied. [Concurred in, February 11, 1890.]

Report of the Secretary accompanying the report of the Law Committee:

FEBRUARY 10, 1890.

To the Law Committee:

GENTLEMEN: In the matter of a certain bill for work done on Audubon Street, I beg leave to say:

1. That the charge is for the whole length of Audubon Street, say one thousand one hundred feet.
2. That the contractor was notified by me that the Regents would not be chargeable for any portion of said work. This notice was given him when he began work.
3. I agreed to submit the question to a committee at the start, but the contractor went on and did his work without our consent and against our protest.
4. The charge is an indirect attempt to tax the University for work done without its consent.

Respectfully,

J. H. C. BONTÉ,
Secretary.

FINANCIAL AND OTHER STATEMENTS.

1. VALUE OF PROPERTY BELONGING TO THE UNIVERSITY.

The plant at Berkeley:

13. THE COST OF THE NEW CHEMICAL LABORATORY BUILDING TO JUNE
30, 1890.

Advertising for bids for the construction of the Chemical Laboratory building	\$273 65
Labor, etc., clearing the site.....	279 00
Clerical work, copying contract.....	2 50
Salary of Inspector.....	1,140 00
Payments on account of contract price.....	15,500 00
Architect's commission.....	1,000 00
Advertising for the construction of the furniture and fittings for the Chemical Laboratory building.....	45 30
Total.....	\$18,240 45

The cost when finished will be \$70,000.

14. COST OF WATER RECEIVED FROM THE ALAMEDA WATER COMPANY, FOR
THE FISCAL YEAR ENDING JUNE 30, 1890.

For the month of June, 1889.....	\$5 96
For the month of September, 1889.....	13 74
For the month of October, 1889.....	28 16
For the months of December, 1889, and January, 1890.....	67 96
For the month of February, 1890.....	18 60
For the month of March, 1890.....	28 35
	\$162 77

15. UNIVERSITY COTTAGES.

Total cost of building cottages (October, 1874).....	\$27,226 06
Total amount received from rent, from November, 1874, to June 30, 1890.....	\$23,785 67
Total cost of repairs, from November, 1874, to June 30, 1890.....	6,694 65
	\$17,091 02

Showing the interest on the investment (\$27,226 06) for fifteen years
and eight months, to be at the rate of 4 per cent per annum—\$1,090 91
per annum.

16. PALMER HOUSE.

In purchasing the Palmer tract, \$10,000 was considered the value of
one portion of that tract, namely, the Palmer House and lot. On this
basis, and considering the expenditure as an investment, I give the per-
centage of income on the principal invested:

Cost of Palmer House and lot.....	\$10,000 00
Total amount of rent from June 30, 1888, to June 30, 1890.....	\$1,500 00
Total cost of repairs for the same period.....	465 06
	\$1,034 94

Showing the interest on the investment to be at the rate of 5.17 per cent per annum.

17. INSURANCE AT BERKELEY.

NORTH HALL.

On the frame building and foundations to same, known as the North Hall... \$80,000 00

Contents.

On portraits and photographs (in event of loss, no one portrait or photograph to be valued at to exceed cost)..... 1,000 00
On musical instruments and military accouterments..... 4,500 00
On the contents of the printing office..... 500 00
On instruments and implements for the teaching of physics, engineering apparatus, and other apparatus necessary for the purposes of the University, fixtures and furniture, and all other contents not enumerated above, while contained in aforesaid building, known as the North Hall.... 11,800 00

SOUTH HALL.

On the brick, stone, and iron building, and foundations to same, known as the South Hall..... 85,000 00

Contents.

On the contents of the rooms of the Museum of Geology, Ethnology, Zoölogy, and Paleontology..... 25,000 00
On the contents of the rooms of the Mineralogical Museum..... 25,000 00
On the contents of the Geological, Chemical, Physical, and Agricultural Lecture Rooms and Laboratories, fixtures and furniture, engine and boiler, dynamo and electric motor, and all other contents not enumerated above, while contained in aforesaid building, known as the South Hall..... 10,000 00

BACON ART AND LIBRARY BUILDING.

On the brick, stone, and iron building, and foundations to same, known as the Bacon Art and Library building..... 30,000 00

Contents.

On furniture and fixtures..... 2,500 00
On library of printed books..... 31,000 00
On paintings, busts, and bronzes, statuary and other works of art (in event of loss, no one painting to be valued at to exceed \$10,000), while contained in the aforesaid building, known as the Bacon Art and Library building..... 39,500 00

MECHANICAL ART COLLEGE BUILDING.

On the brick, stone, and iron building, and foundations to same, known as the Mechanical Art College building..... 25,000 00

Contents.

On fixed and movable machinery, tools, and other appliances and apparatus used for the purposes of the University, engines and boilers, fixtures and furniture, and all other contents, while contained in the aforesaid building, known as the Mechanical Art College building..... 21,200 00

LABORATORY OF THE COLLEGE OF MINES.

On the frame building and foundations to same, and bridgeway connected thereto, known as the Laboratory of the College of Mines..... 3,000 00

LABORATORY OF THE COLLEGE OF MECHANICS.

On the frame building and foundations to same, known as the Laboratory of the College of Mechanics..... 2,000 00

Contents.

On fixed and movable machinery and apparatus necessary for the purposes of the University, engines, and all other contents, while contained in the aforesaid building, known as the Laboratory of the College of Mechanics.. 700 00

GYMNASIUM.

On the frame building and foundations to same, known as the Gymnasium.. 7,500 00

Contents.

On the apparatus and all other contents of the aforesaid building, known as the Gymnasium..... \$1,500 00

UNITED STATES AGRICULTURAL EXPERIMENT STATION BUILDING.

On the frame building and foundations to same, known as the United States Agricultural Experiment Station building..... 7,500 00

Contents.

On apparatus and appliances necessary for the purposes of the University, furnaces, fixtures and furniture, and all other contents, while contained in the aforesaid building, known as the United States Agricultural Experiment Station building..... 750 00

STUDENTS' OBSERVATORY BUILDING.

On the frame buildings and foundations to same, known as the Students' Observatory building..... 1,500 00

Contents.

On apparatus, instruments, and appliances necessary for the purposes of the University, and all other contents, while contained in the aforesaid building, known as the Students' Observatory building..... 4,000 00

COTTAGES.

On eight cottages, an equal amount on each..... 10,000 00

STABLE BUILDING.

On the frame stable building..... 1,000 00

Contents.

On four horses (in event of loss, no one horse to be valued at to exceed \$300)..... 800 00
On harness and stable implements, while contained in the aforesaid stable building..... 80 00

Total..... \$432,330 00

All of the above described buildings situate on the University grounds, Berkeley, Alameda County, California.

The policies of insurance, covering the foregoing items, will expire February 20, 1893. Total premium, \$4,323 30; rate, 1 per cent for three years.

18. INSURANCE ON PROPERTY AT MOUNT HAMILTON.

On brick observatory.....	\$10,000 00
On brick dwelling house.....	35,000 00
On meridian circle house.....	4,500 00
On transit house.....	2,000 00
On photo-heliograph house.....	400 00
On dwelling house No. 1.....	2,000 00
On out building No. 2.....	750 00
On out building No. 3.....	50 00
On out building No. 4.....	50 00
On out building No. 5.....	100 00
On frame kitchen.....	750 00
On furniture in brick dwelling.....	2,500 00
On furniture in house No. 1.....	400 00
On kitchen furniture.....	200 00
On library fixtures and books.....	1,500 00
On chronometer, books, and cases.....	1,550 00
On fixtures.....	10,812 50
Total.....	<u>\$72,562 50</u>

\$15,000 00—Three years from February 17, 1888, at 1 per cent.....	\$150 00
2,500 00—Three years from November 5, 1888, at 1 per cent.....	25 00

Whole number acres, full paid, awaiting patents.....	4,929.51
Whole number acres, full paid, patent fees delinquent.....	580.00
Approvals, certificates of purchase not issued.....	900.00
Sold and patented by State Register.....	204.78
Remaining unsold (abandoned).....	5,658.97
	23,691.31
Total number of acres listed to the grant of 150,000 acres.....	149,919.29
Selections awaiting action at Washington.....	299.48

21. REPORTS OF THE UNIVERSITY AUDITOR, SUBMITTED TO THE BOARD BY THE FINANCE COMMITTEE.

SAN FRANCISCO, March 21, 1890.

A. S. HALLIDIE, Esq., Chairman Finance Committee of the University of California:

SIR: At the request of the Finance Committee, I have audited the books and accounts of the University of California, in Berkeley, from February, 1889, to February, 1890, inclusive (February, 1889, being the period to which my previous examinations were made). The examination embraced all books of the Land Department, Agricultural Experiment Stations, and the books for the conducting of the business of the Board of Regents of the University of California. All bills and vouchers were gone over in detail, and checked through requisition, order, minutes, voucher, draft on Treasurer, journal and cash books into the ledger ("c").

I find proper bills and vouchers for all payments made on file in the office of the Secretary—the bills and requisitions properly signed by the head of the department making the requisition, Secretary, President, Chairman of the Committee, order of purchase by Finance Committee, approval by Auditing Committee, and approval by the Board of Regents, in session, as shown by the minutes of their meetings.

Additions were gone over in all of the books (three sets), and I find all to be correct, and neatly and properly kept. At my suggestion, January 1, 1889, books of account were opened in the Land Department, consisting (besides those in use) of journal, cash, and ledger, in which all parties were charged with land purchased, thus showing in concise form the condition of land matters—the purchasers and what is due the University (subject to correction of errors and omissions by former Land Agents); these books have and are answering the purpose they were intended for.

The books opened and written up by me, January 1, 1890, for the conducting of the business of the Regents of the University of California, have proved complete in detail, simple in form, and correct as to the expense of each department.

I wish respectfully to call your attention to the insufficient room allowed for the offices of the Secretary, and to the inadequate safe or vault-room for the protection of books and papers. A fire in the building (South Hall) might result in the irreparable loss of valuable books, papers, and documents.

Herewith please find balance sheets to March 1, 1890, of the Land Department, the Agricultural Experiment Stations, and the general

books of accounts of the Regents of the University of California. All of which are respectfully submitted.

JOHN J. HERR,

Auditor of Finance Committee of the Regents of the University of California.

A. S. HALLIDIE, Esq., Chairman Finance Committee of the Board of Regents of the University of California:

SIR: I have examined and audited the books of the Regents of the University of California, consisting of the books of the "Land Department," the "Agricultural Experiment Stations," and the "General Books of Account," for the months of March and April, 1890, and find them correct.

Vouchers properly examined, approved, and audited for all payments, are on file in the Secretary's office.

Have also verified the Treasurer's report, the pass books of the savings banks (at the banks), and find the balances in the hands of Treasurer and in the banks, as shown on general ledger.

Herewith please find trial balance of general ledger to May 1, 1890. Respectfully submitted.

JOHN J. HERR,
Auditor.

Ordered spread on the minutes.

UNIVERSITY OF CALIFORNIA,
BERKELEY, June 11, 1890.

A. S. HALLIDIE, Esq., Chairman of the Finance Committee of the Regents of the University of California:

SIR: I have examined and audited the books and accounts of the Regents of the University of California, for May, 1890, and find them to be correct.

Have verified the balance in the hands of the Treasurer of the University.

During the month no change has been made (from April, 1890) in the accounts with the various savings banks, the balances being the same as then verified.

Herewith find trial balance from the general ledger for May, 1890. Respectfully submitted.

JOHN J. HERR,
Auditor.

UNIVERSITY OF CALIFORNIA,
BERKELEY, July 10, 1890.

A. S. HALLIDIE, Esq., Chairman of the Finance Committee of the University of California:

SIR: I have examined and audited the books and accounts of the Regents of the University of California, for June, 1890, and find them correct.

Vouchers, properly signed, audited, and receipted, are on file in the Secretary's office for all payments.

Have examined and verified balances in the various savings banks with which the Regents have deposited funds, and find them to be as shown in the general ledger. Herewith please find trial balances, taken from the General, Land Department, and Agricultural Experiment Stations' ledgers, for June, 1890.

Also a statement of the "Revenue account" for the year ending June 30, 1890.

Respectfully submitted.

JOHN J. HERR,
Auditor.

22. THE UNIVERSITY LIBRARY.

In this year there has been a large increase in the number of students making use of the library's resources for information and study. This increase is due not so much to the greater number of students attending the University than formerly, but to certain changes in methods of instruction, especially in the Junior and Senior Classes of the literary course, which require more library work.

1890.	A. M.			P. M.				Average.
	10.	11.	12.	1:30.	2:30.	3:30.	4:30.	
April	55.6	69.6	44.9	78.7	70.1	64.4	39.0	60.3
May	62	70.4	45.5	74.5	69.0	63.7	43.0	61.1
Term average								60.7

The nearest approach to this number was in 1888, when the term average was 48.2.

Growth.

In addition to pamphlets and maps, there are at this date (June 30) forty-one thousand three hundred and eighteen volumes in the library. For the past year the accessions were as follows:

(a) By purchase (Reese Fund)	984 volumes.
By purchase (General Fund)	23 volumes.
By purchase (German Library Fund)	1 volume.
(b) By binding of periodicals (General Fund)	1,008 volumes.
(c) By gift	321 volumes.
	876 volumes.
Total	2,205 volumes.
Pamphlets received by gift	3,636 numbers.

While the accessions have excelled those of 1888-89 by some three hundred volumes, they still fall below the average annual increase of the last ten years, and it is with earnest solicitude that the Faculties of instruction at Berkeley look forward to the time when generous appropriations from the General Fund of the University may enable the library to keep more fully abreast with the times.

The character of our purchases is the same as in the past; of a few only can we make mention as being of special interest: Preussische

Jahrbücher (63 vols.); Gregorius Nyssenius; Opera omnia, 1615; Burmeister, Denkmäler, des classischen Altertums; 'Ast, Lexicon Platonicum (rare); Du Cange, Glissarium mediæ et infimæ Latinitatis; Dant's Gesellschaft, Jahrbuch; Dadenberg, Handwörterbuch der Chemie; Bonifili, Architecture antique (photographs); Biologia Centrali-Americana (Botany complete); Alexander Pope's Works, edited by Elwin and Courthope; Gladstone's Studies on Homer; and the Mermaid series of Best Plays of the Older Dramatists.

Among noteworthy accessions by gift, are the following:

From Robert N. Cust, of London, a collection of his writings, in eight volumes.

From Hon. John T. Doyle, a copy of the Reglamento para el Gobierno de la Provincia de Californias—the reprint (itself very scarce).

From the St. Petersburg Society of Naturalists, a set of its transactions.

From Walter H. Fraser, of the graduating class (1890), twenty volumes—all very useful.

From Prof. E. S. Holden, and from the Lick Observatory, a large number of pamphlets, relating in great part to meteorology.

From Miss M. W. Shinn, of the class of 1880, a large collection of pamphlets, which includes some rare and privately printed Californiana and an extensive series of contemporary periodicals that will prove very interesting to students of journalism.

From President Horace Davis, besides numerous duplicates, one hundred and forty-eight bound volumes, and six hundred and sixty-nine pamphlets, mostly of interest to the student of United States history and politics. Through his kind offices, we have secured gifts which we credit to original donors.

Miscellaneous Gifts.—From Joseph Rosenberg, a framed photograph of Michael Reese.

From the Class of 1893, its class pin.

There has been placed in the library an elegant emblematic silver trophy for the field day relay race—a gift to the students from President Davis.

New Exchanges.

Exchange of publications has been begun this year with the Universität Jena, Universidad de Granada, Universidad de Zaragoza, and the Université Libre de Bruxelles.

Notes of Work.

Library Bulletin No. 11, "A Guide to the Literature of Æsthetics," prepared by Professors C. M. Gayley and F. N. Scott (of Ann Arbor), has appeared.

The Contents-Index of the Library, a volume of five hundred and nineteen pages, has been printed, and in this form it has proved a great assistance to students.

Library Bulletin No. 1, a combined list of periodical literature preserved in prominent libraries of this coast, has been out of print for some time. It is hoped that in 1891 a new and greatly enlarged edition of this useful guide may be issued.

Considerable table space for students has been gained in the reading-room by the arranging of current files of the scientific, technical, historical, philological, and philosophical periodicals in upright wall cases. A

handsome oak case has been provided for the reception and exhibition of trophies gained by athletic competitions and the like.

Very soon additional bookcases will be required, and the upper gallery in the rotunda should be fully furnished. Later on, the basement of the Bacon building should be made, by means of cement floors, etc., thoroughly damp-proof, and thus much space be utilized.

Art Gallery.

The number of adult visitors to the Art Gallery during 1889–90 was two thousand six hundred and thirty-one persons; the total number of visitors since 1882 being thirty thousand six hundred and forty-seven persons. For several years no additions have been made to our collection of paintings. It is to be hoped that steps may be taken to induce every California artist of note to present to the Art Gallery at least one specimen of his handiwork. It would thus become truly representative of local art, present and past, and visitors to the gallery—a large proportion of whom are tourists from the East and from Europe—would be numbered by thousands instead of hundreds. As a financial venture we believe it would prove to the artists themselves very profitable.

List of donations to the library will be found in the Appendix.

23. OFFICERS OF THE UNIVERSITY CADETS, LIEUTENANT G. F. E. HARRISON IN COMMAND.

On June 19, 1890, Brigadier-General R. H. Orton, Adjutant-General of the State of California, by order of the Commander-in-Chief, announced the following appointments, viz.:

Norman R. Lang, Colonel, with rank from June 25, 1890.
Henry G. Parker, Lieutenant-Colonel, with rank from June 25, 1890.
Henry F. Bailey, Major, with rank from June 25, 1890.
Edward H. Stearns, Captain, with rank from June 25, 1890.
David G. Jones, Captain, with rank from June 25, 1890.
Fred. W. McNear, Captain, with rank from June 25, 1890.
William S. Smith, Captain, with rank from June 25, 1890.
Guy H. Stokes, First Lieutenant, with rank from June 25, 1890.
Donzel Stoney, First Lieutenant, with rank from June 25, 1890.
Richard F. Dean, First Lieutenant, with rank from June 25, 1890.
Edward C. Hill, First Lieutenant, with rank from June 25, 1890.
Leslie R. Hewitt, First Lieutenant, with rank from June 25, 1890.
David C. Demarest, First Lieutenant, with rank from June 25, 1890.
Samuel S. Peck, Second Lieutenant, with rank from June 25, 1890.
Arthur F. Mack, Second Lieutenant, with rank from June 25, 1890.
Jabez A. Jenkins, Second Lieutenant, with rank from June 25, 1890.
Orrin K. McMurray, Second Lieutenant, with rank from June 25, 1890.

24. UNIVERSITY SITE.

The University site, embracing 245 $\frac{73}{100}$ acres, is now in reasonably good condition, as much so as is possible with the present supply of water.

The general appearance during the months of July, August, September, and October, is somewhat offensive to the eye; during the remainder of the year it is certainly very beautiful.

Fences.

We have now twelve thousand one hundred and twenty-one feet of fencing—three thousand five hundred and nineteen feet of picket, and eight thousand six hundred and two feet of wire fence, built in 1886. The picket fence needs repainting; with this exception all the fences are in good order.

The tracts of land known as the Palmer and Bailey tracts, embracing 48 $\frac{3}{10}$ acres, are not fenced; hence, there is considerable difficulty in their management.

It is deemed advisable to fence these tracts, and make separate fields so that they can be pastured, thus saving the necessity of burning off the grass during the summer.

At present we have no practical control over these lands, as they are open to all comers.

Roads.

The macadamized roads are still in good condition, showing the valuable character of the University macadam.

It is believed that the quarry should be opened for further use. The gravel obtained from the bed of Strawberry Creek is of a most excellent kind, and wears well.

The short road between the Bacon Art and Library building and the Audubon-Street bridge, has been subjected to very heavy travel for two years, and is still in good condition. Our macadamized roads would last for many years if they could be sprinkled during the dry season. Allston Way will be graded and macadamized by the first of October, 1890.

Sidewalks.

The gravel sidewalks are in good condition, while the old plank walks are rapidly breaking up. The proposed walks of stone, concrete, or bituminous rock, will be built during the fall of the current year.

A new walk will be needed along the south side of the gravel road from the Library building to Audubon-Street bridge.

Ball and Drill Grounds.

Several surveys of that portion of the grounds, commonly known as the Campus, have been made, but none of them have proved satisfactory.

The Board has approved of the proposition to level the Campus, but nothing will be done until all the parties interested shall have agreed as to the plans.

Bridges.

The two new bridges, for which appropriations have been made, have not been built.

The water in Strawberry Creek is still abundant, making it expensive to lay brick foundations. It is believed that it will be more economical to wait until the water of the creek drains off.

Strawberry Creek.

During the winter of 1889 and 1890, the rainfall was very heavy, and the debris from the mountains was carried down into the bed of the creek in the lower grounds, making it necessary to clean out a considerable portion of the creek bed.

The pollution arising from the overflow of manure from the dairies in Strawberry Valley has caused considerable inconvenience. The largest dairy of that section has been removed, and we may hope to escape a similar affliction during the coming winter.

The broken culvert crossing Oxford Street, at the west end of the grounds, has been repaired.

We have found it impossible to find stone of the proper size and quality for the construction of dams, and will be compelled to use broken rock and cement. This will add to the expense, as this kind of work cannot be well done for less than \$12 per cubic yard.

The water in the creek will probably continue to interfere with this work during the entire summer, thereby making it more expensive than we expected. It is therefore deemed expedient to delay the building of dams until the water in the creek drains off.

Forests.

The oak trees on the north side of the grounds have been trimmed, and now all the forests are in a clean and healthy condition.

About eighty acres of steep hillside land should be covered with trees. The young native oaks have been cared for, and in time will give us good forests. In the meantime, the old oaks will gradually decay.

Shrubbery.

The rooted shrubbery is doing well; nothing, however, can be added to what we have without water to keep the plants alive for a few summers.

Lawns.

We have now fifteen acres of perennial grass, which looks exceedingly well for eight months of the year, and very dreary for the remaining four months. With a sufficient supply of water these lawns would be green all the year.

Sewers.

The sewers are doing their work well. A new sewer of about six hundred and thirty feet in length will be needed to connect the new Chemical Laboratory with the main sewer. There are three cesspools for the use of the cottages on Strawberry Creek. These cottages cannot be easily connected with the main sewer.

Water Supply.

Our water supply is still inadequate to the wants of the University. During the past year we have used the water of the Alameda Water Company only during the time that the water of Strawberry Creek was polluted by the mountain dairy.

Our supply has come from the tunnel and the old reservoir.

We use only about one half of the water that flows into the old reservoir, the remainder flowing over.

The reason is obvious, and is found in the fact that the delivery pipes are too small to carry the whole amount of water.

About fifty wells have been sunk during the present summer, with varying depth of from fifty to seventy-five feet.

Thus far these wells have developed but little water.

It is deemed advisable to sink one or two deep wells—artesian—the lower end of the grounds.

One reservoir at least is needed.

It is now quite certain that the Alameda Water Company cannot supply us with an amount of water that would be practically useful on the grounds.

Buildings.

The University buildings have been put in good repair, and are being painted. All of them will be painted or oiled by the first of September.

The new Chemical Laboratory is being rapidly and well built. It will be finished about the first of October, 1890.

Amount of material used in the construction of new Chemical Laboratory, Berkeley, up to June 23, 1890:

- 1,250 linear feet terracotta.
- 550 linear feet granite.
- 2,500 linear feet flue lining.
- 2,200 linear feet sewer pipe.
- 2,500 linear feet lead pipe.
- 3,200 linear feet gas pipe.
- 2,800 linear feet galvanized iron pipe.
- 1,050 barrels of lime.
- 400 barrels of cement.
- 200 M. lumber.
- 1,150 M. brick.
- 960 tons sand and gravel.
- 12,500 square feet slate roof (California slate).
- 11,200 square feet tin roof.
- 3,300 square feet copper gutters, valleys, flushings, etc.
- 140,000 laths.
- 8,000 pounds rolled iron beams, bonds, anchors, etc.
- 500 linear feet speaking tube.
- 5,000 yards excavating and filling.
- 11,300 square feet cement floor.
- 7,500 square feet plastering.
- 2,295 days' labor to date.
- 4,585 tons of material used.
- The building covers an area of 23,256 feet (surface feet).

The following is a list of buildings much needed:

- 1. A dressing house near the cinder track.
- 2. A shed for wagons and hay.
- 3. An administration building.
- 4. A museum.

APPENDIX.

The following matters will be found in the addenda to the report:

- 1. Land Agent's report.
- 2. Donations to the library.
- 3. Bill for the more complete endowment and support of the colleges for the benefit of agriculture and the mechanic arts, etc.
- 4. Geological Survey material.
- 5. Lick Astronomical Department.
- 6. Supreme Court decision, Aurelia Pfeiffer vs. The Regents of the University of California.

The following statements will be found in the Financial Appendix:

- 1. Statement of receipts and disbursements.
- 2. Trial balance for the month of June, 1890.
- 3. Statement of bonds and mortgages.
- 4. Account with the University Fund 1-cent tax.
- 5. Condition of University Medal Fund.
- 6. Condition of Edward Tompkins Endowment Fund.
- 7. Salaries.
- 8. Fuel.
- 9. Equipment and repairs.
- 10. Advertising and printing.
- 11. Telegraphing and expressage.
- 12. Stationery.
- 13. Postage.
- 14. Land administration.
- 15. Incidental expenses.
- 16. College celebrations.
- 17. Official and lecturing expenses.
- 18. Cottage repairs.
- 19. Insurance.
- 20. Water supply.
- 21. Agricultural Experiment Stations.
- 22. College of Agriculture.
- 23. College of Chemistry.
- 24. College of Civil Engineering.
- 25. College of Mechanics.
- 26. College of Mines.
- 27. Department of Lick Observatory.
- 28. Military Department.
- 29. Department of Mineralogy.
- 30. Department of Physics.
- 31. Department of Physical Culture.
- 32. Library.
- 33. Reese Library.
- 34. German Library.
- 35. Museum.
- 36. University site improvements.
- 37. University Printing Office.

Respectfully submitted.

J. H. C. BONTÉ,
Secretary.

CONGRESSIONAL LAND GRANT OF 150,000 ACRES—REPORT OF THE LAND AGENT.

To the honorable the Board of Regents of the University of California:

GENTLEMEN: I have the honor to submit the report of the Land Agent for the year ending June 30, 1890:

RECEIPTS FOR THE FISCAL YEAR ENDING JUNE 30, 1890.

From sales of the grant of 150,000 acres	\$28,214
From interest on deferred payments due the grant of 150,000 acres	4,034
From interest on deferred payments of forfeited Seminary lands	22
From collections of \$1 25 per acre due the United States on double minimum land	1,360
From fees for applications, certificates of purchase, and patents	1,063
From fees due Secretary of State for affixing seal to patents	244
Total cash receipts	\$34,939
Number acres for which certificates of purchase have been issued during the fiscal year ending June 30, 1890	923
Number acres patented, minimum, during the fiscal year ending June 30, 1890	18,068
Number acres patented, double minimum, during the fiscal year ending June 30, 1890	1,765

ACCOUNT WITH THE CONGRESSIONAL LAND GRANT OF 150,000 ACRES.

Whole number of acres patented, minimum, to June 30, 1889	61,448
Whole number of acres patented, double minimum, to June 30, 1889	44,945
Total number acres patented to June 30, 1889	106,393
Whole number acres patented, minimum, from June 30, 1889, to June 30, 1890	18,068
Whole number acres patented, double minimum, from June 30, 1889, to June 30, 1890	1,765
Total number acres patented to June 30, 1890	126,227
Whole number acres bearing interest	11,447
Whole number acres, full paid, awaiting patents	4,920
Whole number acres, full paid, patent fees delinquent	560
Approvals, certificate of purchase not issued	900
Sold and patented by State Register	204
Remaining unsold (abandoned)	5,658
Total number acres listed to the grant of 150,000 acres	149,919
Selections awaiting action at Washington	299
Total amount of principal outstanding of the grant of 150,000 acres	\$42,484
Total amount of principal outstanding of forfeited Seminary land	320
Total	\$42,804
In hands of counsel J. B. Mhoon for collection (delinquent)	13,906
Balance not yet delinquent	\$28,897

SEMINARY AND PUBLIC BUILDING LAND GRANTS.

The records of the Land Office of the University show the following number of acres listed against the Seminary and Public Building Land Grants:

Seminary Lands.	
Marysville district	25,945.18
Sacramento district (536.09 acres sold, not listed)	400.00
Visalia district (320 acres sold, not listed)	640.00
Humboldt district (2,000 acres sold, not listed)	6,602.36
Humboldt district (480 acres forfeited to the Regents, not listed).	
San Francisco district (1,924.66 acres sold, not listed)	1,724.51
Total listed	40,432.05
Sold, but not listed	5,260.75
	45,692.80

Total number acres of grant, 46,080; leaving yet to be applied for, 387.20 acres.

Public Building Lands.	
Humboldt district	1,283.80
Visalia district	1,294.24
Stockton district (640.78 acres sold, not listed)	1,582.85
San Francisco district (320 acres sold, not listed)	none.
Marysville district	800.00
Total listed	4,960.89
Sold, but not listed	960.78
	5,921.67

Total number acres of grant, 6,400; leaving yet to be applied for, 478.33 acres.

Statement of Forfeited Seminary Land patents issued by the University of California from April 29, 1872, to June 30, 1890:

Date of Patent.	Number of Patent.	Number of Location.	NAME OF PATENTEE.	Area.
1880—Aug. 23	163	3	Francis L. Whitney	320
1882—Sept. 13	300		Robert Gardner	320
1885—Jan. 27	391	10	Henry Flock	160
1885—Aug. 28	419	11	George Champlin	80
1886—April 28	458	13	Charles W. Pierce	56.07
1887—June 29	496	4	Mrs. E. J. Atkinson	320
1889—Sept. 17	600	8	James H. Wilson and Warren Moore, assignees of Andrew Corbett	160
			Total	1,416.07

STATEMENT OF DELINQUENT PURCHASERS OF LAND UNDER THE CONGRESSIONAL GRANT OF 150,000 ACRES.

Number of Location	NAME OF PURCHASER.	Amount of Principal.	Date when Delinquent.	Years Interest is Delinquent.	Amount of Interest.
1611	Jeremiah Casey	\$320 00	May 2, 1888	1886, 1887, 1888, 1889, 1890	\$112 00
1418	Mathew Ward, assignee of Michael Joyce	320 00	May 13, 1887	1886, 1889	44 80
1363	A. Kiser	160 00	Mar. 1, 1890	1886, 1887, 1888, 1889, 1890	56 00
1461	S. M. Dihel and S. D. Paxton	640 00	Mar. 6, 1887	1886, 1887, 1888, 1889, 1890	224 00
1700	Samuel D. Paxton	160 00	May 17, 1888	1886, 1887, 1888, 1889, 1890	56 00
1680	K. H. Golden	160 00	June 1, 1888	1888, 1889, 1890	33 60
1477	C. H. English, assignee of G. W. Heald	160 00	May 2, 1888	1886, 1886, 1887, 1888, 1889, 1890	67 20
1479	C. H. English, assignee of G. W. Heald	160 00	May 2, 1888	1886, 1886, 1887, 1888, 1889, 1890	67 20
1733	James Hopkins, assignee of R. McGarvey	160 00	Sept. 6, 1888	1887, 1888, 1889, 1890	44 80
1734	James Hopkins, assignee of R. McGarvey	160 00	Sept. 6, 1888	1887, 1888, 1889, 1890	44 80
419	Charles Faalkner, assignee of F. C. Graves	720 00	Mar. 8, 1891	1887, 1888, 1889	100 80
518	Robert R. Harris	320 00	Feb. 27, 1888	1888, 1890	44 80
578	Robert R. Harris	160 00	Feb. 27, 1888	1888, 1890	22 40
686	William Clark	320 00	Feb. 27, 1888	1888, 1890	44 80
1672	Charles H. Yates	160 00	Sept. 6, 1888	1884, 1885, 1886, 1887, 1888, 1889, 1890	112 00
1738	Charles H. Yates	191 68	Oct. 23, 1889	1889, 1890	26 84
1716	R. G. Enbank	160 00	May 23, 1888	1887, 1888, 1889, 1890	44 80
420	F. C. Graves	200 00	Jan. 29, 1890	1887, 1888, 1889, 1890	80 00
1414	Volney Cushing	160 00	Feb. 7, 1886	1886, 1887, 1888, 1889, 1890	56 00
1597	Volney Cushing	160 00	May 7, 1889	1886, 1887, 1888, 1889, 1890	56 00
1564	Henry B. Old	160 00	Sept. 2, 1889	1886, 1887, 1888, 1889, 1890	20 92
710	Daniel McGann, assignee of John Brady	1,595 04	Mar. 1, 1890	1885, 1886, 1887, 1888, 1889, 1890	100 80
1809	J. H. and Duncan McNee, assignees of Thomas W. Moore	240 00	Mar. 1, 1890	1886, 1887, 1888, 1889, 1890	558 25
1810	J. H. and Duncan McNee, assignees of Thomas W. Moore	328 60	Mar. 1, 1890	1886, 1887, 1888, 1889, 1890	114 30
1798	T. H. French	160 00	Mar. 1, 1890	1887, 1888, 1889, 1890	44 80
1300	James Lynch	160 00	July 3, 1889	1889, 1890	16 80
1301	James Lynch	160 00	July 3, 1889	1889, 1890	16 80
1302	James Lynch	480 00	July 3, 1889	1889, 1890	50 40
1308	James Lynch	160 00	July 3, 1889	1889, 1890	16 80
1267	James Lynch	2,083 75	July 3, 1889	1889, 1890	218 79
1378	James Lynch	640 00	July 3, 1889	1889, 1890	67 20
1290	James Lynch	160 00	July 3, 1889	1889, 1890	16 80
1580	James K. Lynch	515 32	April 1, 1888	1888, 1889	54 12
1634	James K. Lynch	160 00	April 1, 1888	1888, 1889	10 80
1743	James K. Lynch	160 00	Mar. 1, 1890	1889, 1890	16 80
1769	James K. Lynch	165 24	Mar. 1, 1890	1889, 1890	17 84
1770	James K. Lynch	160 00	Mar. 1, 1890	1889, 1890	16 80
1771	James K. Lynch	320 00	May 26, 1893	1888, 1889, 1890	58 17
1721	C. H. English				
1737	A. A. Wheeler				
1788	A. A. Wheeler	800 00	Mar. 1, 1890	1890	56 00
1789	A. A. Masten	160 00	Mar. 1, 1890	1890	11 20
1790	N. K. Masten				
	Totals	\$13,906 73			\$2,848 56

STATEMENT OF LANDS LISTED AND CHARGED AGAINST THE AGRICULTURAL
GRANT OF 150,000 ACRES, TO JUNE 30, 1890.

DISTRICTS.	Number of Lists.	Number of Acres.
San Francisco	1, Minimum	2,085.82
San Francisco	2, Minimum	1,582.73

TO THE DEPARTMENT OF ETHNOLOGY.

ARMES, WM. D., Instructor in the English Department of the University, made the following valuable donation: Pair of deerskin socks, from Alaska; part of a wooden mask, Alaska; a well made ivory needle, from Oogliamie, Alaska; a pair of snowshoes, Oogliamie, Alaska; a large ivory harpoon-head, Wainwright Inlet, Alaska; a bone headed spear, St. Michels, Alaska; one wooden spear shaft, and a bone needle, Alaska; a small harpoon-head, Point Hope, Alaska; a pair of charms, they being two boards representing, in figures, a whale-catching scene, Point Belcher, Alaska; a deerskin Parka, or shirt, Oogliamie, Alaska; a sealskin coat, Alaska; a set of gambling implements, Fort Wrangle, Alaska; a halibut hook, Fort Wrangle, Alaska; two teeth from a Polar bear, St. Michels, Alaska; pair of large sealskin boots, Plover Bay, Siberia; pair of small deerskin boots, Julian Point, Siberia; a pair of deerskin mittens, St. Lawrence Bay, Siberia; two milk tusks of walrus, two and three quarters inches long, East Cape, Siberia; one walrus tusk, two inches long, prepared as an implement, East Cape, Siberia; five ivory carvings, East Cape, Siberia; pair of sealskin trowsers, East Cape, Siberia; a flint skin dresser with carved holder, Point Hope, Alaska; duck snares, composed of rounded pieces of ivory fastened to strings of finely twisted sinews; these are tied in bunches of five and used as an obolus, Point Hope, Alaska; a head-rope for carrying burdens, Yale, British Columbia; a carved stone pestle, Yale, British Columbia; two horn spoons, British Columbia; two wooden spoons, British Columbia; fish hooks, arranged upon a zinc spike as a sinker, Plover Bay, Siberia; an ingenious wooden rattle, having a human-like owl's face, carved upon two sides, Alaska; four miniature wooden masks, Alaska; five wooden figures and a toy canoe, Alaska; a stone skin flesher, or hatchet, Alaska; two artistically carved chopsticks, Alaska; a few small pieces of Tappa cloth, and a piece of the twig of the tree whose bark is formed into the cloth, Hawaii.

CHARLESTON, W. S., Mountain View, Santa Clara, Cal.—Sandstone pestles from Charleston Farm.

CRAWFORD, A. W.—Pestles from San José, Cal.

PALMER, THEODORE.—Obsidian arrowhead, from Santa Rosa, Sonoma County, Cal.; part of a stone pestle, Berkeley; obsidian arrowhead, Berkeley; a pale colored sandstone mortar, Berkeley; a red colored sandstone mortar, Berkeley; and a part of a conglomerate mortar, Berkeley.

RIVERS, J. J., Curator of the Museum.—Stone mortar found on the farm north of University grounds; mortar found near the north line of University grounds; mortar found on the University domain; mortar and pestle, from Centreville; mortar and pestle, from Walnut Creek, Contra Costa County, California; mortar from West Berkeley Mound; a part of a matata from mound of Shell Mound Park; twenty net sinkers, from West Berkeley Mound; eighteen imperfect examples of pestles, from West Berkeley Mound; five imperfect mortars, from West Berkeley Mound; three bottoms of mortars, broken out by the force of pounding, from West Berkeley Mound; one mortar that had been converted from a piece of a larger one, from West Berkeley Mound; sixteen whole pestles, made of various rocks, among them mica slate, sandstone, and basalt, all from West Berkeley Mound; a peculiarly formed pestle, eleven and one half inches at the pounding end, while the opposite end is reduced to an apex of one inch; this was found by J. J. Rivers, near the site of a former Indian encampment behind the Palmer residence on Strawberry Creek, Berkeley; a pestle, found on the Hillegas estate, south of University grounds; a sandstone pestle, from Shell Mound Park; pebble used as a hammer, Shell Mound Park; a stone sinker, crudely made, having three angles simply notched, Shell Mound Park; two rounded stones, possibly used as smoothing tools, from West Berkeley Mound; three naturally rounded stones, possibly used only as heated stones in cooking, West Berkeley Mound; a flat stone, six by six inches, perforated with one large hole near the thinner edge, use doubtful, West Berkeley Mound; three common pattern net sinkers, from Shell Mound Park; ten stones, of various patterns and uses, all from West Berkeley Mound; a drill of hard, black basalt, from Shell Mound Park; three drills, one made of glaucophane, and two of mica schist, all three from West Berkeley Mound; portions of four sandstone drills, from West Berkeley Mound; a small pestle, West Berkeley Mound; a notched piece of basalt, evidently used as a

gauge by which to test certain angular work, from Shell Mound Park; fishing line sinker, perforated at one end, made of serpentine rock, also, another imperfect specimen, both from West Berkeley Mound; a fishing line sinker of serpentine, from Shell Mound Park; four pieces of stone used in smoothing articles of manufacture, West Berkeley Mound; a stone relic, pointed at one end, and an obtuse shoulder worked at the other; its use is possibly that of a sinker to a fishing line, West Berkeley Mound; four carved sandstone relics, of various patterns, West Berkeley Mound; a stone drill, West Berkeley Mound; a green porphyry hammer stone, West Berkeley Mound; a very large net sinker, with groove around the center, West Berkeley Mound; a large part of a perforated net sinker, from Shell Mound Park; shell necklace of wampum, of sixty pieces, found about the skull of an Indian as it was being exhumed from the mound at West Berkeley; a stone drill of mica schist, from Shell Mound Park; two bone implements, used in the art of preparing hides, from Shell Mound Park; eight obsidian relics, from Shell Mound Park; three obsidian relics, Shell Mound Park; four obsidian relics, from Shell Mound Park; a shell ornament, from Shell Mound Park; two fine spearheads, from Shell Mound Park, one of which is six and one half inches long; five obsidian relics, from Napa Valley; a perfect example in carved stone of a trowing line sinker, from Merced River; another fine example of trowing line sinker, from Shell Mound Park; a granitic arrow gauge, from Shasta County; ten bone bodkins, from Shell Mound Park; three bone drills, from Shell Mound Park; a bone saw, from Shell Mound Park; two bone relics, from Shell Mound Park; three bones, in preparation of manufacture into implements, from Shell Mound Park; three stone relics, West Berkeley Mound; a bone saw made from the scapula of the deer, from Shell Mound Park; three wedge-shaped relics made of deer horn, from West Berkeley Mound; a bone saw made from a scapula of the deer, from West Berkeley Mound; two large bone awls made from hind and front of tibia of deer, from Shell Mound Park; some perforated mica, used as money, from Shell Mound Park; box No. 1, of mound material, consisting mostly of human bones, from West Berkeley Mound; box No. 2, mound material, containing fractured human skulls, from West Berkeley Mound; box No. 3 contains a skeleton of an Indian exhumed in 1876 at Shell Mound Park; box No. 4, mound material, human bones, from Shell Mound Park; box No. 5, mound material, human skulls, from West Berkeley Mound; box No. 6, mound material, animal bones, from West Berkeley Mound; box No. 7, mound material, contains human and animal bones, from West Berkeley Mound; box No. 8, mound material, human jaw bones, from West Berkeley Mound; box No. 9, mound material, human leg and arm bones, from West Berkeley Mound; box No. 10, mound material, the principal bones of the skeleton of an Indian killed in battle; the two iliac bones have each an arrow imbedded therein, which may be considered evidence of the last encounter, exhumed from West Berkeley Mound.

ROBINSON, GEO. PRENTISS, U. C. '91.—A Hoopa Indian baby carrier, with the face shield attached, brought from the Hoopa Reservation at Humboldt County, Cal.; a fancy basket made by Hoopa Indians; a hat plaited with fern fiber of three colors in artistic pattern and design, by Hoopa Indians; a table mat, made by Hoopa Indians; a Hoopa Indian war arrow; and a specimen of hunting arrow of the Klamath Indians.

SPERRY, J. C., Mammoth Grove Hotel, Calaveras County, Cal.—One spearhead and one arrowhead from Indian burying ground, Stockton, Cal.

TO THE DEPARTMENT OF ZOOLOGY.

ARNHEIM, JULIUS S., San Francisco.—*Terebratella transversa-caurina*, from Alaska; a vertebral column and skull of shark, also a vertebra of dogfish, both from the Gulf of California; numerous examples of crustacea from Farralone Islands; some reptiles from South America.

ARNOTT, J., Camptonville, Yuba County, Cal.—A specimen of that rare bird, *Hylotomus pileatus*.

ARMES, W. D., Instructor, University California.—A specimen of the lizard *Gerrhonotus multicarinatus*, from Strawberry Cañon, Berkeley.

BROWN, BERT, Bolsa, Southern California.—Specimen of the Great Bat, *Nyctinomus ferox*.

BUSH, MRS. A. E., San José, Cal.—Specimens of *Agraulis vanilla* from San Pedro, Cal., and of *Callidryas eubule*, from San Pedro, Cal.

CORNWALL, MISS C. I., U. C. '91.—A large specimen of stomach ball of felted hair found in a hog in Napa City.

COUGHLAN, J. H., San Francisco, formerly of the U. C.—Specimens of *Argynnis rupertis*, Behr., from Big Tree Grove, Calaveras County, Cal.; *Argynnis monticola*, Behr., Yosemite; *Graptia faunus*, Edw., Big Trees, Calaveras County; *Vanessa Californica*, Boisd., Big Trees; *Vanessa Atalanta*, Linn.; *Junonia cenia*, Hub., Big Trees, Calaveras County, Cal.

CRAWFORD, A. W., Oakland, Cal.—Specimens of the following:

Papilio phileor, Alameda County.

Papilio zolicaon, Alameda County.

Papilio eurymedon, Alameda County.

Papilio rutulus, Alameda County.

Pieris napi, Alameda County.

Anthocharis sara, Alameda County.

Colias eurytheme, Alameda County.
Argynnis callippe, Alameda County.
Melitæa chalcodon, Alameda County.
Graptia satyrus, Alameda County.
Graptia faunus, Alameda County.
Graptia zephyrus, Alameda County.
Vanessa antiopa, Alameda County.
Vanessa Californica, Alameda County.
Vanessa milberti, Alameda County.
Vanessa Atalanta, Alameda County.
Vanessa Huntera, Alameda County.
Vanessa cardui, Alameda County.
Vanessa caryi, Alameda County.
Junonia cœnia, Alameda County.
Limenitis Lorquini, Santa Clara County.
Heterochroa Californica, Santa Clara County.
Ctenonympha Californica, Santa Clara County.
Satyrus alope, var. *boöpis*, Santa Clara County.
Thecla melinus, Santa Clara County.
Chrysophanus helleoides, Santa Clara County.
Lycæna anticius, Santa Clara County.
DEAMER, W. W., Berkeley.—*Helix arrosa*, from Marin County, California.
EXCHANGE, BY.—*Papilio chresphontes*, Eastern States.
Pieris rapæ, Eastern States.
Colias meadii, Eastern States.
Terias nicippe, Eastern States.
Terias liza, Eastern States.
Terias delia, Eastern States.
Argynnis diana, Southern States.
Argynnis Alcestis, Northern States.
Euptacta hegesia, Southwestern States.
Melitæa phæton, Eastern States.
Melitæa nycteis, Northern States.
Melitæa Ismeria, Southern States.
Dimonitis ursula, Middle States.
Apatura celtis, Boisd., Southern States.
Apatura clyton, Boisd., Atlantic States.
Debes portandia, Fab., Northern States.
Neonympha canthus, Boisd., Northern States.
Lycæna Lygdamus, Doub., Michigan.
Paphia troglodyta, Fab., Arizona.
Lycæna Shasta, Ewd., California.
Lycæna melissa, Edw., Arizona.
Lycæna marina, Reak., Southern California.
Lycæna Bottoides, Behr., Colorado, California.
Lycæna Dædellus, Behr., Southern California.
Chrysophanus Thõe, Boisd., Eastern States.
Chrysophanus arota, Boisd., California.
Fenisea Tarquinius, Fab., Atlantic States.
Papilio aslerias, Detroit, Michigan.
Argynnis cybele, Detroit, Michigan.
Limenitis dissippus, Detroit, Michigan.
Pyrameis Atlanta, Detroit, Michigan.
Pyrameis cardui, Detroit, Michigan.
Graptia interrogationis, Detroit, Michigan.
Eudamus tityrus, Detroit, Michigan.
Catocala concumbens, Detroit, Michigan.
Deilephila lineata, Detroit, Michigan.
Arctia Virginica, Detroit, Michigan.
Two *Trochus clanculus (undulatus)*, Lam., Bass Straits.
Two *Trochus clanculus (flagellatus)*, Phil., Bass Straits.
Three *Australium funbratum*, Lam., Tasmania.
Four *Risella melanotoma*, Gmel., Tasmania.
One *Nerita atrata*, Chem., Bass Straits.
Three *Monodonta constricta*, Lam., Bass Straits.
Two *Cantharidus Peronia*, Phil., Bass Straits.
Four *Cantharidus badius*, Wood., Bass Straits.
Three *Cancellaria undulata*, Sby., *Spenceriana*, Desh., Bass Straits.
One *Fasciolaria coronata*, Lam., Tasmania.
Twenty *Nassa fasciolata*, Lam., Tasmania.
Fourteen *Nassa pauperata*, Lam., Tasmania.
Two *Natica umbilicata*, Quoy., Tasmania.
Twenty *Natica conica*, Lam., Tasmania.
Fourteen *Ancillaria marginata*, Lam., Tasmania.
Four *Conus Novæ-Hollandæ*, A., Tasmania.
One *Mitra glabra*, Swain., Tasmania.

Seven *Pteronotus triformis*, Roe., Tasmania.
One *Parmophorus Australis*, Bl., Tasmania.
Twelve *Cassia semigranosa* (?), Tasmania.
One *Stomatella imbricata*, Lam., Tasmania.
Sixteen *Triton subdistortus*, Lam., Bass Straits.
Thirty *Fusus ustulatus*, Roe., Tasmania.
Twenty-six *Cypræa angustata*, Gmel., Tasmania.
One *Cypræa Caputserpentis*, Linn., Tasmania.
Four *Cypræa moneta*, Linn., Tasmania.
Two *Cypræa arabica*, Linn., Tasmania.
One *Cypræa Lynx*, Linn., Tasmania.
One *Cypræa carneola*, Linn., Tasmania.
One *Haliotus navosa-rubra*, Tasmania.
KELSEY, FRANK B., Berkeley, Cal.—A fine specimen of a nest of the tree-wasp, from Roseburg, Douglas County, Oregon.
LOUCKS, MISS L. M., Brentwood, Contra Costa County, Cal.—A fine living specimen of the horned lizard, *Phrynosoma coronata*, Blainville.
MEYER, J. H., Audubon Street, Berkeley, Cal.—The following valuable reptiles: *Crotaphytus collaris*, Say., Arizona; *Sceloporus consobrinus*, B. & G., Arizona; *Cnemidophorus tessellatus*, Say., Arizona; *Uta ornata*, B. & G., Arizona.
MOUSER, DR. S. M., Berkeley Heights.—A well preserved specimen of the sunfish of the Pacific Ocean.
O'BRIEN, PAT., Rio Vista.—A specimen of the viviparous fish from the Sacramento River, *Hysteroecarpus Traskii*, Gibbons.
PALACHE, CHAS., Claremont Road, Temescal.—The following rock-boring shells: *Pholadidea ovoidea*, Gld.; *Pholadidea penita*, Conr.; *Petricola carditioides*, Conr.; *Adula stylina*, Cpr.
PALMER, THEODORE, Berkeley, Cal.—Nest of the trapdoor spider (*Cteniza Californica*).
POND, LIEUT. CHAS. F., U. S. N.—A splendid sample of the Lower California Gopher Snake (*Ptyophis vertebralis*), from Abrejos Point, Lower California.
RAYMOND, W. G., U. C.—The following marine shells:
Two *Cancellaria scolarina*, Lam., Gulf of Siam.
Three *Nassa thersites*, Brug., Gulf of Siam.
Four *Nerita chamælion*, Linn., Gulf of Siam.
Two *Natica maculosa*, Lam., Gulf of Siam.
Four *Nerita polita*, Linn., Gulf of Siam.
Three *Nerita albicilla*, Linn., Gulf of Siam.
RIVERS, J. J., Curator of the Museum.—Specimens of the new and rare lizard (*Xantusia Riversii*, Cope), from San Clemente Island, off Santa Barbara, Cal.
SCHRAM, HERMAN, Schramsburg, Napa County, Cal.—Specimen of the snake, *Ophibolus getulus-Boyllii*, which contained in its stomach the snake *Ptyophis catenifer*, that measured two thirds the length of its devourer. The act of swallowing was observed by several persons, among whom was Mr. Herman Schram, who presented the captive to our museum.
STEARNS, E. H., Oakland.—Specimen of the batrachian, *Amblystoma maculatum*, found in the cellar of a house on Eighth Street, Oakland, Cal.
TURNER, A. C., '93.—A case of Chinese insects, from Hong Kong.
WALDRON, J. H., Pueblo, Colorado.—A beautiful example of tortoise (*Cistudo ornata*), from Colorado.

TO THE DEPARTMENT OF BOTANY.

ANDERSON, C. H., '90.—Presented on behalf of Dr. W. G. Farlow, Dr. C. L. Anderson, and Prof. D. C. Eaton, FASCICULUS V. ALGÆ EXSICCATÆ AMERICÆ BOREALIS. This being the complete set up to date of this remarkable collection, all of which have been donated by the authors whose names have been mentioned above.
ROSA, R. H., Bandon, Oregon.—A large section of the *Cupressus Lawsoniana*, from Coos County, Oregon.

TO THE DEPARTMENT OF PALEONTOLOGY.

BENTON, L. E., of the U. C., Berkeley, Cal.—A specimen of a *Brachiopoda* that appears new, from the rocks at Stephens Creek, Santa Cruz Mountains.
MARTIN, G. W., Oakland, Cal.—Examples of anthracite coal, from Napa County, Cal.; some specimens of shale, and a series of the cretaceous fossil *Aucella Pichii*, all from same place, which determines the coal to belong to the cretaceous system.
MONKS, MISS SARAH P., Normal School, Los Angeles, Cal.—Diatomaceous earth, from the rocks of Rodondo Beach, Los Angeles County, Cal.
TURKINTON, R. R., Park Avenue, Alameda, Cal.—Examples of fossil shells from China.
WRIGHT, W. G., San Bernardino County, Cal.—Some cretaceous fossils from Lower California.

CONGRESSIONAL APPROPRIATIONS

FOR THE

MORE COMPLETE ENDOWMENT AND SUPPORT OF THE COLLEGES FOR
THE BENEFIT OF AGRICULTURE AND THE MECHANIC ARTS.

A bill (S. 3714) to apply a portion of the proceeds of the public lands to the more complete endowment and support of the colleges for the benefit of agriculture and the mechanic arts, established under the provisions of an Act of Congress, approved July 2, 1862.

Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, That there shall be, and hereby is, annually appropriated out of any money in the treasury not otherwise appropriated, arising from the sale of public lands, to be paid as hereinafter provided, to each State and Territory for the more complete endowment and maintenance of colleges for the benefit of agriculture and the mechanic arts now established, or which may be hereafter established, in accordance with an Act of Congress, approved July 2, 1862, the sum of \$15,000 for the year ending June 30, 1890, and an annual increase of the amount of such appropriation thereafter for ten years by an additional sum of \$1,000 over the preceding year, and the annual amount to be paid thereafter to each State and Territory shall be \$25,000, to be applied only to instruction in agriculture, the mechanic arts, the English language, and the various branches of mathematical, physical, natural, and economic science, with special reference to their applications in the industries of life, and to the facilities for such instruction.

Provided, That no money shall be paid out under this Act to any State or Territory for the support and maintenance of a college where a distinction of race or color is made in the admission of students; but the establishment and maintenance of such colleges separately for white and colored students shall be held to be a compliance with the provisions of this Act, if the funds received in such State or Territory be equitably divided as hereinafter set forth.

Provided, That in any State in which there has been one college established in pursuance of the Act of July 2, 1862, and also in which an educational institution of like character has been established, or may be hereafter established, and is now aided by such State from its own revenue, for the education of colored students in agriculture and the mechanic arts, however named or styled, or whether or not it has received money heretofore under the Act to which this Act is an amendment, the Legislature of such State may propose and report to the Secretary of the Interior a just and equitable division of the fund to be received under this Act between one college for white students and one institution for colored students established as aforesaid, which shall be divided into two parts and paid accordingly, and thereupon such institution for colored students shall be entitled to the benefits of this Act

and subject to its provisions as much as it would have been if it had been included under the Act of 1862, and the fulfillment of the foregoing provisions shall be taken as a compliance with the provision in reference to separate colleges for white and colored students.

SEC. 2. That the sums hereby appropriated to the States and Territories for the further endowment and support of colleges shall be annually paid on or before the thirty-first day of July of each year, by the Secretary of the Treasury, upon the warrant of the Secretary of the Interior, out of the treasury of the United States, to the State or Territorial Treasurer, or to such officer as shall be designated by the laws of such State or Territory to receive the same, who shall, upon the order of the Trustees of the college or the institution for colored students, immediately pay over said sums to the Treasurers of the respective colleges or other institutions entitled to receive the same, and such Treasurers shall be required to report to the Secretary of Agriculture and to the Secretary of the Interior, on or before the first day of September of each year, a detailed statement of the amount so received and of its disbursement. The grants of moneys authorized by this Act are made subject to the legislative assent of the several States and Territories to the purpose of said grants; *provided*, that payments of such installments of the appropriation herein made as shall become due to any State before the adjournment of the regular session of the Legislature meeting next after the passage of this Act, shall be made upon the assent of the Governor thereof, duly certified to the Secretary of the Treasury.

SEC. 3. That if any portion of the moneys received by the designated officer of the State or Territory for the further and more complete endowment, support, and maintenance of colleges or of institutions for colored students, as provided in this Act, shall by any action or contingency be diminished or lost, or be misapplied, it shall be replaced by the State or Territory to which it belongs, and until so replaced no subsequent appropriation shall be apportioned or paid to such State or Territory; and no portion of said moneys shall be applied, directly or indirectly, under any pretense whatever, to the purchase, erection, preservation, or repair of any building or buildings. An annual report by the President of each of said colleges shall be made to the Secretary of Agriculture, as well as to the Secretary of the Interior, regarding the condition and progress of each college, including statistical information in relation to its receipts and expenditures, its library, the number of its students and professors, and also as to any improvements and experiments made under the direction of any experiment stations attached to said colleges, with their cost and results, and such other industrial and economical statistics as may be regarded as useful, one copy of which shall be transmitted by mail free to all other colleges further endowed under this Act.

SEC. 4. That on or before the first day of July in each year after the passage of this Act, the Secretary of the Interior shall ascertain and certify to the Secretary of the Treasury as to each State and Territory whether it is entitled to receive its share of the annual appropriation for colleges, or of institutions for colored students, under this Act, and the amount which thereupon each is entitled, respectively, to receive. If the Secretary of the Interior shall withhold a certificate from any State or Territory of its appropriation, the facts and reasons therefor shall be reported to the President, and the amount involved shall be

kept separate in the treasury until the close of the next Congress, in order that the State or Territory may, if it should so desire, appeal to Congress from the determination of the Secretary of the Interior. If the next Congress shall not direct such sum to be paid, it shall be covered into the treasury. And the Secretary of the Interior is hereby charged with the proper administration of this law.

SEC. 5. That the Secretary of the Interior shall annually report to Congress the disbursements which have been made in all the States and Territories, and also whether the appropriation of any State or Territory has been withheld, and if so the reasons therefor.

SEC. 6. Congress may at any time amend, suspend, or repeal any of all of the provisions of this Act.

GEOLOGICAL SURVEY MATERIAL.

UNIVERSITY OF CALIFORNIA,
BERKELEY, January 14, 1890.

President HORACE DAVIS and *Rev.* HORATIO STEBBINS:

GENTLEMEN: In accordance with your request, we, the undersigned, have examined the material formerly belonging to the California State Geological Survey, and now at Berkeley, and we append to this report a complete inventory of all this material now held in trust for the State by the Regents of the University. The collections of the survey having been declared the property of the University by the "Organic Act," approved March 23, 1868 (see Regents' Manual, p. 41, Sec. 24), do not fall within the scope of your inquiry.

The material inventoried may be classified as follows:

- I. Printed reports and maps of the State Geological Survey.
- II. Stereotyped plates of text and illustrations of the above reports.
- III. Manuscripts, notes, maps, and drawings.
- IV. Instruments and accouterments.

All this material was delivered to the Secretary of the Board of Regents in 1874. Secretary Stearns, in his report to the Board of Regents for the year ending May 31, 1875, writes: "We received the material without an inventory; it arrived and was stored at the University before the Secretary's office was moved to Berkeley, and has been placed so as to insure its preservation."

The printed reports and maps of the Geological Survey are kept for sale by the Board of Regents in accordance with the Act of 1874. These reports and maps are now contained in boxes Nos. I to XIII, stored in the University Library, and also parcels Nos. 113 to 119, inclusive, now stored in the Secretary's office. The total amount received from the sale of these reports and maps, in fifteen years, has been only \$1,521 16, and it has steadily diminished in amount from \$335 in 1874 to \$24 50 in 1889.

In addition to the articles inventoried, there were originally a number of lithographic stones of maps. These stones belonged to the engraver, but the lithographs were preserved at the expense of the Board of Regents. The following extract from the minutes of the Board will show how they were disposed of (Minutes, Vol. V, p. 253, May 23, 1884):

Regent Winans presented the following report: The committee appointed to consider and report upon the advisability of continuing the insurance upon or the purchase of certain lithographic stones in the possession of Julius Bien, of New York, beg leave to report that it is not advisable to continue the insurance nor to purchase the stones.

This report is based upon the opinion of the State Engineer, that the work is inaccurate and not correct to date.

W. T. WELCKER,
Superintendent Public Instruction.
W. T. REID.

On motion, the report was adopted.

The instruments have been turned over to the care of the Departments of Civil Engineering, Chemistry, and Physics, where they have been in

constant use for the instruction of students and the carrying on investigations. The value of these instruments is, according to the appended inventory, about \$995, and their loss would seriously cripple these departments unless they were replaced with new ones by the Board of Regents.

In the way of accouterments, there were received two saddles, two mules, one tent, a rifle, and a shotgun. The saddles and tent have rotted long since, and the mules were sold by order of the Board several years ago. The firearms remain in the Secretary's office.

The manuscripts, notes, maps, and drawings are contained partly in boxes Nos. XIV to XVII, inclusive, now stored in the library, and partly in bundles numbered 1 to 112, and 120 to 151, in the Secretary's office. This material is in bundles, rolls, and loose sheets of all sizes and conditions. Your committee has in each case restored all articles inventoried to their original packages and numbered them on the outside in red ink. They are apparently in the same condition in which they were received.

Most of this material is of no value whatever. It is often without indorsement, or notes, or other means of identification. Much of it consists merely of tracings and reductions from published maps, which have been superseded by later and more accurate work. There are some original maps, which are of value, although most of this material has already been published by Professor Whitney. There are other papers, particularly some partly finished geological and topographical maps, which, although incomplete and often without indorsement or notes of any kind, would prove useful to any person intending to go over the same ground, as furnishing suggestions from which to outline a plan of examination.

We come, then, to the question: What is the best way to make available such of this material as has a value?

The Act to provide for the preservation of the material of the Geological Survey of California, which was approved March 27, 1874, reads as follows:

ARTICLE 85.

SECTION 1. It shall be the duty of the State Geologist to deliver to the President of the University of California, at Berkeley, in this State, all instruments, accouterments, furniture, property, maps, books, drawings, manuscripts, notes, engravings, lithographs, stones, woodcuts, field notes, and other material of every description and nature belonging or appertaining to the Geological Survey of California; such surrender and delivery to be made without delay.

ARTICLE 86.

SEC. 2. The Regents of the University of California shall safely keep and preserve, at the said University, all the property and material referred to in section one of this Act until such time as the Legislature may direct otherwise.

ARTICLE 87.

SEC. 3. The sum of five thousand dollars is hereby appropriated out of any money in the General Fund not otherwise appropriated, to pay the necessary cost of arranging, packing, transporting, and delivering the said property and material; and the Comptroller shall draw his warrant or warrants for such purpose, not to exceed said sum of five thousand dollars, when directed to do so by the State Board of Examiners, and the Treasurer shall pay the same.

ARTICLE 88.

SEC. 4. The Regents of said University shall keep on hand and offer for sale all volumes of reports and maps published by said Geological Survey; they may also, as soon as the present supply of reports and maps is exhausted, cause any portion of the same to be republished and sold at the prices now provided or that may hereafter be provided

by law; provided, that said republication shall be done without cost to the State; provided further, that the proceeds of the sale of all such maps and reports, over and above the cost of publication, shall be paid into the State Treasurer and by him credited to the School Fund of the State.

SEC. 5. This Act shall take effect immediately.

From this it appears: "Sec. 2. The Regents of the University of California shall safely keep and preserve, at the said University, all the property and material referred to in section one of this Act, until such time as the Legislature may direct otherwise." It is evident, therefore, that only an Act of the Legislature can authorize the withdrawal of any of this property from the University.

In view of this restriction, and in order that the manuscripts, notes, maps, and drawings of the Survey may be accessible for use and reference, your committee recommends that they should all be placed in the custody of the Librarian of the University as a library of reference, to which any responsible citizen of the State may have access, under the same rules which govern access to other reference works of value in the library; provided, that no person whatever shall be allowed to remove any of the articles from the University Library building.

In order that this may be more effectually carried out, we further recommend the construction of a sugar-pine or redwood case, with deep pigeon holes and shelves, in which the rolls may be safely stored under lock and key, in the order given in our inventory, or any other which the Librarian may prefer to make for himself. Also, that a rubber stamp with the device, "Cal. Geological Survey Material," be procured, and that each and every article, however small, shall be stamped by the Librarian before they are opened for public inspection and use.

Your committee would further recommend that the Legislature should be petitioned to transfer absolutely to the Board of Regents all the property of the State Geological Survey, which they now hold in trust, so that it may be used according to their best discretion. If this were done, it would be possible to use for purposes of exchange with other scientific bodies, the publications of the Survey, for which there is now a constantly diminishing sale, and many valuable works would be secured thereby, which it is very difficult to obtain by purchase.

With these recommendations we beg leave, most respectfully, to submit our report.

J. H. C. BONTÉ,
Secretary of the Board of Regents.
JOSEPH LE CONTE,
Dept. Geology and Natural History.
FRANK SOULÉ,
Dept. of Civil Engineering.
SAMUEL B. CHRISTY,
Dept. Mining and Metallurgy.
A. WENDELL JACKSON,
Dept. Mineralogy, Petrography, etc.

INVENTORY OF MATERIAL OF THE STATE GEOLOGICAL SURVEY STORED IN THE UNIVERSITY LIBRARY, DECEMBER 23, 1889.

(Boxes marked in Roman numerals in blue pencil.)

A. Publications. (Held for sale.)

- I-IV. Four boxes containing *Ornithology*, Vol. I, in sheets.
 V-VI. Two boxes, with 80 and 88 copies *Paleontology*, Vol. I; stitched, in good condition.
 VII. One box containing 100 copies *Paleontology*, Vol. I; stitched, in good condition.
 VIII. One box containing:
 Paleontology, Vol. I; 79 copies, stitched, in poor condition.
 Paleontology, Vol. II; 1 copy, stitched, in poor condition.
 Paleontology, Vol. I; 2 copies, bound, in poor condition.
 Ornithology, Vol. I; 4 copies, bound, in poor condition.
 IX. One box containing Yosemite Guide Book, in bundles.
 X. One box containing:
 Ornithology, Vol. I; 22 copies, cloth, in good condition.
 Ornithology, Vol. I; 17 copies, cloth, in fair condition.
 Ornithology, Vol. I; 17 copies, cloth, in bad condition.
 Paleontology, Vol. I; 6 copies, cloth, in good condition.
 Paleontology, Vol. I; 4 copies, cloth, in fair condition.
 Paleontology, Vol. II; 1 copy, cloth, in good condition.
 Paleontology, Vol. II; 1 copy, cloth, in fair condition.
 XI. One box containing Yosemite Guide Book, in bundles.
 XII. One box containing Yosemite Guide Book, in bundles, and a few in cloth.

B. Stereotypes of Publications.

Fifty-four unmarked boxes, with plates of text.
 Three unmarked boxes, with plates of illustrations.

C. Miscellaneous.

- XIII. One box containing nineteen copies of mounted map of Yosemite Valley and adjacent region. Hoffman & Gardner; 1863-7. (For sale.)
 XIV. One box containing Coast Survey tracings of San Francisco Bay.
 XV. One box containing thirty barometer tubes; some broken.
 XVI. One box maps; Wackenreuder's map of New Almaden; printed.
 County adjacent to San Francisco Bay, hand-colored for geology; no indorsement; no legend.
 Craven's map, Sonora Pass; original drawing; no notes; unfinished.
 Craven's map, Clear Lake; original drawing; no notes; unfinished.
 Map, Yosemite Valley and vicinity (Tuolumne River on north, Millerton on south, Coulterville on west, Mono Lake on east); some notes; no indorsements.
 Partial printed map of San Mateo County, 1868. Original platting of small area Walker River and Silver Mountain; Craven.
 Plattings and tracings of small portions of the Sierras; no notes or indorsements and in poor condition.
 XVII. Map of San Joaquin County, 1870; Jno. Wallace, surveyor; printed.
 Map of Amador County, 1866; J. M. Griffith, surveyor; printed.
 Map of Butte County, 1862; J. S. Henning, surveyor; printed.
 Map of California, 1852; C. D. Gibbs, surveyor; printed. (Rare.)
 Map of region adjacent to Yosemite Valley; mounted.

INVENTORY OF MATERIAL OF CALIFORNIA GEOLOGICAL SURVEY STORED IN THE SECRETARY'S OFFICE, DECEMBER, 1889, AND JANUARY, 1890.

(Articles marked in red ink with Arabic numerals.)

1. Minor survey MS., viz:
 - (a) Shorthand memoranda on reestablishment of survey.
 - (b) Rough pencil sketch of Stranahan's, Wrights Ferry, and Table Mountain.
 - (c) Rough pencil sketch of Heaton, Sierra County.
 - (d) Rough pencil sketch of near You Bet.
 - (e) Rough pencil sketch of Mooneys to You Bet.
 - (f) Rough pencil sketch of Little York.
 - (g) Memoranda. Le Conte's notes (?).
 - (h) Miscellaneous pencil notes.
 - (i) Colors used to designate formations in ancient auriferous gravel channels.
 - (j) Pencil calculations of contents of O'Brien's mine.
 - (k) Barometer observations, Lake Tahoe.
 - (l) Pencil sketches of blank forms for water, ditches, etc.
 - (m) Empty envelope with memoranda on outside of maps and tracings.
 - (n) Notes on triangulations, Gold Run and Smartsville.
 - (o) Two photos: Emigrant Gap Tunnel and Bear Valley.
 - (p) Memoranda of trips made in 1862.
2. MS. by Bowman on auriferous gravels.

3. Envelope containing tracings, indorsed, "of no value;" seventy-six in all, some on tracing paper, some on tracing cloth, mostly without indorsement or notes, legend, or any other means of identification.
4. Bowman's rough field notes of Coast Region:
 - I. Livermore.
 - II. Napa.
 - III. Mt. Diablo.
 - IV. San Francisco Pliocene.
 - V. Mission to Ocean.
 - VI. The Inner Gate.
5. J. G. Cooper, M.D.; Conchology of the Geological Survey of California; original MS.
6. Canals (ditches?) between Merced and Tuolumne and up to the Yosemite Valley and Big Oak Flat; two tracings.
7. Lists of Camps, 1860 to 1863, and itinerary, 1860. The camp lists are the only means of identification of a large amount of valuable specimens collected by the Survey and belonging to the University.
8. Map of C. P. R. R. Cisco to Truckee, with topography; 1,600 feet to 1 inch.
9. Route tracing, Roseville to Shasta.
10. Tracing of Central Nevada.
11. S. P. R. R. Routes through Panoche and Pacheco Passes.
12. Tracing C. P. R. R. Auburn to Colfax; 100 feet to 1 inch; topography.
13. Railroad tracing without indorsement.
14. Tracing vicinity east Humboldt Mountains.
15. Map of Monterey and vicinity; geologically colored.
16. Map of Corral Hollow; no legend.
17. Map of vicinity of Monterey; valuable.
18. Printed map of U. S. Territories from Mississippi River to the Pacific; ordered by Jefferson Davis 1853, with scanty geological notes (colored) of little geological value.
19. Tracings of route from Grass Valley to Downieville; Amos Bowman, 1871.
20. Forty-one tracings of patented claims of California gold mines; by Amos Bowman, 1872.
21. Traverses of roads from Nevada City; scale 1 inch to the mile; Alfred Craven.
22. Thirty-eight road tracings, by Amos Bowman.
23. Rough pencil tracing of North Bloomfield Mine, by Bowman; also of part of Sierra County.
24. Three Nevada County road tracings, by Amos Bowman.
25. Original plattings of Inyo and White Mountains, by C. F. Hoffman. Topography of Owens Lake and Salinas Valley.
26. Original plattings of Inyo and White Mountain trip; C. F. H., 1870, vicinity of Mono Lake.
27. First plattings of Clear Lake.
28. Geological plan and section Spanish Peak gravel deposit, by J. A. Edman.
29. Map of route from Carson City to Humboldt Mines; August, 1862.
30. Tracing official township lines, San Joaquin Valley.
31. Four tracings official township lines, from Land Office maps.
32. Four tracings, by Amos Bowman.
33. Tracings routes and railroads, by Amos Bowman.
34. Descriptions of boundaries of various counties in California.
35. Tracing "Goddard's Sonora Pass (from ?), original."
36. Seven sheets of plattings and triangulations, by Bowman & Pettee; vicinity of Smartsville and Little York.
37. Nine rough tracings, by Bowman, in vicinity of Nevada City.
38. Five tracings and five sheets, by Amos Bowman, mostly incomplete sections, in a rough form, of Pliocene rivers.
39. Original maps Tp. 16 (or 17?) N., R. 12 E. Crystal Lake, Placer and Nevada Counties; little detail.
 - Tp. 16 (17?) N., R. 13 E.; little detail; near Cisco.
 - Tp. 16 N., R. 9 E.; little detail.
 - Tp. 16 (17?) N., R. 14 E.; little detail; near C. P. R. R.; including Lytton & Finney's Camp and Palisade Lake.
40. Tp. 16 N., R. 5 E. Geography and Geology (?). Mouth of Yuba River; Amos Bowman, 1870.
 - Tp. 16 N., R. 6 E. Well executed topography; vicinity of Smartsville; no indorsement.
 - Tp. 16 N., R. 7 E. Contour map, with shading; some detail. Squirrel Creek and Penn Valley.
 - Tp. 16 N., R. 8 E. Original map, Grass Valley and Nevada City; contours and some shading, in detail.
 - Tp. 15 N., R. 5 E. Rough map in pencil; some contours and a little shading. Map of Grass Valley.
41. Thirty-six tracings of townships, etc., by Bowman and others; without indorsement.
42. Five miscellaneous tracings, by Bowman & Wackenreuder.
 - Three sheets of rough notes of Pliocene channels of the Yuba, of little value.
 - Eleven copies of township maps, from Government surveys.
43. Eleven fragments of original plattings of Mount Diablo Range. Marked "Valuable;" in bad condition.
44. MS. tablings of roads in Nevada County. "Surveyed by Bradley."
45. Seven printed county maps (Cal.); very bad condition.
46. Six fragments of colored field notes (geological); vicinity of San Francisco Bay.

48. Miscellaneous collection of tracings, etc.; reductions from existing maps to a scale of six miles to the inch.
49. Tracing proposed line of Chico and Humboldt road; badly torn.
50. Brush topography between Yosemite Valley and Mono Lake; marked, "First tracing not reliable for detail."
51. Goddard's original map topography of Sonora Pass and Mokelumne Hill; marked "Worked up."
52. Original plats Sierra Nevada, Mount Lyell and Mount Whitney; two sheets and two tracings; triangulations, but few details.
53. Tracing of topography of the boundary of Oregon and California, under Commissioner Wilson, General Land Office; brush topography.
54. State of Nevada, tracings; reduction to eighteen miles to the inch.
55. Tracing, Del Norte Copper District.
56. Tracing, coast line, near San Diego, and reduction of Bay of San Francisco.
57. Tracings, Canals of South Fork of the American River, Placerville.
58. Tracing (brush topography) of region south of Mokelumne River.
59. Tracing of triangulations of vicinity of Lake Bigler (Tahoe); brush topography; no indorsement.
60. Hand-colored geological map, vicinity Monterey; no legend.
61. Hand-colored geological map, vicinity Corral Hollow; no legend.
62. Hand-colored geological section artesian well, near Stockton; no indorsement.
63. Map of Cosumnes and Michigan Bar Canal, through El Dorado, Amador, and Sacramento Counties, Cal.; G. F. Deetken, C.E.
64. Holt's map California and Nevada; 1889.
65. Report on general characters and products of portions of Southern California, by J. G. Cooper, M.D.; thirty-five pages MS.
66. Report on explorations of islands off the southern coast of California, by J. G. Cooper; twenty-eight pages MS.
67. Report of zoological collections of the survey, by Cooper; twenty-eight pages MS.
68. Eight pages MS. Geographical distribution north range of West Coast birds, Alaska.
69. Thirty pages MS. List of Reptiles and Fishes.
70. Printed copy Geological Survey of California. Geographical catalogue of the Mollusca.
71. Smithsonian catalogue, North American Mammals.
72. Smithsonian catalogue, North American Birds.
73. Geological Survey of California catalogue, Invertebrate Fossils, West Slope United States; Part I. J. G. Cooper. Printed with notes.
74. Three tracings, Sonora Pass road.
75. Original platting, topography of vicinity of Angels Camp. C. F. Hoffman.
76. Two tracings, Nevada County, from Sacramento to Marysville, to Lake Bigler and Carson. Bishop, C.E.
77. Original topographical map, portion of Tuolumne and Calaveras Counties.
78. Original map, with brush topography, San Buenaventura County and Sulphur Mountain. (Oil region.) A. N. Wilson.
79. N. and S. section Pilot's Peak to Knights Ferry. H., 2 m. to 1 in.; V., 800 feet to 1 m.
80. Two tracings, Nevada County, etc. Atwood.
81. Upper Mariposa Big Trees; two original maps; 1867.
82. Five original maps of Hetch Hetchy Valley and Tuolumne Cañon and vicinity unfinished.
83. Original platting, near Clear Lake; in pencil. W. M. Gabb.
84. Vertical section profiles, Marysville Buttes to Mount Davidson, with elevations.
85. Plans of Princeton Mills, Mariposa County, and three other miscellaneous plans.
86. Feather River, Plumas County; meandered by Keddie; Crescent Mills to Oroville.
87. Sketches, Lander and Nye Counties, Nevada. Read and Barker.
88. Six tracings from maps of Arizona; compiled in Williamson's office in 1886. Used in Pacific States map.
89. Boundary between Plumas and Sierra Counties, by A. W. Keddie.
90. Miscellaneous profiles; no legend.
91. Old topographical sketch of the Washoe region.
92. Tracing of surveys near Rancho Santa Ana, Los Aquillas, by W. F. Lewis.
93. Reduction of U. S. surveys near Georgetown and Michigan Bluff, to scale of one half inch to one mile. C. F. Hoffman. Marked, "Valuable; not worked up."
94. Geological section in San Mateo County.
95. Ditches along N. Yuba and near Camptonville; one tracing.
96. Three fragments of printed maps, vicinity of San Francisco Bay, with some geological notes.
97. Township tracings, vicinity of Auburn.
98. Miscellaneous memoranda, mostly in shorthand.
99. Small "Specimen Maps."
100. Approximate contours of lower portion of cañon of Strawberry Valley, site proposed dam and reservoir.
101. Tracings from Central California map, made for Pacific States map, 1866.
102. Sonora Pass. Goddard. Marked, "Worked up."
103. Survey boundary line between California and Nevada; scale, six miles to the inch; 1863; by Butler Ives, Com. Nev. Ter.; J. F. Houghton, Surveyor-General of California; J. F. Kidder, engineer in charge of survey.

104. Wilson and Fohr's map of Nevada; corrected.
105. Gravel mining region of Sierra Nevada, vicinity of Marysville, Nevada City, etc.; original of map already published by Professor Whitney.
106. Geological map of California; partly colored.
107. Gravels of Sierra Nevada; general map; well executed.
108. Reduction of Amador County maps.
109. Plattings of Desert Creek.
110. Tracing geological map, Mono Lake to Monitor Mountains.
111. Tracing geological map, Walker River region; slight notes.
112. Partly colored geological map of Lower California.
113. One hundred and twenty-five copies, thin paper, S. W. cor. maps Central California. (Held for sale.)
114. One hundred and thirty-five copies, thin paper, S. E. cor. maps Central California. (Held for sale.)
115. Forty-six copies, thin paper, N. half maps region of San Francisco Bay. (Held for sale.)
116. Fifty-one copies, thin paper, S. half maps region of San Francisco Bay. (Held for sale.)
117. Ninety-six copies, thick paper, S. W. cor. maps Central California. (Held for sale.)
118. One hundred and one copies, thick paper, S. E. cor. maps Central California. (Held for sale.)
119. Seven copies Geological Survey maps of California on thick paper; 1873. (Held for sale.)
120. Bundle of thirty-seven fragments or mutilated copies of printed maps.
121. Original (?) map, Monterey to Santa Barbara Channel, by Geological Survey of West Coast of California.
122. Bundle of forty-four miscellaneous printed maps; mostly duplicates, and many mutilated.
123. Stearns on Upper Tuolumne Cañon; several copies; printed.
124. North Pacific Ocean Coast Chart, 1849. E. & G. W. Blunt, N. Y.
125. Humboldt County map, 1865. Doolittle. Mounted.
126. Mounted map of region forty miles around San Francisco Bay. Ransome; 1860.
127. Britton & Rey's map of California; third edition, showing routes of the Geological Survey.
128. Map of copper region, Del Norte County. R. B. Randall; 1863.
129. Copper mines, Calaveras County. Handy & Wallace; 1864.
130. Map of Lower Oregon and Upper California. Thomas Tennent; 1863.
131. Geological map (no geology) of California, by Whitney; thirty-six miles to one inch.
132. Las Mariposas estate, Max Strobel, engineer; with veins marked.
133. Lot of fragments of miscellaneous maps.
134. Land office map of California and Nevada; 1866.
135. Cravens' work on Sweetwater Mountains; marked "Worked up on Central Map."
136. Photograph of map of Mount Diablo region.
137. Three tracings; two of Mokelumne River, and one of Humboldt River; latter badly torn.
138. Nineteen photographs, illustrating Hayden's Survey of the Territories.
139. Two photographic portraits.
140. Photo of topographical map of Eureka Lake Water Company's Improvements, 1863, by H. Hochholzer.
141. Geological sketch map, very rough, with no means of identification, possibly vicinity of Washoe Peak.
142. Map of property of Tide Land Reclamation Company. J. T. Gibbes; 1869.
143. Barometrical and thermometrical profiles at Smartsville.
144. Thirty-two U. S. Coast Survey maps of coast lines in California and Oregon.
145. County map, Amador County. J. M. Griffiths; 1866.
146. Sheet with some triangulations; unknown locality; no notes.
147. Description of panorama from summit of Mount Davidson.
148. Tracing in vicinity of Lake Mono.
149. Pencil sketch of coast line.
150. Township sketch in vicinity of Honey Lake.
151. Map of Comstock Mining District, marked "U. T." Sherwood & Dewey; no date; torn in half.

LIST OF INSTRUMENTS RECEIVED FROM THE CALIFORNIA GEOLOGICAL SURVEY, AND NOW IN USE IN THE DEPARTMENTS OF CIVIL ENGINEERING, PHYSICS, AND CHEMISTRY.

Seven Greene's mountain barometers, No. 12, at \$60.....	\$420 00
Seven sling cases for same, at \$10.....	70 00
One tripod for suspending same.....	10 00
Two aneroid barometers, at \$35.....	70 00
One mountain transit, at \$325.....	325 00
Two magnetic compasses, at \$50.....	100 00
Total.....	\$995 00

In the Secretary's office, one rifle and one shotgun.

NOTES ON THE LICK ASTRONOMICAL DEPARTMENT OF THE UNIVERSITY OF CALIFORNIA.

PERSONNEL OF THE LICK OBSERVATORY.

The organization of the Lick Observatory is:

HORACE DAVIS, LL.D.	President of the University
EDWARD S. HOLDEN, LL.D.	Director and Astronomer
SHERBURNE W. BURNHAM, A.M.	Astronomer
JOHN M. SCHAEFERLE, C.E.	Astronomer
J. E. KELLER, A.B.	Astronomer
E. E. BARNARD, A.M.	Astronomer
A. J. BURNHAM	Secretary
JOHN McDONALD	Machinist
JOSEPH ROBAN	Janitor
CHRIS. MCGUIRE	Laborer
HUGH KENNEDY	Laborer

VISITORS TO THE OBSERVATORY.

The following regulations for visitors to the Observatory are in force:

HOURS FOR VISITORS TO THE LICK OBSERVATORY.

The Observatory buildings will be open to visitors during office hours every day in the year. Upon their arrival, visitors will please go at once to the visitors' room and register their names.

An hour or so can be profitably occupied in viewing the various instruments, and the rest of the stay can be well spent in walks to the various reservoirs, from which magnificent views of the surrounding country can be had. At least an hour and a half of daylight should be allowed for the drive from the Summit to Smith Creek. There are no hotel accommodations at the Summit.

Admission of Visitors at Night.

For the present, visitors will be received at the Observatory to look through the great telescope every Saturday night, between the hours of seven and ten, and at these times only.

Whenever the work of the Observatory will allow, other telescopes will also be put at the disposition of visitors on Saturdays between the same hours (only).

At 10 p.m. the Observatory will be closed to visitors, who should provide their own conveyance to Smith Creek, as there is no way of lodging them on the mountain.

It is expected by setting apart these times for visitors (which allow freer access to the Lick Observatory than is allowed to any other observatory in the world) that all interested may be able to arrange their visits in conformity to them; and that the remaining hours of the week will be kept entirely uninterrupted, in order that the Astronomers may do the work upon which the reputation and the good name of the Observatory entirely depend.

About seven thousand persons per year visit the Observatory. Those who come in the daytime are shown through the various buildings, and the uses of the different instruments are explained to them. Whenever the sky is clear they are shown a planet or a star (in the daytime through the 12-inch equatorial. On Saturday nights the number of visitors ranges from forty to two hundred and fifty. Each person is shown the most interesting celestial objects through the 36-inch and the 12-

inch equatorials. The whole force of the Observatory is on duty at this time, and as long as visitors remain.

The Senior Classes in Astronomy, in various California Colleges, have been specially invited to visit the Observatory on special evenings set apart for them.

Lectures by the Astronomers have been given at various places. The Astronomical Society of the Pacific (which now has about two hundred and fifty members) holds three meetings a year at Mount Hamilton.

In these (and other) ways the Lick Observatory is made directly useful to the public of California, and it cannot fail to have an important place in the intellectual advancement of the State and of the whole country.

This is not the place to speak of the more strictly scientific activity of the institution. It may not be inappropriate, however, to state that since June 1, 1888, the Astronomers of the Observatory have printed more than one hundred and forty separate memoirs and articles in the various scientific journals.

METEOROLOGICAL OBSERVATIONS AT MOUNT HAMILTON.

In order to exhibit the nature of a severe winter at Mount Hamilton, I select the following:

METEOROLOGICAL OBSERVATIONS FOR THE MONTHS OF NOVEMBER AND DECEMBER, 1889, AND JANUARY AND FEBRUARY, 1890.

(From November first to fifteenth, the weather was mostly clear or fair. The present record commences with the sixteenth. The mean annual barometer is 25.766 inches.)

DATE.	Mean Daily Barometer—Inches.	Rain or Melted Snow—Inches.	FOR TWENTY-FOUR HOURS ENDING AT NOON.		Remarks.
			Maximum Velocity of the Wind—Miles.	Total Movement of the Wind—Miles.	
November 16, 1889	25.81	—	60	159	Clear.
November 17, 1889	25.77	—	50	142	Fog.
November 18, 1889	25.61	.73	37	542	Rain.
November 19, 1889	25.80	.91	28	382	Rain.
November 20, 1889	25.82	1.66	17	259	Rain.
November 21, 1889	25.87	.15	24	312	Clear.
November 22, 1889	25.69	.14	30	638	Fog.
November 23, 1889	25.77	.60	28	282	Cloudy.
November 24, 1889	25.85	—	10	119	Clear.
November 25, 1889	25.95	—	30	285	Clear.
November 26, 1889	25.81	—	33	564	Fair.
November 27, 1889	25.63	—	60	880	Cloudy.
November 28, 1889	25.58	—	60	821	Cloudy.
November 29, 1889	25.60	.06	50	841	Cloudy.
November 30, 1889	25.60	.21	33	510	Cloudy.
Sums	—	4.46	—	—	—

DATE.	Mean Daily Barometer—Inches.	Rain or Melted Snow—Inches.	FOR TWENTY-FOUR HOURS ENDING AT NOON.		Remarks.
			Maximum Velocity of the Wind—Miles.	Total Movement of the Wind—Miles.	
December 1, 1889	25.57	.70	26	772	Rain.
December 2, 1889	25.71	.34	33	767	Fog.
December 3, 1889	25.70	.29	30	328	Fog.
December 4, 1889	25.57	.63	43	756	Rain.
December 5, 1889	25.52	.53	60	775	Rain.
December 6, 1889	25.49	1.01	37	561	Rain.
December 7, 1889	25.71	1.50	50	736	Rain and fog.
December 8, 1889	25.62	.94	18	290	Rain.
December 9, 1889	25.82	.21	37	503	Fog.
December 10, 1889	25.60	.59	50	630	Rain.
December 11, 1889	25.51	.62	43	705	Rain and fog.
December 12, 1889	25.56	.04	17	231	Fog.
December 13, 1889	25.71	.17	14	226	Fog.
December 14, 1889	25.74	-----	17	164	Fog.
December 15, 1889	25.78	-----	10	167	Clear.
December 16, 1889	25.77	-----	43	372	Cloudy.
December 17, 1889	25.72	.58	24	245	Rain and partly clear.
December 18, 1889	25.69	.08	43	513	Snow.
December 19, 1889	25.83	.71	30	459	Rain.
December 20, 1889	25.79	1.53	60	400	Rain and fog.
December 21, 1889	25.54	.05	60	-----	Fog.
December 22, 1889	25.45	.19	-----	-----	Snow.
December 23, 1889	25.31	.04	-----	-----	Snow.
December 24, 1889	25.41	.58	-----	-----	Rain and fog.
December 25, 1889	25.65	.78	-----	-----	Rain and cloudy.
December 26, 1889	25.71	.06	22	501	Fog.
December 27, 1889	25.75	.03	20	254	Fair.
December 28, 1889	25.82	.08	26	287	Fog.
December 29, 1889	25.95	.35	24	291	Rain and cloudy.
December 30, 1889	25.74	.10	28	386	Fog.
December 31, 1889	25.68	.56	33	459	Rain and fog.
Sums	-----	13.19	-----	-----	-----
January 1, 1890	25.64	-----	15	269	Fog.
January 2, 1890	25.50	.60	50	-----	Rain.
January 3, 1890	25.35	-----	-----	-----	Snow.
January 4, 1890	25.39	-----	-----	-----	Snow.

*After this date the anemometer was frozen so that no record was obtained.

The total *snowfall* was for December, twenty-nine inches, for January, fifty-one inches, for February, sixty-six inches; or *more than twelve feet of snowfall* for these three months. Snow fell as late as April 18, 1890. During five days of February absolutely no connection with the outside world was *possible*. In the one hundred and twelve days, from November fifteenth to March eighth, the stage only came to the Observatory thirty-six times.

CONDITION OF THE OBSERVATORY BUILDINGS.

The severe winter of 1889-90 has been very hard upon the buildings of the Observatory. In particular all the brick work has suffered greatly. The frost has removed a great deal of the mortar from exposed brick walls, and it will be necessary to repoint all joints in much exposed portions, as well as to repaint most of the walls. Wherever the bricks were thoroughly soaked in oil before they were laid (as in the walls of the great dome and of the brick dwelling houses), the mortar and the paint has stood very well. Wherever this precaution was neglected, the walls are in a very bad condition and must be repointed and repainted, as I have said.

Main Building.—The condition of its walls is described above. Its tin roof has suffered greatly, and wherever the old lead flashings were left (as about the skylights, chimneys, etc.) there have been bad leaks,

as it was evident there must necessarily have been. The worst places have lately been repaired, but the roof will leak until all such defective arrangements are made right. This is an important matter, as the instruments and the clocks are exposed to the danger of rusting. One spot of rust on the works of a delicate astronomical instrument will ruin it.

Great Dome.—This building has stood the severe trial of the winter in an admirable manner. The movable parts must be repainted in 1890. The moving-floor and the rams and water-engines are in good condition, though they need a thorough inspection and overhauling.

The small dome is in excellent condition.

The other buildings on the summit are also in good condition. The brick dwelling house is so likewise, except for a few leaks in its roof. The windmill has been twice broken by storms during 1889-90, and it will need to be replaced shortly.

New Buildings Required.—It is very desirable to erect a woodshed, 32x8 feet, at the springs, to keep the wood for the steam engine dry. One of the same size should be provided at the summit for the use of the Observatory. It would be a great accommodation to the many visitors to the Observatory if a shelter for their horses against the blazing sun could be provided.

The Tomb of James Lick.—Nothing has been done to make the surroundings of the tomb of the generous founder of the Observatory suitable and appropriate. This matter is still in the hands of the Lick Trustees.

CONDITION OF THE INSTRUMENTS.

The instruments are all in capital condition, and are all in active use. The work spoken of in my last report (pp. 129-130), has mostly been done. There still remain the following essential matters:

First—A water wheel should be provided to wind the weight of the driving clock (six hundred pounds) of the greatest equatorial. At present this is wound by the Observer every two hours. From this severe labor he must return with steady nerves (if possible), to making delicate micrometer measurements at the telescope.

Second—The circles of the great telescope are now (and have always been so far) useless, for lack of arrangements to light them by electricity. The Lick Trustees intended to provide these, but did not do so.

Third—A double image micrometer should be provided for the great telescope.

Fourth—A control for the driving clock of the 12-inch telescope is needed.

An appropriation from the principal of the Lick Observatory Endowment Fund should be made to cover these four items.

ADDITIONS TO THE INSTRUMENTS.

The National Academy of Sciences has lent to the Observatory a powerful spectroscope, which will be used to investigate the spectrum of the zodiacal light.

An appropriation of \$200 has been made from the Thompson Fund of the American Association for the Advancement of Science, which

sum is to be used in the construction of a special spectroscope for the examination of variable stars.

A large eye-piece, with a field of view sufficient to take in the whole moon, has been fitted to the great telescope for the use of visitors.

The U. S. Naval Observatory of Washington has lent to the Observatory a 6½-inch photographic telescope and mounting.

Hon. C. F. Crocker has authorized the construction of an equatorial mounting, to carry the Willard photographic lens, which he presented to the Observatory in 1889.

Hon. William M. Pierson, of San Francisco, has lent to the Observatory a Dallmeyer photographic lens, which will be temporarily mounted alongside of the Willard lens.

In this way, by the gifts and by the loans of friends of the Observatory, the small deficiencies in its equipment are gradually being supplied.

POST OFFICE AT MOUNT HAMILTON.

On the recommendation of the Regents of the University a Post Office has been established at the Lick Observatory under the name of *Mount Hamilton*. Prof. S. W. Burnham has been appointed Postmaster.

SOLAR ECLIPSE OF DECEMBER 21, 1889.

In the summer of 1889 Hon. C. F. Crocker generously volunteered to bear the expense of an expedition to Cayenne, South America, to observe the total solar eclipse of December twenty-first. The Regents of the University authorized Messrs. Burnham and Schaeberle to do the work according to the programme prepared by the Director, and provided most of the instruments. The Superintendent of the U. S. Naval Observatory at Washington, Captain R. L. Phythian, U. S. Navy, was kind enough to lend to the expedition a 6½-inch photographic equatorial, and F. G. Bluin, Esq., of East Oakland, put the whole equipment of his observatory at our disposition. From his instruments a sextant was selected, and used to determine the latitude and longitude of the eclipse station.

Parties were sent to observe this eclipse as follows:

- I. By the Government of the United States to Africa.
- II. By the British Government to Africa.
- III. By the British Government to South America.
- IV. By the French Government to South America.
- V. By the Lick Observatory to South America.

Parties I and II failed on account of cloudy weather. Parties III, IV, and V were, on the whole, successful, though the weather was not altogether satisfactory.

From what is already known of the results, it is certain that the photographs of the Lick Observatory party are the most satisfactory of any secured at this eclipse, and this success reflects credit upon all concerned in the expedition.

The results of the work will be printed (in octavo) at the State Printing Office.

GOLD MEDAL AWARDED TO THE LICK OBSERVATORY AT THE PARIS EXPOSITION.

A gold medal was awarded to the Lick Observatory at the Paris Exposition for its exhibit of astronomical photographs.

BRICK RETAINING WALLS.

As recited in my previous report (page 130), the rock walls built by the Lick Trustees are rapidly crumbling into dust. They should be replaced by brick walls as soon as practicable. The slopes of the summit are gradually sinking, and they must be planted with vines, etc., to consolidate them. In places the outer edges of the summit level are from two to three feet lower than they were a year ago. This is a very practical matter, and it demands immediate attention.

WATER SUPPLY.

There is little to add to the complete account given in my last report (p. 130).

The springs during the winter supply twenty thousand to twenty-five thousand gallons daily, which now goes to waste for lack of storage capacity, which ought to be provided. During the summer the supply falls to four hundred gallons daily. The daily necessary expense is from one thousand to one thousand two hundred gallons. Every year the astronomers of the Observatory have been forced to use some of the stored rain water for domestic purposes. This water has passed many times through the hydraulic engines and rams, and is covered with a thick film of machine oil; and it invariably produces more or less sickness when it is used. Under the present circumstances it *must* be used. It is not fair to the officials of the Observatory to subject them and their families to this hardship, when the remedy (increased capacity of storage reservoirs) can be so readily and so cheaply attained.

Water Pipes, etc.—The system of under and over-ground pipes (which is several miles in extent) is being simplified and put in good condition by the workmen of the Observatory as fast as possible. The kind of simplification referred to may be understood when I say that a single valve and fifteen feet of pipe, lately inserted, saves more than fifty miles of walking to the machinist each and every year. The fire plugs and hose are regularly inspected each week.

BOUNDARIES OF THE RESERVATION.

Many of the corners have been permanently marked with iron posts and this work will be continued. The Legislature should be asked for an appropriation of \$2,700 to put a continuous fence about the whole reservation (one thousand nine hundred acres).

GIFTS TO THE LICK OBSERVATORY.

Besides the gifts (and loans) of instruments previously mentioned the following have been received, for which the thanks of the University are gratefully returned:

BRASHEAR, J. A.—Photographs.
CENTURY, Editor of—Electrotype.
HIMMEL UND ERDE—Electrotypes.
HOLDEN, E. S.—Nine crayon drawings of Jupiter.
WHITNEY, R. W.—One duplicator, or copying machine.

PERIODICALS RECEIVED BY THE LIBRARY OF THE LICK OBSERVATORY.

A full list of periodicals received by gift or otherwise is given in my last report (page 134). This list need not be repeated here, especially as it will be fully set forth in the catalogue of the library, which will shortly be printed at the State Printing Office as an appendix to the report of the Solar Eclipse of December, 1889.

Books have been received by gift from the following persons:

SUPREME COURT DECISION.

IN BANK.

[Filed November 18, 1887.]

AURELIA PFEIFFER, PLAINTIFF AND APPELLANT,
vs.THE REGENTS OF THE UNIVERSITY OF CALIFORNIA, DEFEND-
ANT AND RESPONDENT.

No. 11,772

This is an action to quiet title to a certain piece of land; to enjoin defendant from diverting any water from said land; and to recover damages for past diversion of such water. The action was tried in the Court below without a jury, and judgment went for defendant. Plaintiff appeals from the judgment and from an order denying her motion for a new trial.

The material facts in the case—omitting certain deraignments of title and other matters which need not be recited here—are these:

1. In 1865, plaintiff became the owner in fee of a certain undivided interest in "two thousand nine hundred acres or thereabouts" of mountain or hill land in Alameda County, California. This land was a part of the Rancho San Antonio, granted by the Mexican Government in 1822 to Louis Peralta, and confirmed to his sons and grantees by a patent of the United States Government, dated February 10, 1877. Plaintiff continued to be the owner of said undivided interest until the year 1875 when a certain partition suit entitled "Le Roy vs. Gwinn et al." was instituted in the proper District Court for the purpose of terminating the co-tenancy of the various owners of undivided interests in said land and apportioning it among said owners in severalty. A judgment was rendered in said partition suit on the twenty-first of August, 1875, by which the particular land described in the complaint in this present action, and which is designated as "Plot O," was set off in severalty to plaintiff. She was put into possession of said "Plot O" by the Sheriff, and has been in possession ever since, except so far as her possession has been interrupted by defendant as hereinafter stated.

2. On August 10, 1864, Owen Simmons and wife, being also the owners in fee of an undivided interest in said two thousand nine hundred acres of land, conveyed the same to the College of California, a corporation, who remained the owner thereof until June 1, 1870, when it conveyed said undivided interest to the defendant herein, the Regents of the University of California. At the time of said conveyance by Simmons and wife to the College of California, said Simmons was in the actual occupancy of that part of said land described in the complaint which contains the springs of water about which this litigation has arisen—although he was only an owner, as tenant in common with others, of an undivided interest in the whole tract of two thousand nine hundred acres, which fact was well known to the college. After the

conveyance to the college, the latter remained in occupancy of said piece of land until its conveyance to the defendant on June 1, 1870. This particular part of the land was wet and springy. It has several springs on it, which usually sunk into the ground within short distances from their sources. In 1866 the college commenced to clear out two of said springs; and within a year or two, by excavations, etc., it developed a stream of water, which, by means of flumes, pipes, reservoirs, etc., it converted and conveyed entirely away from said undivided lands onto other lands held by said college in severalty. The college, and its successor, the defendant, continued to so divert and convey said water from 1866 until after the judgment in said partition suit in 1875, without any interference or complaint by any of their co-tenants. In developing this water, and in erecting works for its diversion, the college and the defendant expended about \$17,000. After the judgment in partition, which set off this piece of land in severalty to plaintiff, she protested against any further diversion of the water by defendant, demanded payment for it, etc. She commenced this action within a day of the expiration of five years after the issuance of the patent.

3. On the twenty-eighth day of November, 1870, the defendant executed to Mary E. Brayton a conveyance of all its interest in said undivided tract of two thousand nine hundred acres of mountain land. Said conveyance also describes three other tracts of land not involved in this controversy, and has in it the following clause: "Excepting and reserving out of and from this conveyance, and out of the premises firstly, secondly, and fourthly above described, the right of the water arising upon or flowing across the same, so far as it shall be needed for the University of California, and the right to enter upon said land for the purpose of constructing and laying the necessary pipes and making the same available, the same to be exercised in such manner as not to interfere with the use and occupation of the land for cultivation, and to do no damage to the crops thereon." Mary E. Brayton afterwards conveyed to H. G. Livermore, who was made a party to said partition suit, and had set off to him a certain part of said two thousand nine hundred acres designated as "plot H." (The word "fourthly" in said clause of reservation refers to said undivided interest in said two thousand nine hundred acres.")

4. There is another fact which must be here stated, because, while it has no direct reference to the land or water described in the complaint, it has a bearing on the question, Who were necessary parties to the partition suit? Z. B. Heywood, being the owner of an undivided interest in said tract of two thousand nine hundred acres, and having entered upon the occupancy of a certain part of it called "Ramsey Ranch," on the fourth day of September, 1860, executed a deed to the President and Board of Trustees of the College of California, by which he gives, grants, bargains, sells, and quitclaims to them "the exclusive right in perpetuity to enter upon my land known as the Ramsey ranch, being a portion of the Rancho San Antonio in the county of Alameda, California, and thereon to collect and take away, with the reservations hereinafter mentioned, the waters of the various springs which open into and along the gulch and ravine, and its branches that debouch at or near the point where the present road crosses the boundary line between Sections 83 and 84, as laid down in Kellersberger's map; and also of the said springs above said ravine that rise to the southward of and run past

and near my present farm house, and for the purposes aforesaid to take, hold, use, occupy, and clear up so much of said land as may be proper and necessary for collecting said waters in basins or reservoirs, or for flooding by dams, and for canals and conduits and the laying of pipe, and the right at all times to enter upon so much of said lands as the convenience may require for all the purposes aforesaid, and for repair or viewing the same, and the right to protect said waters from waste or damage by such works, and in such manner as they may judge best. The reservations referred to are not material. Heywood remained owner of said undivided interest until the commencement of said partition suit was made a party thereto; and had set off to him in severalty a part of said two thousand nine hundred acres designated as "Plot P," said "Plot P" including the said Ramsey ranch. On the twenty-sixth day of November, 1869, the said President and Board of Trustees of the College of California conveyed to "the State of California, represented by the Regents of the University of California," all the rights and property (if any) which were conveyed to the former by said deed of September 1860, executed by said Heywood as aforesaid. Neither the State of California nor the defendant was made a party to said partition suit.

5. The defendant continued to divert water from said "Plot O" from the time plaintiff became several owner thereof until the trial of this present action, and to convey the same to its University lands, which never were part of said two thousand nine hundred acres of mountain land. The Court below finds that for three years and ten months immediately preceding the trial the defendant so diverted and used ten thousand gallons per day, in addition to water sold by it to others, for which it received \$4,804, but it is not found how much plaintiff was injured by such diversion. It appears from the findings that defendant has taken the water from only two springs on said land, and that there are several other springs on the land, which seem not to have been developed or used in any way by plaintiff.

Upon these facts the Court below rendered judgment for defendant upon the sole ground—as stated in the first finding—that by the reservation in said deed from the defendant to Mary E. Brayton, and by said deed of the College of California to the State of California, represented by the Regents of the University of California, conveying to the latter the rights conveyed to the former by said Z. B. Heywood, as aforesaid, the defendant and the State of California acquired and retained such interests in said two thousand nine hundred acres of land as made them necessary parties to said suit for partition; and that, not having been made such parties, the judgment in said suit setting off said "Plot O" in severalty to plaintiff was and is void as against the defendant.

In taking this view of the case we think that the Court below erred. It is not necessary to discuss the question whether, if respondent had been the sole owner of the land at the time of its deed to Mrs. Brayton, the reservation would have left in respondent a mere personal privilege or right in gross, or an interest in the land itself capable of partition. At the time of the execution of said deed respondent was the owner only an undivided interest in the land as tenant in common with the appellant and others; and, as such tenant in common, it had no power to convey to a stranger, or to reserve to itself after parting with the fee, the right to divert water entirely away from said land. A tenant in common cannot create an easement or servitude upon the common land

In Goddard on the Law of Easements, on pages 93 and 94, the result of the authorities on the subject is correctly stated as follows: "So the grantor must be the sole owner of the fee. One joint owner or tenant in common cannot create an easement in the common estate as against his co-tenant, though probably he would be himself estopped to dispute a grant thus made. For the same reason one tenant in common cannot, when conveying his own interest in the common property, create by reservation a personal and separate easement over the same for the benefit of his adjoining separate property."

In Boston F. Co. vs. Condit, 19 N. J. Eq. Rp. 394, it was held that "a grantee of the right to dig ores from one tenant in common cannot call for a partition of the premises." See also Kent's Com., Vol. 3, p. 554, 11th ed.; Freeman on Co-tenancy, Sec. 198; Adams vs. Briggs Iron Co., 7 Cushing, 361; Marshall vs. Trumbull, 28 Conn. 183.

We do not understand counsel for respondent as denying this to be the rule clearly established by the general authorities, and they cite no cases to the contrary. But they argue that, logically, the rule ought to be different in this State on account of certain decisions made by this Court (about another matter) in Stark vs. Barrett, 15 Cal. 361; Gates vs. Salmon, 35 Cal. 576, and some other cases which follow them. It was quite customary at one time for individual tenants in common of large Mexican grants to convey, or to undertake to convey, their interests in particular parts of the common land by metes and bounds, called "special locations;" and the decisions last above referred to simply held, first, that the grants of such special locations were good as against naked trespassers; and, second, that they were not absolutely void as against the co-tenants of the grantor, but were taken subject to the co-tenants' right of partition of the whole tract, and might be lost to the grantee when such partition took place. These decisions are admitted to have been in conflict with many authorities of high standing, and were based, no doubt, to some extent, on equitable considerations growing out of particular circumstances; and they should not be pushed further than the limits of their express terms. But there were no questions about easements in those cases. Whatever interest the grantor undertook to convey, was all his interest or estate in the whole land described in the conveyance. There was no attempt to create or reserve a right to dig for minerals in the land, or to cut wood on it, or to take water from it, or to have a way over it—no attempt to divide up the very body of the land and distribute it around. There is nothing, therefore, in those decisions that alters the well established rule as above stated, which determines the main point in the case at bar.

Of course, the deed from Heywood to the College of California, and the deed from the latter to the respondent, or the State of California, are upon the same footing with the "reservation" in the deed from respondent to Brayton. Neither the respondent nor the State of California had an estate or interest in the land, and neither was a necessary party to the suit for partition.

The defenses founded on appropriation, acquiescence, estoppel, and the statutes of limitations, were not maintained. The findings on those issues, as we understand it, were all in favor of appellant; and respondent has not appealed.

Our conclusion is that, upon the findings, judgment should have been rendered for appellant according to the prayer of her complaint, except

as to damages—about which there is no finding. But as appellant now waives all claims for damages, there appears to be no necessity for a new trial. The judgment is therefore reversed, and the Superior Court is directed to enter judgment for plaintiff according to the prayer of the complaint, without damages.

McFARLAND, J.

We concur:

Ten copies "Æschines"—J. R. McDonald & Co.....	10.70
Five copies "Aristophanes"—J. R. McDonald & Co.....	18.30
Freight to Hamburg—J. R. McDonald & Co.....	4.50
Receiving, cartage, shipping—J. R. McDonald & Co.....	
Freight to San Francisco—J. R. McDonald & Co.....	
Consul's certificate—J. R. McDonald & Co.....	
Commission—J. R. McDonald & Co.....	
Case and packing—J. R. McDonald & Co.....	

Marks 384.35

Twelve pounds cotton sash cord—Dunham, Carrigan & Hayden Co.....	4
Half dozen mortise knob locks—Dunham, Carrigan & Hayden Co.....	8
Half dozen L. P. butts—Dunham, Carrigan & Hayden Co.....	2
One dozen transom catchers—Dunham, Carrigan & Hayden Co.....	3
Ten pounds wire brads, 1x17—Dunham, Carrigan & Hayden Co.....	3
Twenty pounds wire brads, 2x12—Dunham, Carrigan & Hayden Co.....	3
Twenty pounds wire brads, 2½x10—Dunham, Carrigan & Hayden Co.....	3
Five gross screws, 1½x14—Dunham, Carrigan & Hayden Co.....	16
Five gross screws, ¾x4—Dunham, Carrigan & Hayden Co.....	32
Two gross screws, ¾x9—Dunham, Carrigan & Hayden Co.....	35
Five hundred feet 1x12x16 surfaced redwood—Henry W. Taylor.....	
One thousand feet 1x6x16 T. and G. redwood—Henry W. Taylor.....	
One thousand and five feet 1½x4x12 redwood—Henry W. Taylor.....	

DISBURSEMENTS—Continued.

Five hundred and thirteen feet 4x4x20 redwood—Henry W. Taylor.....	\$9 28
Five hundred feet ½x12 surfaced redwood—Henry W. Taylor.....	16 50
One thousand feet 1x4x16 T. and G. redwood—Henry W. Taylor.....	32 00
One thousand feet 1x6 rough redwood—Henry W. Taylor.....	18 00
One thousand and three feet 2x4x16 selected pine—Henry W. Taylor.....	23 07
One thousand feet 1½x4x16 T. and G. pine—Henry W. Taylor.....	34 00
One hundred feet 1x4 rough pine—Henry W. Taylor.....	1 80
Mill work on redwood—Henry W. Taylor.....	2 50
Cartage to mill—Henry W. Taylor.....	50
Labor for month of July.....	32 00
Five sets door jambs, 21 feet—Niehaus Bros. & Co.....	
Three sets door jambs, 22 feet—Niehaus Bros. & Co.....	
Two hundred and sixty-five feet ½x12 base—Niehaus Bros. & Co.....	
Eight transom bars—Niehaus Bros. & Co.....	
Two hundred and fifty-six feet round casing—Niehaus Bros. & Co.....	
Five hundred and twelve feet band molding—Niehaus Bros. & Co.....	
Two hundred and fifty-six feet Rd. band—Niehaus Bros. & Co.....	
Two hundred and fifty-six feet bead—Niehaus Bros. & Co.....	
Five hundred and six feet band—Niehaus Bros. & Co.....	111 25
Two hundred and fifty feet casing—Niehaus Bros. & Co.....	
Two hundred and fifty-six feet band back—Niehaus Bros. & Co.....	
Four doors—Niehaus Bros. & Co.....	
Two hundred and fifty feet grounds—Niehaus Bros. & Co.....	
Sixteen feet astragal—Niehaus Bros. & Co.....	
Twenty-four feet threshold—Niehaus Bros. & Co.....	
Twenty-five feet bead mold—Niehaus Bros. & Co.....	
Three Tr. 2x3, 21 oz.—Niehaus Bros. & Co.....	
One thousand feet spruce—Niehaus Bros. & Co.....	38 25
Four hundred feet sugar pine—Niehaus Bros. & Co.....	
Five gallons carriage varnish—Heuter Bros. & Co.....	17 50
Five gallons turpentine—Heuter Bros. & Co.....	2 75
One gallon gasoline—Heuter Bros. & Co.....	35
Five pounds lump pumice—Heuter Bros. & Co.....	50
Five pounds beeswax—Heuter Bros. & Co.....	1 75
Six sash tools—Heuter Bros. & Co.....	1 00
Six fitches—Heuter Bros. & Co.....	75
One flat duster—Heuter Bros. & Co.....	76
One paint burner—Heuter Bros. & Co.....	5 25

One platinum dish, 18 grms.—Justinian Caire	7 75
Wine corks—Justinian Caire	5 00
Four 50-c.c. burettes—Justinian Caire	7 00
Two thermometers—Justinian Caire	5 00
One thermometer—Justinian Caire	1 00
Fifty pounds paraffine—Justinian Caire	9 00
Six Bunsen burners—Justinian Caire	7 50
Fifteen feet pure tin pipe—Justinian Caire	2 40
Two dozen glass funnels—Justinian Caire	2 40
Two dozen 2½-inch watch glasses—Justinian Caire	2 25
One dozen 4-inch watch glasses—Justinian Caire	2 50
One set graduated pipettes—Justinian Caire	4 00
Twenty-five feet rubber tube—Justinian Caire	7 50
Two dozen Kjeldahl flasks—Justinian Caire	10 00
One draw plate—Justinian Caire	3 00
Filter paper, 590—Justinian Caire	7 00
Filter paper, common—Justinian Caire	3 00
Three combustion boats (porcelain)—Justinian Caire	1 00
Three combustion boats (platinum)—Justinian Caire	5 00
Two 4-liter flasks—Justinian Caire	2 25
Two 5-liter flasks—Justinian Caire	2 50
Two 6-liter flasks—Justinian Caire	3 00
Two dozen soil tubes—Justinian Caire	8 00
Five filter pumps—Justinian Caire	8 75
Glass tubes, assorted—Justinian Caire	5 75
One dozen charcoal sticks—Justinian Caire	50
Ten feet platinum wire—Justinian Caire	5 00
One pneumatic trough—Justinian Caire	2 75
One glass aspirator—Justinian Caire	1 50
One dozen beakers—Justinian Caire	3 00
Two dozen 8-ounce reagents—Justinian Caire	9 00
Two dozen 16-ounce reagents—Justinian Caire	
Rubber corks, assorted—Justinian Caire	5 00
Wine corks—Justinian Caire	5 00
One dozen extract flasks—Justinian Caire	2 00
Two thermometers—Justinian Caire	2 00
One half dozen round bottom flasks—Justinian Caire	1 70
Two pounds granulated zinc—Justinian Caire	3 60
Two hundred pounds sal soda—Justinian Caire	3 00
One piece asbestos cloth—Justinian Caire	1 25
One pound baric nitrate—Justinian Caire	50
One match safe—Justinian Caire	25
One pair shears—Justinian Caire	1 00
One foot rubber hose—Justinian Caire	13
Hoop iron—Justinian Caire	2 00
One brass garden syringe—Justinian Caire	5 00
One glass cutter, diamond—Justinian Caire	4 00
One box glass, 9x14—Justinian Caire	2 25
One box glass, 10x16—Justinian Caire	2 50
Twenty-five pounds white lead—Justinian Caire	1 50
Three thermometers—Justinian Caire	1 00
One draw knife—Justinian Caire	1 00
Sole leather for washers—Justinian Caire	2 00
Two packages wire nails—Justinian Caire	35
Two scythes—Justinian Caire	3 00
Eight wire sieves—Justinian Caire	7 60

APPENDIX No. 3 O—Agricultural Experiment Stations—Chemical Apparatus and Supplies.

Two reams filter paper, common—Justinian Caire.....	\$9 00
One ream filter paper, extra—Justinian Caire.....	20 00
Washed filter paper, assorted—Justinian Caire.....	20 15
Forty-four pounds paraffine—Justinian Caire.....	6 60
One dozen stoppered bottles—Justinian Caire.....	4 00
Three 3-c.c. pipettes—Justinian Caire.....	75
Two 10-c.c. cylinders—Justinian Caire.....	80
Six spring clips—Justinian Caire.....	1 50
Six burette clamps—Justinian Caire.....	4 80
Two dozen evaporating dishes—Justinian Caire.....	6 00
Twenty pounds caustic potash—Justinian Caire.....	2 00
Four pounds carbonate soda—Justinian Caire.....	2 16
Four pounds bicarbonate soda—Justinian Caire.....	5 00
Four pounds sodium sulphate—Justinian Caire.....	2 70
Benzine—Justinian Caire.....	50
Eight feet rubber tube—Justinian Caire.....	2 75
One pair scissors—Justinian Caire.....	75
Tacks and locks—Justinian Caire.....	65
Two saucepans—Justinian Caire.....	1 20
Two tin sieves—Justinian Caire.....	80
One gallon measure—Justinian Caire.....	1 75
Two wire screens for stemmer—Justinian Caire.....	3 25
Six coffee sacks—Justinian Caire.....	1 50
One bung borer—Justinian Caire.....	2 00
Six sink scrubbers—Justinian Caire.....	50
One large shovel—Justinian Caire.....	1 00
Two coal scuttles—Justinian Caire.....	1 50
Two small hatches—Justinian Caire.....	1 50
Two common brooms—Justinian Caire.....	1 50
Two mop brooms—Justinian Caire.....	1 00
One scrub brush—Justinian Caire.....	75
Pearline—Justinian Caire.....	25
Six feather dusters—Justinian Caire.....	3 00
Gum labels—Justinian Caire.....	1 00
Twelve sponges—Justinian Caire.....	1 00
Three and one half pounds pure ether—Justinian Caire.....	3 10
One rasp—Justinian Caire.....	40
Ninety-nine feet rubber hose—Justinian Caire.....	12 87
Six gross soil bottles—Justinian Caire.....	58 50
Four gross 2-ounce bottles—Justinian Caire.....	11 00
Two gross 1-dram vials—Justinian Caire.....	1 87
Four gross, each $\frac{1}{2}$ -dram, $\frac{1}{4}$ -dram, $\frac{1}{8}$ -dram vials—Justinian Caire.....	10 12
One hundred and thirteen pounds aqua ammonia—S. F. Gas Light Co.....	9 05
Copper bath—Emil Gruner.....	3 00
Four drying tubes—Emil Gruner.....	5 00
Two extractors—Emil Gruner.....	2 00

DISBURSEMENTS—Continued.

Two platinum disks—Emil Gruner	\$1 80
Boxing—Emil Gruner	20
Two glass retorts—Justinian Caire	2 15
Six hundred corks—Justinian Caire	2 10
One thousand tags—Justinian Caire	1 50
Twine—Justinian Caire	2 50
Three cask brushes—Justinian Caire	3 00
Three brooms—Justinian Caire	15
One box candles—Justinian Caire	2 00
One pair tongs—Justinian Caire	1 00
Graphite—Justinian Caire	1 00
Seven pounds sulphuric ether—Justinian Caire	5 00
Six mouse traps—Justinian Caire	75
Fifty bungs—Justinian Caire	1 35
Filter paper—Justinian Caire	4 00
Matches—Justinian Caire	1 75
Watch glasses—Justinian Caire	3 75
One pair scissors—Justinian Caire	75
One 5-c.c. pipette—Justinian Caire	40
One 10-c.c. pipette—Justinian Caire	70
One 25-c.c. pipette—Justinian Caire	1 00
Two casseroles—Justinian Caire	2 00
Six straw rings—Justinian Caire	1 00
Fifty grains carbozol—Justinian Caire	2 50

\$273 47

APPENDIX No. 3 P—Agricultural Experiment Stations—Furniture.

Five shades—E. Hook	\$5 00
One hat rack—E. Hook	1 50
One office chair—E. Hook	7 00
One pine table—E. Hook	6 00
Stove for office—Hewitt Bros.	12 25
Stove board—Hewitt Bros.	1 50
Five joints pipe—Hewitt Bros.	2 00
Pipe collar—Hewitt Bros.	15
One damper—Hewitt Bros.	25
Fitting desk with pipe connections—John J. Menges	6 00
Two 6-foot tables—E. Hook	12 00
Three shades—E. Hook	3 00
One office rug—J. M. Levy	2 75
One office drawer—J. M. Levy	1 25
Furnishing and putting in speaking tubes—J. J. Menges	3 95
One Ruby gas stove—Oakland Gas Co.	7 25
One thousand feet surfaced redwood—Henry W. Taylor	35 00
Cartage and mill work—Henry W. Taylor	2 50
One dozen S. P. R. chairs—California Manufacturing Co.	21 00
Fifty-eight square yards cocoa matting—E. Hook	43 50

\$171 86

APPENDIX No. 3 Q—Agricultural Experiment Stations—Fencing and Drainage.

One thousand and twenty-three pounds galvanized wire—George F. Bell	\$57 80
Five hundred shakes—S. P. Milling Co.	7 00
Twenty-one feet surfaced—S. P. Milling Co.	1 05
Labor, cutting shakes—S. P. Milling Co.	1 00
Two hundred and twenty-two feet surfaced—S. P. Milling Co.	8 95
Two hundred and forty feet rustic—S. P. Milling Co.	9 00
One door and window—S. P. Milling Co.	4 75
One lock and butts—S. P. Milling Co.	1 00
Three hundred shakes—S. P. Milling Co.	4 20
Fifty-four rods picket fence—J. C. Manock	62 30
One hundred and fifty feet refuse—Salinas Valley Lumber Co.	3 25
Twenty-five 6½-foot posts—Salinas Valley Lumber Co.	4 00
One coil galvanized wire—Salinas Valley Lumber Co.	5 61

\$169 94

APPENDIX No. 3 R—Agricultural Experiment Stations—Freight and Expressage.

Freight on wagon to Tulare—Southern Pacific Co.	\$5 00
Freight—E. Ginocchio & Bro.	5 80
Expressage—Geo. Hansen	1 15
Expressage from Woodin & Little—Geo. Hansen	1 50

DISBURSEMENTS—Continued.

Express on traps—Julius Forrer	\$0 55
Expressage—Wells, Fargo & Co.	1 15
Expressage on cuttings—Margherita vineyard	7 00
Expressage to Mission San José—Wells, Fargo & Co.	25
Hauling grapes at Cupertino—J. H. McComb	34 00
Freight on six hundred pounds plaster—Southern Pacific Co.	21 25
Freight and expressage—E. Ginocchio & Bro.	2 10
Freight on one thousand five hundred packages drain tile—Southern Pacific Co.	43 80
Expressage to Mountain View—Wells, Fargo & Co.	75
Freight on galvanized leaders—Southern Pacific Co.	1 65
Freight on one bale trees—Southern Pacific Co.	1 85
Freight on one bale trees—Southern Pacific Co.	1 00
Freight on one box trees—Southern Pacific Co.	1 55
Expressage—Wells, Fargo & Co.	2 00
Expressage—W. W. Montague & Co.	50
Expressage—Whitney's Express	50
Freight on two bales trees—Southern Pacific Co.	4 45
Freight—E. Ginocchio & Bro.	2 00
Freight on eight cords stakes—Southern Pacific Co.	80 50
Freight—E. Ginocchio & Bro.	2 75
Freight on eight cords stakes—Southern Pacific Co.	63 00
Eight cords grape stakes; freight on, to Paso Robles—Southern Pacific Co.	44 80

\$333 91

APPENDIX No. 3 S—Agricultural Experiment Stations—Incidental Expenses.

Expenses at County Fair, Ione—George Hansen	\$6 25
Photographs for exhibit—George Hansen	2 75
Saltpeter for horses—George Hansen	25
Horseshoe—George Hansen	75
Trimming horse's feet—Julius Forrer	50
Expenses at County Fair, Sacramento—George Hansen	1 50
Sending grapes to Ione—George Hansen	1 50
Ingredients for wax for trees—George Hansen	1 75
Squirrel poison—George Hansen	50
Postage—George Hansen	1 00
Horseshoeing—Cox & Williams	2 50
Auger handles—Cox & Williams	50
Sharpening picks and crowbar—Cox & Williams	50
Horseshoeing—Cox & Williams	2 00
Lime—George Hansen	2 65
Milk for whitewash—George Hansen	1 00
Expressage on coin—George Hansen	1 70
Postage—George Hansen	75
Insurance at Paso Robles—J. C. Mitchell & Sons	21 60
Sheltering horses during rain—George Hansen	1 00
Postage—George Hansen	50
Stabling horses—George Hansen	50
Twelve sheets board—George Hansen	2 25
Six sheets blotting—George Hansen	75
Expressage and postage—George Hansen	95
One grape stemmer—A. H. Broad	6 50
Two pounds copper wire—A. T. Cotton	1 50
Twenty-four reducers—A. T. Cotton	6 00
Three pounds solder—A. T. Cotton	75
Four hours' work—A. T. Cotton	2 75
Two tons alfalfa hay—J. M. Alexander	13 00
Two cords wood—A. Lustfield	10 00
One brush—E. Ginocchio & Bro.	75
One can lead and oil—E. Ginocchio & Bro.	1 00
One keg lead and oil—E. Ginocchio & Bro.	3 00
One can coal oil—E. Ginocchio & Bro.	1 87
One box powder and caps—E. Ginocchio & Bro.	6 00
Hinges and tacks—E. Ginocchio & Bro.	75
Two screws—E. Ginocchio & Bro.	36
Ten-pound sledge hammer—E. Ginocchio & Bro.	2 50
One hammer handle—E. Ginocchio & Bro.	25
Lantern globe—E. Ginocchio & Bro.	37
Hooks—E. Ginocchio & Bro.	50
Two dozen quarts carbon bisulphide—John H. Wheeler	12 00
Two foot scrapers—Cox & Williams	1 00
Three horseshoes—Cox & Williams	1 50

DISBURSEMENTS—Continued.

Forwarding grain—Geo. Hansen	
Stabling horse—Geo. Hansen	
Office lamp—Geo. Hansen	
Postage—Geo. Hansen	
Staples and pincers—Bennett, Shackelford & LeBlanc	
One doubletree bar—Bennett, Shackelford & LeBlanc	
Fifteen pounds 3d nails—Bennett, Shackelford & LeBlanc	
Eight pounds 10d nails—Bennett, Shackelford & LeBlanc	
Eight pounds 8d nails—Bennett, Shackelford & LeBlanc	
Three pounds 10d nails—Bennett, Shackelford & LeBlanc	
One lock—Bennett, Shackelford & LeBlanc	
Hinges and butts—Bennett, Shackelford & LeBlanc	
Hat hooks—Bennett, Shackelford & LeBlanc	
Pointing plow—W. C. Henderson	
Eight shoes—W. C. Henderson	
Ball wicking—Thos. C. Jameson	
Two feet lead pipe—Thos. C. Jameson	
Labor on sink—Thos. C. Jameson	
Two pieces zinc—John J. Menges	
Freight on one bale cuttings—Julius Forrer	
Pipe and labor on trough—Julius Forrer	
Trimming horse's feet—Julius Forrer	
Expenses on deed—Geo. Hansen	
One stove board—Hewitt Bros.	
Twenty feet 1½-inch pipe—Hewitt Bros.	
Two bushings—Hewitt Bros.	
Cutting and threading pipe—Hewitt Bros.	
Paint and varnish—Hewitt Bros.	
One horse blanket—E. G. Freeman

16	Two dozen hooks and paint—E. Ginocchio & Bro.	1 75
1	Expressage—E. Ginocchio & Bro.	1 75
1	Rivet punch—E. Ginocchio & Bro.	50
1	Lard oil—E. Ginocchio & Bro.	1 00
4	One thousand seven hundred and forty pounds barley—Geo. Rinehart & Bros.	21 75
12	Platture blowpipe—D. Van Nostrand & Co.	4 20
10	Two thousand and seventy 4-foot grape stakes—Santa Cruz Lumber Co.	28 98
6	One thousand six hundred and fifty 6-foot grape stakes—Santa Cruz Lum. Co.	33 00
10	Two thousand and seventy 4-foot grape stakes—Santa Cruz Lumber Co.	28 98
10	One thousand six hundred and fifty 6-foot grape stakes—Santa Cruz Lum. Co.	33 00
6	Two thousand and seventy 4-foot grape stakes—Santa Cruz Lumber Co.	28 98
10	One thousand one hundred and thirty 6-foot grape stakes—Santa Cruz L. Co.	22 60
1	Three sets sieves—Justinian Caire	8 50
1	Books for laboratory—Hunt & Eaton	14 22
1	One hundred and fifty drill sample bags—Neville & Co.	17 50

DISBURSEMENTS—Continued.

Two hundred and fifty feet 16-foot redwood—Henry W. Taylor.....	\$18 00
Two hundred and fifty feet 16-foot redwood—Henry W. Taylor.....	
Five hundred redwood boards—Henry W. Taylor.....	

APPENDIX No. 3 W—Agricultural Experiment Stations—Tools, Implements, and Machinery.

Six feet red strip belt—Woodin & Little	\$1 00
Six lace strings—Woodin & Little	
Six lag screws—Woodin & Little	
Two machine bolts—Woodin & Little	
Repairing cultivator—Cox & Williams	
Two clevises and hooks—Cox & Williams	
Four new shoes—Cox & Williams	
Repairing cultivator—Cox & Williams	
Frames and nut—Cox & Williams	
Two pair chain tongs—Woodin & Little	
Two pair Brown's tongs—Woodin & Little	
Two 1½-inch hose bibbs—Woodin & Little	
Two 1-inch hose bibbs—Woodin & Little	
One 1-inch Plu. hose bibb—Woodin & Little	
Three 1½-inch unions—Woodin & Little	
Three 1-inch unions	
Three 1½-inch tees—Woodin & Little	
Three 1-inch tees—Woodin & Little	
Two 1-inch ells—Woodin & Little	
Packing and cartage—Woodin & Little	
One tightening pulley—Woodin & Little	
Cartage—Woodin & Little	
Horseshoes—Cox & Williams	
Wrench—Cox & Williams	
One neckyoke—Cox & Williams	
Sharpening mattocks and drills—Cox & Williams	
One spray pump and hose—Bean Spray Pump Co.	
One rotary harrow—Byron Jackson	
One spray pump and hose—Robert Menzel	
One duplex stock and die, with cutter—Huntington-Hopkins Co.	
Two Sanders' pipe cutters—Huntington-Hopkins Co.	
One Parker's pipe vise—Huntington-Hopkins Co.	
Six singletrees; six pair leathers—G. G. Wickson & Co.	

APPENDIX No. 3 X—Agricultural Experiment Stations—Scientific Instruments.

Three arrow vanes and packing—Howe Scale Co.	\$36 75
One spectroscope and charges—A. Krüss, Hamburg	133 00
Customs charges on one case—George W. Reed	6 10
One amperometer—Pacific Electric Storage Co.	32 40

APPENDIX No. 3 Y—Agricultural Experiment Stations—Traveling Expenses.

Two trips to Shaws—F. T. Bioletti	\$7 00
Two trips to Shaws—F. T. Bioletti	8 00
Traveling expenses of W. G. Klee:	
Berkeley to Santa Clara	1 00
Horse and buggy	3 00
Hotel bill and supper	1 50
San José to Berkeley	1 50
Berkeley to Irvington and return	1 50
Stage from Mission to Irvington	1 00
Board and lodging at Irvington	3 00
Meals at Niles	7 00
Berkeley to Tulare	2 00
Sleepers and breakfast	6 00
Hotel bill at Tulare	
Telegram to Fresno	
Visalia, one meal	
Porterville expenses	
Porterville to Fresno	
Dinner at Fresno	
Telegram to San Francisco	

DISBURSEMENTS—Continued.

Supper at Fresno	\$0 50
Fresno to Berkeley	6 00
Supper and breakfast	2 00
Expenses on package from San Diego	45
Gopher traps for Tulare	2 25
Oil soap for Paso Robles	1 00
Two trips to San Francisco	50
Expenses of E. W. Hilgard during July	33 63
Expenses of E. W. Hilgard during August	11 60
Expenses of W. G. Klee during September	11 10
Expenses of W. G. Klee during October	32 45
To Mountain View and return—M. E. Jaffa	2 00
Buggy hire—M. E. Jaffa	2 00
Expenses of L. E. Benton at Cupertino and Mission San José during vintage	54 85
Stockton and return—E. J. Wickson	5 00
Los Guillocos and return—F. T. Bioletti	4 60
Fresno and return—E. J. Wickson	11 80
Buggy hire—E. J. Wickson	3 00
Expenses to city and return—November and December—L. W. Maslin	2 60
Expenses of W. G. Klee during December	28 75
Expenses of F. T. Bioletti	1 25
Los Guillocos and return—F. T. Bioletti	3 50
Los Guillocos and return—Louis Paparelli	3 50
Obtaining cuttings—L. E. Benton	15 60
Expenses of W. G. Klee during March	47 80

\$336 08

APPENDIX No. 3 Z—Agricultural Experiment Stations—Water Supply.

One pulley, 26-inch diameter—Woodin & Little	\$10 50
Four feet iron—Cox & Williams	1 40
Wildrod—Cox & Williams	50
Seventy-five pounds iron—Cox & Williams	9 00
Pipe and bolts—Cox & Williams	5 50
Nuts and washers—Cox & Williams	3 80
Fixing rod—Cox & Williams	1 00
Two plates—Cox & Williams	1 00
One spindle—Cox & Williams	50
Four shoes—Cox & Williams	2 00
Two bolts—Cox & Williams	80
Repairing cultivator—Cox & Williams	75
Cutting cranks—Cox & Williams	75
Repairing hooks—Cox & Williams	10
Thirty-five pounds spikes—E. Ginocchio & Bro.	1 45
Six lag screws—E. Ginocchio & Bro.	75
Butts and washers—E. Ginocchio & Bro.	1 15
Freight—E. Ginocchio & Bro.	50
Pipe and punch—Hewitt Bros.	2 15
Bolt and union—Hewitt Bros.	90
Twenty-six and one half feet pipe—Hewitt Bros.	2 12
Nine fittings—Hewitt Bros.	1 13
Cutting pipe—Hewitt Bros.	25
Labor during July on waterworks at Jackson	213 10
Labor during August on waterworks at Jackson	133 35
Castings, bolts, etc., for water gates—Donnelly & Howard	14 00
One thousand three hundred and forty-seven feet lumber—L. Newman & Co.	29 41
One hundred and thirty and one half feet 1½-inch pipe—A. T. Cotton	21 90
One pump—A. T. Cotton	4 00
Two elbows—A. T. Cotton	60
Laying pipe and pump—A. T. Cotton	8 50
Six barrels Portland cement—Moore & Smith Lumber Co.	25 50

\$498 36

APPENDIX No. 4—College of Agriculture.

Labor for the month of July	\$406 50
Labor for the month of August	450 95
Expressage for the month of June—Patterson & Co.	10 00
Expressage for July and August—Wells, Fargo & Co.	11 25
Expressage for September—Wells, Fargo & Co.	55 40
Labor for month of September	303 95
Thirty-two loads manure—Joseph McKeown	16 00
Freight on twenty-one boxes grapes—Southern Pacific Co.	85

DISBURSEMENTS—Continued.

Baling fifty-three bales hay—John Myers	\$13 40
Expressage for September and October—Wells, Fargo & Co.	104 10
Three thousand two hundred cubic feet gas—Oakland Gas Co.	8 80
Four thousand seven hundred cubic feet gas—Oakland Gas Co.	12 50
Clerical services of J. D. Layman	2 50
Expressage for July, August, and September—Patterson & Co.	28 70
Six thousand nine hundred cubic feet gas—Oakland Gas Co.	19 00
Repairing shears—Nelson & McLellan	1 00
Repairing garden shears—Nelson & McLellan	1 00
Hook for scales—Nelson & McLellan	4 00
Eight new shoes—Nelson & McLellan	1 00
Sharpening one chisel—Nelson & McLellan	1 00
Labor for month of October	417 80
One reach—Nelson & McLellan	1 00
Two new handles to saw—Nelson & McLellan	1 20
Sharpening four picks—Nelson & McLellan	1 20
Eight new shoes—Nelson & McLellan	4 00
Sharpening two picks—Nelson & McLellan	30 00
Sharpening two picks—Nelson & McLellan	30 00
Sharpening one pick—Nelson & McLellan	1 00
Sharpening two picks—Nelson & McLellan	1 20
Repairing wagon yoke—Nelson & McLellan	4 50
Expressage October and November—Wells, Fargo & Co.	11 80
Expressage October—Patterson & Co.	4 50
Four thousand eight hundred cubic feet gas—Oakland Gas Co.	13 20
Two thousand one hundred feet gas—Oakland Gas Co.	5 80
Labor for month of November	426 50
Six thousand cubic feet gas—Oakland Gas Co.	15 00
Eleven thousand three hundred cubic feet gas—Oakland Gas Co.	22 50
Expressage during December—Wells, Fargo & Co.	4 20
Labor for the month of December	441 80
Seed bags—Ames & Detrick	8 00
Twenty-five pounds carrot seed—Reddington & Co.	3 70
Sharpening two shares—Nelson & McLellan	50 00
Eight new shoes—Nelson & McLellan	4 00
Sharpening one share—Nelson & McLellan	20 00
Sharpening two shares—Nelson & McLellan	20 00
Hooks for singletree—Nelson & McLellan	1 50
Repairing forks—Nelson & McLellan	2 20
Expressage during November—Patterson & Co.	7 70
Expressage during November—Wells, Fargo & Co.	394 50
Labor for month of January	10 10
Expressage during January—Wells, Fargo & Co.	1 50
Expressage during December—Patterson & Co.	11 00
Half ton barley—Stewart & Trowbridge	8 00
Half ton bran—Stewart & Trowbridge	4 00
Expressage during January—Patterson & Co.	38 50
Fifteen thousand four hundred cubic feet gas—Oakland Gas Co.	40 70
Sixteen thousand three hundred cubic feet gas—Oakland Gas Co.	37 50
Expressage during February—Wells, Fargo & Co.	732 40
Labor for month of February	3 50
Expressage during February—Patterson & Co.	32 50
Thirteen thousand cubic feet gas—Oakland Gas Co.	4 00
Eight new shoes—Nelson & McLellan	50 00
Repairing sprinkler—Nelson & McLellan	70 00
One plow clevis—Nelson & McLellan	1 00
Chain, and sharpening shares—Nelson & McLellan	1 50
Sharpening fifty-six harrow teeth—Nelson & McLellan	25 00
Repairing hinges and new bolts—Nelson & McLellan	2 00
Sharpening two shares—Nelson & McLellan	6 80
Postage stamps—N. B. Byrne	27 30
Expressage during March—Patterson & Co.	13 00
Telegrams—Western Union Telegraph Co.	25 00
Expressage during March—Wells, Fargo & Co.	514 00
Labor for month of March	12 00
Ten sacks oats—Paul Keyser	2 00
Expressage during April—Wells, Fargo & Co.	2 00
Labor for month of April	1 00
One ton coal—Stewart & Trowbridge	1 00
Repairing cart chain—Nelson & McLellan	1 00
Sharpening two shares—Nelson & McLellan	4 00
Eight new shoes—Nelson & McLellan	1 00
Sharpening two shares—Nelson & McLellan	1 00

DISBURSEMENTS—Continued.

Two bolts for cultivator—Nelson & McLellan	\$0 25
Four teeth for cultivator—Nelson & McLellan	2 50
Telegrams during March—Western Union Telegraph Co.	2 38
Expressage ten sacks oats—Patterson & Co.	2 00
Expressage five boxes trees—Patterson & Co.	1 75
Freight on five boxes trees—Southern Pacific Co.	12 15
Expressage one box maps—Patterson & Co.	50 00
Expressage one pair scales—Patterson & Co.	75 00
Expressage twelve chairs—Patterson & Co.	2 00
Expressage one box soda—Patterson & Co.	75 00
Expressage one box instruments—Patterson & Co.	1 00
Thirty-five square feet felting—Justinian Caire	4 00
One pneumatic trough—Justinian Caire	8 00
Twenty-two pounds sulphuric acid—Justinian Caire	7 20
Five pounds caustic potash—Justinian Caire	4 05
Two pounds sodium oxide—Justinian Caire	1 50
Ten pounds oxalic acid—Justinian Caire	2 20
One ounce chloride platinum—Justinian Caire	6 60
One quart bisulphide carbon—Justinian Caire	60 00
Glass wool—Justinian Caire	1 00
One platinum crucible and cover—Justinian Caire	18 87
One hydrogen generator—Justinian Caire	9 00
Two aspirating bottles—Justinian Caire	2 15
Two stands—Justinian Caire	2 50
Zinc—Justinian Caire	60 00
Assorted rubber tubing—Justinian Caire	5 00
Four burner flanges—Justinian Caire	1 25
Three pounds petroleum ether—Justinian Caire	2 25
Three pounds chloroform—Justinian Caire	2 25
Five bulb tubes—Justinian Caire	3 00
Five pounds rock sugar—Justinian Caire	85 00
Two potash tubes—Justinian Caire	1 50
Two nests crucibles—Justinian Caire	75 00
Assorted corks—Justinian Caire	5 00
Bungs for kegs—Justinian Caire	2 25
One dozen 1-gallon demijohns—Justinian Caire	3 60
One dozen 2-gallon demijohns—Justinian Caire	5 40
One half dozen 3-gallon demijohns—Justinian Caire	3 60
Two hose couplings—Justinian Caire	50 00
Nails—Justinian Caire	1 00
Expressage during May—Wells, Fargo & Co.	14 00
Thirty-six county maps of California—E. M. Sleator	235 50
One map, California—E. M. Sleator	7 00
One map, Central California—E. M. Sleator	4 50
One map, Southern California—E. M. Sleator	4 00
Labor for month of May	454 00
One ton barley—Stewart & Trowbridge	28 00
Five hundred pounds bran—Stewart & Trowbridge	4 25
Blacksmithing during May—Nelson & McLellan	5 75
Expressage during May—Patterson & Co.	5 20
Plowing on mountain—John Stutt	35 00
Seven thousand seven hundred cubic feet gas—Oakland Gas Co.	19 25
Two thousand one hundred cubic feet gas—Oakland Gas Co.	4 75
Seven thousand one hundred cubic feet gas—Oakland Gas Co.	17 75
Three thousand one hundred cubic feet gas—Oakland Gas Co.	7 00
Two carboys—San Francisco Gaslight Co.	5 00
Expressage—Wells, Fargo & Co.	2 45
Moving and repairing building—A. H. Broad	225 00
Glass and porcelain ware—bill of Franz Schilling, Gehlberg, Germany	93 31

\$6,954 22

APPENDIX No. 5—College of Chemistry.

Expressage on one carboy ammonia—Patterson & Co.	\$0 75
Expressage on one case glass—Patterson & Co.	50 00
Expressage on one flask quicksilver—Patterson & Co.	50 00
Expressage on three carboys ammonia—Patterson & Co.	2 25
Expressage on two cases—Patterson & Co.	75 00
Expressage on one case, one pot—Patterson & Co.	1 00
Freight on five cases glass from Hamburg—Wm. Wolff & Co.	61 23
Freight on one case porcelain from Hamburg—Wm. Wolff & Co.	
Freight on eleven cases glass from Hamburg—Wm. Wolff & Co.	
Insurance—Canton Insurance Co.	5 64

DISBURSEMENTS—Continued.

Eight hundred cubic feet gas—Oakland Gas Co.	\$2 20
Six hundred cubic feet gas—Oakland Gas Co.	1 66
Custom fees on seventeen cases—Geo. W. Reed	4 00
Twenty pounds caustic soda—T. W. Jackson & Co.	2 00
Fifty pounds plumbago—Pacific Graphite Manufacturing Co.	2 50
Expressage on seventeen cases apparatus—Patterson & Co.	15 00
Expressage on one package—Patterson & Co.	25
Four thousand six hundred cubic feet gas—Oakland Gas Co.	12 66
Insurance—Canton Insurance Co.	23 40
Custom fees on one case—Geo. W. Reed	4 20
Thirty pounds caustic soda—T. W. Jackson & Co.	3 00
Freight on one case china from Hamburg—Wm. Wolff & Co.	4 84
Expressage on two boxes glass—Patterson & Co.	50
Expressage on one box graphite—Patterson & Co.	35
Expressage on two cases soda—Patterson & Co.	25
Expressage on one carboy acid—Patterson & Co.	1 00
Expressage on two boxes—Patterson & Co.	75
Eight thousand seven hundred cubic feet gas—Oakland Gas Co.	23 85
Seven hundred cubic feet gas—Oakland Gas Co.	1 95
One hundred gms. carbozal—Justinian Caire	5 50
Twenty-one and one half feet wire cloth—Justinian Caire	9 03
Three pair tongs—Justinian Caire	3 75
Four pounds cyanide potash—Justinian Caire	2 00
Ten pounds com. cyanide potash—Justinian Caire	3 30
Eight thousand five hundred cubic feet gas—Oakland Gas Co.	21 25
Twelve thousand one hundred cubic feet gas—Oakland Gas Co.	24 25
One carboy sulphuric acid—Golden City Chemical Works	32 30
Two carboys muriatic acid—San Francisco Chemical Works	8 25
Expressage on one box—Patterson & Co.	25
Expressage on two carboys—Patterson & Co.	1 50
Two 3-gallon retorts—Justinian Caire	6 00
One 4-gallon retort—Justinian Caire	4 00
Twenty pounds sub. sulphur—Justinian Caire	1 00
Five pounds lamp black—Justinian Caire	1 25
Five pounds soda acetate—Justinian Caire	3 00
Twenty pounds borax—Justinian Caire	2 00
Twenty pounds copper—Justinian Caire	4 80
Expressage, one box glass—Patterson & Co.	25
Expressage, two carboys acid—Patterson & Co.	1 50
Expressage, one package—Patterson & Co.	25
Stationery—Payot, Upham & Co.	3 00
Expressage, sheet iron, one case—Patterson & Co.	1 00
Expressage, one box, one can—Patterson & Co.	50
Four thousand one hundred cubic feet gas—Oakland Gas Co.	10 25
Four thousand cubic feet gas—Oakland Gas Co.	10 00
Five gallons China nut oil—Justinian Caire	5 00
Sheet iron—Justinian Caire	1 10
Six pinch cocks—Justinian Caire	1 50
One chisel—Justinian Caire	75
One saw—Justinian Caire	1 00
Sheet copper—Justinian Caire	1 65
Fifteen pounds oxalic—Justinian Caire	3 00
Five gallons linseed oil—Justinian Caire	3 75
Five gallons shellac—Justinian Caire	2 00
Four assorted brushes—Justinian Caire	1 50
Five gallons turpentine—Justinian Caire	3 50
Candles—Justinian Caire	3 00
Two charcoal saws—Justinian Caire	1 00
Two burette stands—Justinian Caire	3 00
One gallon asphaltum varnish—Justinian Caire	35
Expressage on one box oil—Patterson & Co.	25
Freight on thirty-four cases and one cask apparatus from Hamburg—Wm. Wolff & Co.	72 50
Eight thousand one hundred cubic feet gas—Oakland Gas Co.	20 25
Expressage on six cases apparatus—Patterson & Co.	3 00
Expressage on twenty-five cases apparatus—Patterson & Co.	14 00
Expressage on five cases apparatus—Patterson & Co.	3 50
Expressage on two boxes hardware—Patterson & Co.	50
Expressage on one wood grating—Patterson & Co.	60
Traveling expenses—W. B. Rising	3 00
Five quires gummed paper—Students Coöperative Association	4 00
Custom fees on thirty-five cases chemicals—Geo. W. Reed	4 00

APPENDIX No. 7 A—College of Mechanics.

Expressage on one box—Patterson & Co.	
Expressage on three packages—Patterson & Co.	
Four thousand two hundred cubic feet of gas—Oakland Gas Co.	
Expressage on one package—Patterson & Co.	
Four thousand three hundred cubic feet of gas—Oakland Gas Co.	
Two dozen chilled iron saws—Justinian Caire	
One large knife for extension bit—Justinian Caire	
One small knife for extension bit—Justinian Caire	
One screw wrench, 8-inch block—Justinian Caire	
One screw wrench, 10-inch block—Justinian Caire	
One screw wrench, 12-inch block—Justinian Caire	
One machinist's hammer—Justinian Caire	
One riveting hammer, 44—Justinian Caire	
One riveting hammer, 43—Justinian Caire	
One 8-inch smooth plane—Justinian Caire	
One dozen Murphy gravers—Justinian Caire	
Three packages Escuto pins—Justinian Caire	
Three pounds copper rivets and burrs—Justinian Caire	
One 7-inch side cutting stubb pliers—Justinian Caire	
One 2-inch soldering iron—Justinian Caire	
Sixteen pounds solder—Justinian Caire	
Screw eyes and hooks—Justinian Caire	
One set tightening screw plates—Justinian Caire	
Two match boxes—Justinian Caire	
One hundred 2-cent stamps—N. B. Byrne	
Ten 5-cent stamps—N. B. Byrne	
Two hundred and twenty 1-cent stamps—N. B. Byrne	
One hundred 1-cent wrappers—N. B. Byrne	
One hundred 2-cent envelopes—N. B. Byrne	
Three thousand seven hundred cubic feet gas—Oakland Gas Co.	
Six thousand four hundred cubic feet gas—Oakland Gas Co.	
Two 1-inch hook hangers—Clot & Meese	
Two 1-inch collars—Clot & Meese	
One thousand cards cut to order—J. J. Evans	
Seven paper pads—J. J. Evans	
Three dozen pencils—J. J. Evans	
Forty-seven and one half pounds brass castings—F. Baud	
Emery cloth and paper—Dunham, Carrigan & Hayden Co.	
Three fourths doz. flat smooth files—Dunham, Carrigan & Hayden Co.	\$4 83
Four dozen bast. and cut files—Dunham, Carrigan & Hayden Co.	15 93
One half dozen smooth files—Dunham, Carrigan & Hayden Co.	1 86
One half dozen bast. files—Dunham, Carrigan & Hayden Co.	1 60
Two dozen taper saw files—Dunham, Carrigan & Hayden Co.	4 10
One dozen slim tapers—Dunham, Carrigan & Hayden Co.	1 90
One fourth dozen slim tapers—Dunham, Carrigan & Hayden Co.	33
One dozen rd., second cut—Dunham, Carrigan & Hayden Co.	3 03

Forty-four pounds rubber packing—Gutta Percha and Rubber Manufactur-	
ing Co.	10 12
Five gallons Valvolite cylinder oil—American Oil Co.	5 50
Five gallons Champion cylinder oil—American Oil Co.	3 75
Five gallons Spindle oil—American Oil Co.	1 50
Five gallons Cardinal engine oil—American Oil Co.	3 25
Manual machine construction—Industrial Publishing Co.	5 00
Sixty-six machine drawings—Industrial Publishing Co.	10 00
Repairing valves of gas engine—Williams & Orton	15 00
Seven pieces castings—Judson Manufacturing Co.	5 80
Three gas engine rings—H. P. Gregory & Co.	4 50
Sixty feet 1-inch walnut—White Brothers	9 00
Six bundles catgut—Justinian Caire	3 00
Four gross screws—Justinian Caire	80
Twelve pulleys—Justinian Caire	1 50
One bottle varnish—Justinian Caire	75

\$222 09

APPENDIX No. 8 A—College of Mines.

Expressage on one box glass—Patterson & Co.	\$0 25
Expressage on three cases machinery—Patterson & Co.	2 00
Five tons English coke—T. H. Henderson, Agt.	100 00
One thousand one hundred cubic feet gas—Oakland Gas Co.	3 05
Two hundred cubic feet gas—Oakland Gas Co.	55
One hundred and five gallons coal oil—Osborn & Alexander	12 60
Expressage on one package castings—Patterson & Co.	25
Expressage on one case machinery—Patterson & Co.	1 00
Freight on one case machinery—Atlantic and Pacific Railroad	12 09
One thousand one hundred cubic feet gas—Oakland Gas Co.	3 05
Rubber tubing—Justinian Caire	4 50
Riders—Justinian Caire	1 00
One pulley—Clot & Meese	4 50
Expressage on one tank oil—Patterson & Co.	3 50
Three thousand nine hundred cubic feet gas—Oakland Gas Co.	10 75
One thousand three hundred cubic feet gas—Oakland Gas Co.	3 60
Three thousand one hundred cubic feet gas—Oakland Gas Co.	7 75
Four thousand four hundred cubic feet gas—Oakland Gas Co.	8 75
Twelve feet 1-inch pipe—John J. Menges	70
Twenty-six pieces plain glass—John J. Menges	1 00
One nipple to order—Dalziel & Moller	20
One copying ribbon for typewriter—Jones & Givens	1 50
One shield—Jones & Givens	10
Three impression strips—Jones & Givens	25
Repairs to dynamo—Keith Electric Co.	1 50
One gaspipe die—C. F. Marwedel	1 50
One foot brass tube—C. F. Marwedel	40
Welding end of tube—Hinckley, Spiers & Hayes	75
One dynamo to San Francisco and return—Patterson & Co.	1 00
Three thousand four hundred cubic feet gas—Oakland Gas Co.	8 50
Seven thousand five hundred cubic feet gas—Oakland Gas Co.	18 75

DISBURSEMENTS—Continued.

Eight thousand six hundred cubic feet gas—Oakland Gas Co.	\$21 50
Two water gauge glasses—Osborn & Alexander	50
Five assorted files—Savage Bros.	50
Expressage on castings, etc.—Patterson & Co.	3 00
Expressage on coal—Wells, Fargo & Co.	30
Fifty pounds dairy salt—Joseph McClain	70
Two furnace cover clamps—W. McIntosh	2 00
Expressage—Patterson & Co.	5 35
One thousand nine hundred cubic feet gas—Oakland Gas Co.	4 75
Two thousand four hundred cubic feet gas—Oakland Gas Co.	6 00
Three papers screws—Savage Bros.	1 05
Fifty-two feet redwood—Henry W. Taylor	2 05
One half gross screws—Savage Bros.	50
One half dozen pencils—Savage Bros.	25
One half dozen bolts—Savage Bros.	35

APPENDIX No. 8 B—College of Mines—State Appropriation.

One tool grinder complete—Stearns Manufacturing Co.	\$50 00
Four 9-inch by 1-inch emery wheels—Stearns Manufacturing Co.	20 00
Six sets electrode connections—J. Henderson	16 20
One thousand feet redwood—Henry W. Taylor	32 00
Two hundred feet pine—Henry W. Taylor	8 00
Mill work	2 00
One smoke hood—Geo. H. Tay & Co.	8 50
One sheet-iron frame—Geo. H. Tay & Co.	28 00
Altering desk and refitting connections—A. H. Broad	25 00
Six registers and thimbles—W. W. Montague & Co.	2 50
Castings and iron work for crucible frame—Hinckley, Spiers & Hayes	115 00
Gas burner—Justinian Caire	5 00
Crucible covers—Justinian Caire	3 00
One 4-way hopper—Geo. H. Tay & Co.	40 00
Three gallons rubber paint—Whittier, Fuller & Co.	5 00
One gallon of turpentine—Whittier, Fuller & Co.	
One gallon boiled oil—Whittier, Fuller & Co.	
Bolts and rods—Hinckley, Spiers & Hayes	8 00
Mason work on furnace—H. L. Whitney	49 10

APPENDIX No. 9—Department of Lick Observatory.

Rental for one year of telephone—Sunset Telephone Company	\$35 00
One Remington typewriter—G. G. Wickson & Co.	\$100 00
Less exchange old typewriter—G. G. Wickson & Co.	40 00
Ten cases Starlight oil—Goldberg, Bowen & Co.	60 00
Freight on same—Goldberg, Bowen & Co.	26 00
One 7-foot saw—Farmers Union	1 00
Thirteen-pound steel sledge—Farmers Union	7 00
Eight-pound steel wedges—Farmers Union	1 30
One sledge handle—Farmers Union	95
One hand saw—Farmers Union	1 75
One rip saw—Farmers Union	2 00
Two screwdrivers—Farmers Union	45
Fifteen cans chloride lime—Farmers Union	1 50
One half dozen brooms—Farmers Union	1 75
One half dozen mops—Farmers Union	2 15
Ten dozen castile soap—Farmers Union	1 20
One half dozen lantern globes—Farmers Union	75
One half dozen lamp shades—Farmers Union	2 40
One tack hammer—Farmers Union	50
One carpenter's hammer—Farmers Union	4 00
Three Mann's copy book—Payot, Upham & Co.	4 00
One half dozen ink wells—Payot, Upham & Co.	40
One third dozen quarts violet ink—Payot, Upham & Co.	1 00
One sixth dozen quarts Arabin ink—Payot, Upham & Co.	1 00
One and one half reams legal—Payot, Upham & Co.	2 25
One and one half reams letter—Payot, Upham & Co.	2 25
One and one half reams note—Payot, Upham & Co.	1 10
Fifteen cases Starlight oil—Goldberg, Bowen & Co.	36 00
Freight on same—Goldberg, Bowen & Co.	2 40
Thirty gallons machine oil—Whittier, Fuller & Co.	16 00

DISBURSEMENTS—Continued.

Ten gallons pure sperm oil—Whittier, Fuller & Co.	\$11 00
Cartage on same—Whittier, Fuller & Co.	50
Flax packing—Union Iron Works	15 00
Waste packing—Union Iron Works	7 00
One observing lantern—H. Allen Mathews	1 25
One half dozen bottles watch oil—H. Allen Mathews	1 50
Thirteen tons hay—J. D. D. Bernal	195 00
Three thousand seven hundred and fifty pounds barley—Farmers Union	30 00
Four hundred and eighty-five pounds bran—Farmers Union	4 00
Postage stamps—S. H. Wagener	50 00
Ten coils barbed wire—H. Allen Mathews	10 00
Thirteen sheets galvanized iron—H. Allen Mathews	15 00
Twenty dozen 8x10 seed plates—H. Allen Mathews	48 00
One dozen 10x12 seed plates—H. Allen Mathews	3 80
One dozen 11x14 seed plates—H. Allen Mathews	5 00
Ten dozen 4x5 seed plates—H. Allen Mathews	6 50
Ten dozen 3½x4½ Eastman plates—H. Allen Mathews	6 50
One ounce nitric ammonia—H. Allen Mathews	20
One ounce gum sandarac—H. Allen Mathews	50
One pound chloroform—H. Allen Mathews	65
One pound mittiate uranium—H. Allen Mathews	85
Five ounces oil lavender—H. Allen Mathews	1 25
Nine bottles chloride gold—H. Allen Mathews	5 00
One quart alcohol—H. Allen Mathews	75
One ounce chloride ammonia—H. Allen Mathews	20
One ounce sodium—H. Allen Mathews	60
Gratings on silvered glass—E. S. Holden	15 00
One span sorrel mules—Ira Hageman	300 00
Twine and tacks—Farmers Union	95
One dozen papers tacks—H. Allen Mathews	40
Five gallons alcohol—J. Archambeault	14-25
One barrel lime—J. Archambeault	2 00
Two pounds green paint—J. Archambeault	60
Ten pounds chloride of lime—J. Archambeault	1 00
Fifty feet rain conductor—J. Archambeault	5 00
Eleven and a quarter feet belting—J. Archambeault	2 30
Three hose couplings and nipples—J. Archambeault	4 20
One and a half gross matches—J. Archambeault	2 50
Twenty packages toilet paper—J. Archambeault	2 50
Sixty-six feet white cedar—Santa Clara Valley Lumber Company	5 28
One hundred and eighty paper boxes—A. Fleishhacker & Co.	11 25
One hundred sheets blotting paper—B. Westermann & Co.	8 00
Cutting and hauling wood—Hugh Kennedy	9 50
Cutting twenty cords wood—H. C. Brown	40 00
Cutting and hauling wood—H. C. Brown	63 00
Cutting and hauling wood—Hugh Kennedy	24 00
Cutting and hauling wood—H. C. Brown	12 00
Cutting thirteen and one half cords wood—H. C. Brown	27 00
Cutting and hauling wood—H. C. Brown	58 50
Cutting and hauling wood—J. R. Kincaid	207 00
Cutting and hauling wood—H. C. Brown	30 00
Cutting and hauling wood—H. C. Brown	45 00
Four bullseye lanterns—H. A. Mathews	4 75
Labor setting up tanks—R. Fraser	10 00
Three hundred and thirty-three split pickets—Santa Clara Valley Lumber Co.	9 99
Repairing eye end of 12-inch telescope; supplies and labor—Union Iron W'ks	68 65
Ten cords 4-foot wood—E. S. Holden	60 00
Ruling blanks—Hicks-Judd Co.	50
One electro blank—Bancroft Co.	75
Five hundred postal cards—J. W. Flynn	5 00
One signal service—Yale University	3 50
One letter balance—Geo. W. Welch	2 00
One half dozen chimneys—Richard Briggs	1 50
Two retort stands—H. A. Mathews	2 00
One set cork borers—H. A. Mathews	2 75
Two pounds vulcanized rubber—H. A. Mathews	3 50
One printing frame—H. A. Mathews	8 00
One ground glass—H. A. Mathews	2 50
One newspaper file—H. A. Mathews	60
Sixty paper boxes—A. Fleishhacker & Co.	3 80
Two Rochester founts—Thos. Day & Co.	4 25
Bushing three gear wheels—Wight & Branham	8 50
Mounting reversion prism—J. A. Brashear	12 00

DISBURSEMENTS—Continued.

Platinum wire—Justinian Caire	\$1 00
Labor as machinist, etc.—A. J. Burnham	9 50
Two pounds Canada balsam—Justinian Caire	1 50
Making valve stems—Wight & Branham	2 70
Services as carpenter—R. P. Fraser	77 00
Telegrams in May—Western Union Telegraph Co.	1 07
Telegrams in June—Western Union Telegraph Co.	5 50
Telegrams in July—Western Union Telegraph Co.	4 28
Observatory announcement for 1888—Harvard College	13 43
Freight on oil—J. Archambeault	50
Hauling during May—J. R. Kincaid	20 91
Hauling during July—H. C. Brown	14 58
Hauling during July—H. C. Brown	14 46
Freight charges—Chas. B. Hill	1 25
Hauling in August—H. C. Brown	68
Express charges, April and May—Mt. Hamilton Stage Co.	4 70
Express charges, May and June—Mt. Hamilton Stage Co.	9 13
Express charges, June and July—Mt. Hamilton Stage Co.	11 18
Express charges, July and August—Mt. Hamilton Stage Co.	10 45
Express charges—Union Iron Works	25
Placing iron posts at five corners of reservation—Hugh Kennedy	9 00
Fixing place for tanks—Hugh Kennedy	11 00
Repairing water engine—Union Iron Works	54 50
Eight new shoes—T. A. Carroll	4 00
Fixing place for tanks—Hugh Kennedy	21 00
Services as laborer—Hugh Kennedy	14 00
Postage stamps—S. H. Wagener	50 00
Six dozen plates, 8x10—M. A. Seed Dry Plate Co.	12 95
Twelve new shoes—T. A. Carroll	6 30
Nipples, fittings, and ribs—Farmers Union	31 73
Five 2-inch gate valves—Farmers Union	17 50
One pair T. S. shears—Farmers Union	1 50
One pair Boston collars—Fred. M. Stern	7 00
One pair halters and stays—Fred. M. Stern	4 00
Two pair sweat pads—Fred. M. Stern	1 50
One whip—Hatman & Normandin	1 25
Two tin tubes—F. Klein	6 80
One door—Santa Clara Valley Mill and Lumber Co.	2 25
Single and double trees—J. Archambeault	2 75
Freight charges advanced—J. Archambeault	55
Lathe work on cylinders—Wight & Branham	1 00
Four and one sixth dozen blank books—H. A. Mathews	\$12 50
One rubber stamp	2 00
	\$14 50
Less 10 per cent	1 45
Eighty-four and one half pounds flax packing—Union Iron Works	13 06
Repairing micrometer—A. Lietz & Co.	42 25
Two dozen lamp chimneys and freight—C. W. J. Martens	22 80
Expressage prepaid—B. Westermann & Co.	5 50
Expressage during August and September—Mt. Hamilton Stage Co.	5 00
Freight on packing—Southern Pacific Company	15 70
Transporting eclipse reports—Wells, Fargo & Co.	24 20
Expressage during September—Mt. Hamilton Stage Co.	20 00
Three relays N. P.—Paul Seilers Electrical Works	13 50
Three cells Dr. Gassner battery—Paul Seilers Electrical Works	4 50
Ten pounds chromic acid—Paul Seilers Electrical Works	3 50
One dozen ferrotype plates—H. A. Mathews	1 00
Three ounces hydroquinine—H. A. Mathews	2 50
One ounce hydrate sodium—H. A. Mathews	25
One dozen hooks and staples—H. A. Mathews	1 00
One thousand eight hundred McGill fasteners—H. A. Mathews	6 00
One railroad lantern—H. A. Mathews	1 75
One brace and saw—Farmers Union	1 50
Twelve-foot stepladder—Farmers Union	4 00
One gross screws—Farmers Union	1 50
One pair butts—Farmers Union	1 50
Lock and glue—Farmers Union	1 50
One half dozen padlocks—Farmers Union	1 50
One ebony diamond—Farmers Union	7 00
One half bolt twine—Farmers Union	
Sandpaper and brush—Farmers Union	

DISBURSEMENTS—Continued.

Five gallons shellac—Farmers Union	\$22 50
Special work on spectroscope—John A. Brashear	79 00
One short focus objective—John A. Brashear	12 00
One long focus objective—John A. Brashear	12 00
One lens for photo work—John A. Brashear	7 00
One special eyepiece—John A. Brashear	20 00
Expressage—John A. Brashear	3 15
Control for driving clock—Union Iron Works	37 96
Drawing of bronze tablet—F. Seregni	15 00
Expressage—Patterson & Co.	65
Postage stamps—S. H. Wagener	10 00
Postage stamps—S. H. Wagener	10 00
Postage stamps—S. H. Wagener	15 00
Fifteen cases Starlight oil—Goldberg, Bowen & Co.	37 50
Freight on same—Goldberg, Bowen & Co.	2 40
Refiguring surfaces of spectroscope—John A. Brashear	20 00
Payment of all charges for expressage up to January 1, 1890—Mount Hamilton Stage Co.	400 00
One hundred and fifty porcelain insulators—Paul Seilers Electrical Works	2 65
One hundred and fifty 2-inch screws—Paul Seilers Electrical Works	1 50
Boxing same—Paul Seilers Electrical Works	10
Eight new shoes—T. A. Carroll	4 00
One hundred and fifty insulators and screws—Paul Seilers Electrical Works	4 25
Refilling level and caps—A. Lietz & Co.	3 50
One door—Santa Clara Valley Mill and Lumber Co.	5 00
One ream P. O. paper—H. A. Mathews	1 00
Two and one half pounds cotton rope—H. A. Mathews	1 25
One ream manilla paper—H. A. Mathews	3 50
One box rubber bands—H. A. Mathews	65
Five dozen 8x10 dry plates—E. & H. T. Anthony & Co.	15 68
One H. W. G. lantern—E. & H. T. Anthony & Co.	
Five boxes F. P. paper—E. & H. T. Anthony & Co.	
One folio diary—Payot, Upham & Co.	2 50
Five dozen 8x10 carbott plates—Samuel C. Partridge	15 15
Twenty ounces pyrogallie acid—H. A. Mathews	9 00
Two dozen nick. butts—H. A. Mathews	10 40
One Billings wrench—H. A. Mathews	1 00
One thousand brass head tacks—H. A. Mathews	1 50
One half dozen balls hemp cord—H. A. Mathews	1 50
One dozen stove bolts—H. A. Mathews	25
Ten dozen Acme note—H. A. Mathews	10 50
Two dozen oil boards—H. A. Mathews	1 50
Carpenter work—S. Howarth	55 00
Expenses to Lick Observatory and return—J. C. Rowell	5 50
Eleven indexes—Payot, Upham & Co.	3 30
One dozen transfer cases—Payot, Upham & Co.	4 20
Five yards curtaining—Rucker Bros.	1 25
One hank cord—Farmers Union	1 00
Three pounds twine—Farmers Union	90
Ten pounds putty—Farmers Union	40
Vaseline—Farmers Union	50

Expressage on one case models—Patterson & Co.	1 00
Freight on one case models—Southern Pacific Co.	4 00
Ives' strata and altitude map—J. T. B. Ives	14 00
Expressage—Wells, Fargo & Co.	4 75

APPENDIX No. 18—University Site Improvements.

One coil barbed wire and staples—Dunham, Carrigan & Hayden Co.	\$4 75
Labor, as per July payroll	227 00
Labor, as per August payroll	226 00
One Johnson hose coupling—H. W. Fenson	1 00
Labor, as per September payroll	210 00
Treatment of horse's eyes—Dr. A. de Tavel	84 50
Baling seventy-eight bales of hay (10 $\frac{1}{2}$ tons)—John Meyers	19 00
One lawn sprinkler—Pierce & Co.	2 50
Three iron wedges—Nelson & McLellan	1 00
One gallon lard oil—Joseph McClain	1 00
Two cans grease—Joseph McClain	30 00
One crosscut saw—Dunham, Carrigan & Hayden Co.	3 15
One one-man saw—Dunham, Carrigan & Hayden Co.	2 50
One pair Climax handles—Dunham, Carrigan & Hayden Co.	5 00
One Morrel saw-set—Dunham, Carrigan & Hayden Co.	1 50
One half dozen mill files—Dunham, Carrigan & Hayden Co.	5 00
Expressage (one roll wire and one package)—Patterson & Co.	80 00
Two hundred pounds coarse salt—Joseph McClain	2 50
New crossbar in rake—Nelson & McLellan	2 00
New tooth cleaner in rake—Nelson & McLellan	5 00
One casting and bolt for mower—Nelson & McLellan	75 00
Eight new shoes—Nelson & McLellan	4 00
Labor, as per October payroll	219 00
Steeling two picks—Nelson & McLellan	1 50
Two clevis pins and keys—Nelson & McLellan	2 00
One pick steeled and sharpened—Nelson & McLellan	9 00
Eight new shoes—Nelson & McLellan	4 00

DISBURSEMENTS—Continued.

Repairing harness—P. Nichelmann	\$8 00
Two zinc collar pads—P. Nichelmann	1 00
Four hame straps—P. Nichelmann	80 00
One pair spreads and rings—P. Nichelmann	50 00
Labor, as per November payroll	224 00
Fifteen hundred and thirty-one pounds seed oats—Paul Keyser	21 43
Labor, as per December payroll	218 00
Two shares sharpened, and plow handle—Nelson & McLellan	1 50
Eight new shoes—Nelson & McLellan	4 00
Eight 8-ounce vials—A. B. Merrill	35 00
One journal—A. B. Merrill	1 50
Labor, as per January payroll	201 00
Expressage on eighteen sacks of oats—Patterson & Co.	3 50
Labor, as per February payroll	157 00
Repairing chain and nut to cart—Nelson & McLellan	75 00
Crank to grindstone—Nelson & McLellan	1 50
Two shares sharpened, and one bolt—Nelson & McLellan	75 00
Eight new shoes—Nelson & McLellan	4 00
Labor, as per March payroll	255 00
One 1 $\frac{1}{2}$ -inch elbow—Alameda Water Co.	15 00
Putting in pipe, etc., on campus—J. J. Dunn	190 02
Labor for April, as per payroll	305 00
Blacksmithing for April—Nelson & McLellan	14 10
One half dozen lawn rakes—Joseph McClain	4 20
Labor, as per May payroll	330 00
Blacksmithing for May—Nelson & McLellan	10 50

\$2,981 69

APPENDIX No. 19—University Printing Office.

Expressage—Patterson & Co.	\$12 35
Type—Tatum & Bowen	255 33
Paper—Blake, Moffitt & Towne	87 72
Ink—E. J. Shattuck & Co.	27 80
Printing press—Tatum & Bowen	336 25
Traveling expenses—J. W. Flynn	1 50
Sundries	3 50

\$724 45

STATE APPROPRIATION (ONE-CENT FUND) FOR THE FISCAL YEAR
ENDING JUNE 30, 1889.

Statement of expenditures of the State University Fund, as directed in an Act of the Legislature of the State of California, entitled "An Act to provide for the permanent support and improvement of the University of California by the levy of a rate of taxation and the creation of a fund therefor," approved February 14, 1887.

RECEIPTS.	
May 13, 1889, by cash on Controller's warrant.....	\$92,385 71
DISBURSEMENTS.	
<i>To College of Chemistry.</i>	
Gas, from October, 1887, to June, 1888—Oakland Gas Co.....	\$150 64
Expressage on one barrel alcohol—Patterson & Co.....	1 25
Expressage on two cases, one barrel—Patterson & Co.....	1 50
One compression faucet—M. De La Montanya.....	75
Two gas cocks—M. De La Montanya.....	80
Sixteen assorted fittings—M. De La Montanya.....	1 60
Twelve feet gas pipe—M. De La Montanya.....	60
One foot tapering stove-pipe—M. De La Montanya.....	60
Two feet 6-inch stove-pipe—M. De La Montanya.....	80
Two feet 3½-inch stove-pipe—M. De La Montanya.....	70
One corrugated elbow, 6-inch—M. De La Montanya.....	75
One corrugated elbow, 5½-inch—M. De La Montanya.....	65
Twenty-one pounds acetic acid—Justinian Caire.....	3 78
Six hundred and twenty-four grains platinum—Justinian Caire.....	12 84
Twenty filters—Justinian Caire.....	27 00
Two Bunsen carbonic apparatus—Justinian Caire.....	2 00
Sixteen and one half feet steel wire cloth—Justinian Caire.....	6 38
One steel anvil.....	3 25
One hatchet.....	65
Twenty-one assorted drills.....	3 00
One set drills.....	30
Three wrenches.....	1 25
Bill of Franz Schilling, of Gehlberg, Germany, in marks; total in dollars and cents:	Marks.
One hundred and forty round bottles, No. 1, at .55 M.....	77.00
Case and packing.....	8.00
Sixty-two round bottles, No. 1, at .55 M.....	34.10
Two hundred and four round bottles, No. 4, at .30 M.....	61.20
Case and packing.....	8.00
Two hundred and three round bottles, No. 2, at .43 M.....	87.29
Thirteen preparation dishes, with cover, at .70 M.....	9.10
Case and packing.....	8.00
Two hundred and thirty-two round bottles, No. 3, at .40 M.....	92.80
Case and packing.....	8.00
Five sets beakers, twelve in a set, at 4.75 M.....	23.75
Twelve sets beakers, twelve in a set, at 3.00 M.....	36.00
Twenty-six sets beakers, ten in a set, at 2.00 M.....	52.00
Four sets beakers, eight in a set, at 1.50 M.....	6.00
Case and packing.....	7.00
Forty-six sets beakers, eight in a set, at 1.50 M.....	69.00
Fifty sets beakers, five in a set, at .75 M.....	37.50
Fifty-two sets beakers, three in a set, at .38 M.....	19.76
Fifty flasks, 100 gr., at 6.00 M. per 100.....	3.00
Twenty-five flasks, 60 gr., at 5.50 M. per 100.....	1.37
Twelve flasks, 30 gr., at 5.00 M. per 100.....	.60
Fifty flasks, 200 gr., at 9.00 M. per 100.....	4.50
Case and packing.....	7.00
Twenty-five flasks, 1,000 gr., at .25 M.....	6.25
Fifty flasks, 500 gr., at .18 M.....	9.00
Two hundred flasks, 250 gr., at .10 M.....	20.00
Case and packing.....	9.00
Thirty flasks, 750 gr., at .20 M.....	6.00
Two Erlenmeyer's flasks, 1,000 gr., at .33 M.....	.66
Ten Erlenmeyer's flasks, 500 gr., at .22 M.....	2.20
Twenty Erlenmeyer's flasks, 250 gr., at .14 M.....	2.80
Twenty-five Erlenmeyer's flasks, 100 gr., at .07 M.....	1.75

DISBURSEMENTS—Continued.

Twenty-five Erlenmeyer's flasks, 60 gr., at .06 M.....	M.1.50
Five retorts, without tubes, 60 gr., at .09 M.....	.45
Six retorts, without tubes, 100 gr., at .10 M.....	.60
Five retorts, without tubes, 200 gr., at .12½ M.....	.62
Five retorts, without tubes, 250 gr., at .16 M.....	.80
One retort, without tube, 500 gr., at .22 M.....	.22
Five retorts, without tubes, 1,000 gr., at .38 M.....	1.80
Six retorts, with tubes and stoppers, 100 gr., at .20 M.....	1.20
Five retorts, with tubes and stoppers, 250 gr., at .30 M.....	1.50
Five retorts, with tubes and stoppers, 500 gr., at .40 M.....	2.00
Three retorts, with tubes and stoppers, 2,000 gr., at .80 M.....	2.40
Two retorts, with tubes and stoppers, 4,000 gr., at 1.25 M.....	1.50
Case and packing.....	9.00
Six chloride of calcium tubes, No. 490 a, at .35 M.....	2.10
Six chloride of calcium tubes, No. 490 b, at .35 M.....	2.10
Six chloride of calcium tubes, No. 490 c, at .35 M.....	2.10
Six potash apparatus, No. 397, at .40 M.....	2.40
Two potash apparatus, No. 398, at .90 M.....	1.80
Two potash apparatus, No. 399, at .41 M.....	.82
Two potash apparatus, No. 400, at .45 M.....	.90
Two potash apparatus, No. 401, at .41 M.....	.82
Two potash apparatus, No. 395, at 1.80 M.....	3.60
Three nitrogen apparatus, No. 390, at .50 M.....	1.50
Two nitrogen apparatus, No. 392, at .40 M.....	.80
Twelve chloride of calcium tubes, No. 388, at .40 M.....	4.80
One reduction apparatus, No. 424, at 1.00 M.....	1.00
One apparatus, No. 408, at .88 M.....	.88
One apparatus, No. 423, at .70 M.....	.70
Two apparatus, No. 420, at 1.00 M.....	2.00
Two apparatus, No. 421, at .70 M.....	1.40
Two apparatus, No. 422, at .40 M.....	.80
One apparatus, No. 403, at 2.60 M.....	2.60
One apparatus, No. 404, at 2.60 M.....	2.60
Two arsenic testing tiles, No. 467, at .35 M.....	.70
Five bulb tubes, No. 475, at .20 M.....	1.00
One hundred and seventy-five glass tears, No. 474, at 1.80 M. per 100.....	3.15
One warming tube, No. 510.....	1.00
Five tubes, No. 524, at .40 M.....	2.00
Five tubes, No. 523, at .40 M.....	2.00
Two tubes, No. 520, at .12 M.....	.24
Ten flasks, 10 gr., at .05 M.....	.50
Ten flasks, 15 gr., at .06 M.....	.60
Ten flasks, 20 gr., at .07 M.....	.70
Ten flasks, 25 gr., at .08 M.....	.80
Ten flasks, 40 gr., at .09 M.....	.90
One retort, without tubes, 10 gr., at .06 M.....	.06
One retort, without tubes, 15 gr., at .08 M.....	.08
One retort, without tubes, 20 gr., at .10 M.....	.10
One retort, without tubes, 25 gr., at .13 M.....	.13
One retort, without tubes, 40 gr.....	.15
One retort, without tubes, 50 gr.....	.17
One retort, without tubes, 75 gr.....	.20
One retort, with tubes, 10 gr.....	.10
Two retorts, with tubes, 15 gr., at .13 M.....	.26
Two retorts, with tubes, 20 gr., at .16 M.....	.32
One retort, with tubes, 25 gr.....	.18
Two retorts, with tubes, 40 gr., at .20 M.....	.40
One retort, with tubes, 50 gr.....	.22
One retort, with tubes, 75 gr.....	.28
Six tubes, No. 573, at .45 M.....	2.70
Five safety funnels, No. 591, at .70 M.....	3.50
Five safety funnels, No. 592, at .50 M.....	2.50
Six drying tubes, No. 605, at .33 M.....	1.98
Six drying tubes, No. 606, at .30 M.....	1.80
One gas regulator, No. 438, at 1.60 M.....	1.60
Two gas regulators, No. 439, at .65 M.....	1.30
Two glass pipettes, No. 432, at 1.00 M.....	2.00
Four glass pipettes, No. 439, at 1.20 M.....	4.80
Two glass pipettes, No. 433, at 1.00 M.....	2.00
Two glass pipettes, No. 437, at 3.00 M.....	6.00
Four apparatus, No. 383, at .80 M.....	3.20
Twenty-six apparatus, No. 359, at 1.00 M.....	26.00

DISBURSEMENTS—Continued.

Six pipettes, without mark, 10 c.c.m., at .05 M.	M.0.30
Five pipettes, without mark, 10 c.c.m., at .06 M.	.30
Seven pipettes, without mark, 25 c.c.m., at .07 M.	.49
Eight pipettes, without mark, 50 c.c.m., at .10 M.	.80
Six pipettes, without mark, 75 c.c.m., at .12 M.	.72
Three pipettes, without mark, 100 c.c.m., at .15 M.	.45
Two pipettes, without mark, 125 c.c.m., at .20 M.	.40
Two pipettes, without mark, 140 c.c.m., at .25 M.	.50
Twelve chloride of calcium tubes, No. 489, at .05 M.	.60
Five chloride of calcium tubes, No. 487, at .15 M.	.75
Case and packing	9.00
Twenty-six tiles for arsenic testing, No. 469, at .03 M.	.78
Twenty-six tiles for arsenic testing, No. 470, at .03 M.	.78
Twenty-six tiles for arsenic testing, No. 471, at .03 M.	.78
Three pipettes, with mark, 1 c.c.m., at .10 M.	.30
Three pipettes, with mark, 2 c.c.m., at .12 M.	.36
Three pipettes, with mark, 5 c.c.m., at .15 M.	.45
Five pipettes, with mark, 10 c.c.m., at .18 M.	.90
Twelve pipettes, with mark, 15 c.c.m., at .20 M.	2.40
Five pipettes, with mark, 20 c.c.m., at .25 M.	1.25
Two pipettes, with mark, 25 c.c.m., at .30 M.	.60
One pipette, with mark, 75 c.c.m., at .42 M.	.42
Three pipettes, with mark, 100 c.c.m., at .50 M.	1.50
Two cylinders, with mouth, 5 c.c.m., at .30 M.	.60
Two cylinders, with mouth, 10 c.c.m., at .40 M.	.80
Seven graduated stoppered bottles, 5 c.c.m., at .10 M.	.70
Five graduated stoppered bottles, 10 c.c.m., at .10 M.	.50
Two graduated stoppered bottles, 20 c.c.m., at .15 M.	.30
Five graduated stoppered bottles, 25 c.c.m., at .15 M.	.75
Five graduated stoppered bottles, 50 c.c.m., at .20 M.	1.00
Five graduated stoppered bottles, 100 c.c.m., at .25 M.	1.25
Two graduated stoppered bottles, 50 and 55 c.c.m., at .30 M.	.60
Three graduated stoppered bottles, 200 c.c.m., at .35 M.	1.05
Four graduated stoppered bottles, 250 c.c.m., at .45 M.	1.80
Three graduated stoppered bottles, 300 c.c.m., at .50 M.	1.50
Five graduated stoppered bottles, 500 c.c.m., at .60 M.	3.00
Two graduated stoppered bottles, 100 and 110 c.c.m., at .40 M.	.80
Two graduated stoppered bottles, 250 c.c.m., at .70 M.	1.40
Two graduated stoppered bottles, 2,000 c.c.m., at 1.50 M.	3.00
One Woulff bottle, three necks, 10 gr.	.33
One Woulff bottle, three necks, 25 gr.	.43
One Woulff bottle, three necks, 50 gr.	.50
One Woulff bottle, three necks, 75 gr.	.60
One Woulff bottle, three necks, 100 gr.	.70
Two thermometers, graduated, 10-100 degrees, at 1.50 M.	3.00
Two thermometers, graduated, 100-200 degrees, at 3.00 M.	6.00
Two thermometers, graduated, 200-360 degrees, at 3.40 M.	6.80
One thermometer, scale 50-70 degrees	6.00
One thermometer, scale 50-70 degrees	5.00
One thermometer, scale 50-70 degrees	6.00
Three thermometers, scale 100 degrees, at 1.50 M.	4.50
Six thermometers, scale 250 degrees, at 1.80 M.	10.80
Six thermometers, scale 200 degrees, at 1.80 M.	10.80
Five thermometers, scale 360 degrees, at 2.00 M.	10.00
Two thermometers, scale 100 degrees, at 1.35 M.	2.70
Two thermometers, paper scale, 100 degrees, at 1.00 M.	2.00
One thermometer, graduated in $\frac{1}{10}$ degree	1.50
One thermometer, graduated in $\frac{1}{10}$ degree	1.80
Thirty-three thermometer stands, at .10 M.	3.30
Five safety funnels, No. 585, at .15 M.	.75
Six safety funnels, No. 586, at .20 M.	1.20
Five safety funnels, No. 587, at .35 M.	1.75
Two safety funnels, No. 588, at .25 M.	.50
Two safety funnels, No. 589, at .25 M.	.50
Two safety funnels, No. 590, at .33 M.	.66
Twenty funnel tubes, No. 601, at .12 M.	2.40
Twenty-two funnel tubes, No. 602, at .10 M.	2.20
One flask, with movable head, 50 gr.	.40
One flask, with movable head, 75 gr.	.45
One flask, with movable head, 100 gr.	.50
One flask, with movable head, 125 gr.	.60

DISBURSEMENTS—Continued.

One flask, with movable head, 150 gr.	M.0.70
Two flasks for gas washing, 100 gr., at .75 M.	1.50
One flask for gas washing, 200 gr.	1.00
One flask for gas washing, 500 gr.	1.25
One flask for gas washing, 1,000 gr.	2.00
One flask for gas washing, 750 gr.	1.70
One flask for gas washing, 250 gr.	1.10
Two flasks for gas washing, 200 gr., at 1.00 M.	2.00
Fifteen glass stopcocks, No. 612, at 1.00 M.	15.00
One 3-mouthed stopcock	1.75
Two large stopcocks, at 2.00 M.	4.00
Two apparatus, with soxhlets, 100 gr., at 1.75 M.	3.50
Two apparatus, with soxhlets, 60 gr., at 1.40 M.	2.80
One flask for washing gases, $\frac{1}{4}$ litre	.75
One flask for washing gases, $\frac{1}{4}$ litre	1.00
Two chloride of calcium cylinders, 30 c.m. high, at .75 M.	1.50
Four chloride of calcium cylinders, 28 c.m. high, at .65 M.	2.60
Five chloride of calcium cylinders, 25 c.m. high, at .60 M.	3.00
One head, No. 503, 10 gr.	.12
One head, No. 503, 15 gr.	.15
One head, No. 503, 20 gr.	.17
One head, No. 503, 25 gr.	.20
One head, No. 503, 50 gr.	.25
One head, No. 503, 75 gr.	.30
One head, No. 503, 100 gr.	.35
One eye syringe, No. 465	.80
Two round-bottom flasks, 10 gr., at .07 M.	.14
Two round-bottom flasks, 20 gr., at .08 M.	.16
Two round-bottom flasks, 25 gr., at .09 M.	.18
Two round-bottom flasks, 30 gr., at .10 M.	.20
Two round-bottom flasks, 40 gr., at .11 M.	.22
Two round-bottom flasks, 50 gr., at .12 M.	.24
Two round-bottom flasks, 75 gr., at .13 M.	.26
Two pear-shaped flasks, 10 gr., at .07 M.	.14
Two pear-shaped flasks, 20 gr., at .08 M.	.16
Two pear-shaped flasks, 25 gr., at .09 M.	.18
Two pear-shaped flasks, 30 gr., at .10 M.	.20
Two pear-shaped flasks, 40 gr., at .11 M.	.22
Two pear-shaped flasks, 50 gr., at .12 M.	.24
Two pear-shaped flasks, 75 gr., at .13 M.	.26
Twenty flasks, 50 gr., at .05 M.	1.10
Twelve flasks, 75 gr., at .06 M.	.72
Case and packing	8.00
Twenty reduction tubes, at .20 M.	4.00
One hundred test tubes, 15 c.m. long, 16 m.m.	2.70
One hundred test tubes, 18 c.m. long, 16 m.m.	3.20
One hundred test tubes, 20 c.m. long, 20 m.m.	4.00
One hundred test tubes, 15 c.m. long, 20 m.m.	3.10
One hundred test tubes, 10 c.m. long, 20 m.m.	2.50
One hundred test tubes, 18 c.m. long, 20 m.m.	3.70
One hundred test tubes, 10 c.m. long, 16 m.m.	2.00
One hundred test tubes, 10 c.m. long, 13 m.m.	1.60
One hundred test tubes, 12 c.m. long, 20 m.m.	3.00
One hundred test tubes, 14 c.m. long, 13 m.m.	2.20
One hundred test tubes, 20 c.m. long, 33 m.m.	6.00
One hundred test tubes, 18 c.m. long, 13 m.m.	2.90
One hundred test tubes, 8 c.m. long, 10 m.m.	1.20
One hundred test tubes, 10 c.m. long, 10 m.m.	1.30
One hundred test tubes, 12 c.m. long, 10 m.m.	1.80
One hundred test tubes, 5 c.m. long, 6 m.m.	.75
One hundred test tubes, 5 c.m. long, 10 m.m.	1.00
One hundred test tubes, 5 c.m. long, 13 m.m.	1.20
One hundred test tubes, 5 c.m. long, 16 m.m.	1.40
One hundred test tubes, 5 c.m. long, 20 m.m.	1.50
Five dropping tubes, at .18 M.	.90
Eight $\frac{1}{4}$ -litre flasks, at .30 M.	2.40
Twenty reduction tubes, 1 bulb, at .20 M.	4.00
Ten reduction tubes, 2 bulb, at .30 M.	3.00
One pair colorimeter cylinders	5.50
Three flasks, with tubes, 10 gr., at .10 M.	.30
Three flasks, with tubes, 20 gr., at .12 M.	.36
Two flasks, with tubes, 25 gr., at .12 M.	.24
Three flasks, with tubes, 30 gr., at .13 M.	.39

DISBURSEMENTS—Continued.

Two flasks, with tubes, 40 gr., at .15 M.	M.0.30
Two flasks, with tubes, 50 gr., at .16 M.	.32
Two flasks, with tubes, 75 gr., at .18 M.	.36
Two flasks, with tubes, 100 gr., at .20 M.	.40
One separatory funnel, $\frac{1}{2}$ litre	1.50
One separatory funnel, $\frac{1}{2}$ litre	2.00
One separatory funnel, 1 litre	2.50
One separatory funnel, 200 gr.	1.25
Two separatory funnels, 150 gr., at 1.25 M.	2.50
Five funnels, 5 c.m. diameter, at .07 M.	.35
One hundred test tubes, 10 c.m. by 13 m.m.	1.60
One hundred test tubes, 10 c.m. by 16 m.m.	2.00
Case and packing	9.00
One hundred test tubes, 18 c.m. long, 33 m.m. diameter	5.50
One hundred test tubes, 15 c.m. long, 26 m.m. diameter	3.90
One hundred test tubes, 15 c.m. long, 33 m.m. diameter	4.50
One hundred test tubes, 10 c.m. long, 26 m.m. diameter	3.00
One hundred test tubes, 18 c.m. long, 20 m.m. diameter	3.70
One hundred test tubes, 18 c.m. long, 26 m.m. diameter	4.50
One hundred test tubes, 8 c.m. long, 16 m.m. diameter	1.50
One hundred test tubes, 8 c.m. long, 13 m.m. diameter	1.30
One hundred test tubes, 8 c.m. long, 6 m.m. diameter	1.00
Ten test tubes, 4 c.m. long, 6 m.m. diameter	.30
Ten test tubes, 8 c.m. long, 13 m.m. diameter	.50
Ten test tubes, 10 c.m. long, 15 m.m. diameter	.55
Ten test tubes, 12 c.m. long, 20 m.m. diameter	.60
Ten test tubes, 15 c.m. long, 26 m.m. diameter	.70
One washing bottle, $\frac{1}{2}$ litre	.85
One washing bottle, $\frac{1}{2}$ litre	1.00
One washing bottle, 1 litre	1.75
Six distillation tubes, with 2 bulbs, at 1.00 M.	6.00
Six distillation tubes, with 3 bulbs, at 1.50 M.	9.00
Five distillation tubes, with 4 bulbs, at 2.00 M.	10.00
Six distillation tubes, with 5 bulbs, at 3.00 M.	18.00
Six distillation tubes, with 6 bulbs, at 4.00 M.	24.00
Twelve weighing bottles, at .35 M.	4.20
One hundred and fifty homœopathic bottles, 3 gr., at .12 M.	18.00
Twenty-six homœopathic bottles, 5 gr., at .14 M.	3.77
Twenty-five homœopathic bottles, 10 gr., at .16 M.	4.00
Twenty-six homœopathic bottles, 15 gr., at .18 M.	4.68
Twenty-five homœopathic bottles, 20 gr., at .20 M.	5.00
One urine tester—Dr. Vogel	1.25
One urine tester—Dr. Heller	.55
One hydrometer, 70	.60
One hydrometer, 30	.50
One milk tester, with thermometer	1.50
Six covers, at .10 M.	.60
Case and packing	9.00
Twenty preparation tubes, 200x85 m.m., at 1.00 M.	20.00
Nine preparation tubes, 160x70 m.m., at .70 M.	6.30
Fourteen preparation tubes, 130x50 m.m., at .50 M.	7.00
Eighteen preparation tubes, 100x30 m.m., at .33 M.	5.94
Twelve preparation tubes, 85x30 m.m., at .32 M.	3.84
Twelve preparation tubes, 50x25 m.m., at .25 M.	3.00
Eight round bottles, 200 gr., at .18 M.	1.44
Six round bottles, 2,000 gr., at .80 M.	4.80
Four round bottles, 3,000 gr., at 1.25 M.	5.00
Twelve round bottles, 2,000 gr., at .75 M.	9.00
One Woulff bottle, three necks, 200 gr., at .45 M.	.45
One Woulff bottle, three necks, 250 gr., at .50 M.	.50
One Woulff bottle, 500 gr., at .70 M.	.70
Case and packing	8.00
Two round bottles, 3,000 gr., at 1.25 M.	2.50
Five round bottles, 5,000 gr., at 1.90 M.	9.50
Two bottles, with tubulure, 8 litres, at 3.00 M.	6.00
One bottle, with tubulure, 6 litres	2.50
One bottle, with tubulure, 5 litres	2.00
One double cylinder, 2,500 c.c.m.	5.50
One double cylinder, 2,000 c.c.m.	5.30
One double cylinder, 1,500 c.c.m.	4.30
One double cylinder, 1,000 litres	3.20
One double cylinder, 100 c.c.m.	1.10
Two double cylinders, 50 c.c.m., at .85 M.	1.70

DISBURSEMENTS—Continued.

Two double cylinders, 25 c.c.m., at .70 M.	M.1.40
One cylinder, with mouth, 500 c.c.m.	1.50
Two cylinders, with mouth, 50 c.c.m.	1.20
Six gas bottles, 1,000 gr., at .45 M.	2.70
Three gas bottles, 250 gr., at .20 M.	.60
One Woulff bottle, with two necks, 1,000 gr.	.80
One cylinder, with double spout, 1,000 c.c.m.	2.70
Two bottles, with tubulure, 1 litre	1.50
Casing and packing	8.00
Twenty-two kilos. soft glass tubing, Nos. 1-6, at 1.00 M.	22.00
Five and one half kilos. glass stirring rods, at 1.00 M.	5.50
One burette, 100 c.c.m.	2.20
One burette, 100 c.c.m.	3.10

Bill of C. A. F. Kahlbaum, Berlin—amounts in marks,	
total in dollars:	
Five kilos. aluminium ammonium sulphate	3.50
Two and one half kilos. arsenic	3.00
One half kilo. calcium sulphide	1.50
One kilo. hydrofluoric acid	1.50
One quarter kilo. aluminium sulphate	2.00
One and one half kilos. pulverized iron	1.80
One half kilo. iron sulphate	.50
One half kilo. iodine	17.50
One quarter kilo. potassium arsenite	1.13
One quarter kilo. potassium arsenate	1.13
One quarter kilo. chromium oxide	1.13
One half kilo. chromic acid	6.00
Two and one half kilos. iron sesquichloride	2.50
Two and one half kilos. aluminium hydrate	2.00
Two and one half kilos. aluminum sulphate	.75
Two and one half kilos. aluminum chloride	2.75
Two and one half kilos. aluminum nitrate	5.75
Two and one half kilos. aluminum sulphate (commercial)	1.25
One and one half kilos. arsenic acid (commercial)	.90
One hundred and twenty-five gr. copper	.75
Two and one half kilos. barium nitrate	3.25
Ten kilos. ferric acid	20.00
One quarter kilo. copper turnings	.63
One quarter kilo. ferrous oxide	1.00
One quarter kilo. iron oxide	.63
Twenty-nine gr. magnesium	2.90
Twenty-five gr. aluminium	4.38
One half book aluminium (book form)	2.25
One kilo. iron sulphide	1.00
Two hundred and fifty gr. potassium pyrosulphate	.63
Two hundred and fifty gr. potassium phosphate	1.50
Two hundred and fifty gr. ammonium iodide	10.00
Two hundred and fifty gr. ammonium sulphate	.33
Two hundred and fifty gr. magnesium carbonate	1.10
Two hundred and fifty gr. magnesium sodium phosphate	1.25

DISBURSEMENTS—Continued.

One kilo. arsenic acid	M.1.00
Two hundred and fifty gr. ammonium bichromate	1.50
Two hundred and fifty gr. cobalt carbonate	6.25
Two hundred and fifty gr. ammonium bromide	1.20
Fifty gr. iron sesquichloride	.50
One hundred gr. coraline	1.00
One fourth kilo. antimony	2.50
Fifty gr. cobalt chloride (free of nickel)	2.00
One kilo. commercial antimony	1.10
One fourth kilo. lead	1.00
Fifty gr. aluminium in bars	6.50
One fourth kilo. cadmium	2.50
One fourth kilo. antimony trioxide	1.50
One fourth kilo. arsenious acid	.88
One half kilo. potassium bisulphate	1.13
One half kilo. antimonie acid	5.50
One fourth kilo. peroxide of lead	.88
One hundred and twenty-five gr. potassium iodate	5.63
One kilo. benzotrichloride	16.00
One fourth kilo. phosphoric acid	1.50
One half kilo. sodium sulphate	.20
Two and one half kilos. strontium nitrate	2.50
Two kilos. arsenic acid	3.00
Five kilos. fluorspar	2.00
Two and one half kilos. potassium bichromate	4.50
One kilo. potassium chloride	.80
Five kilos. potassium bichromate (commercial)	5.00
Two and one half kilos. calcium chloride	1.25
One half kilo. anhydrous acetic acid	10.00
Two and one half kilos. potassium hydrate	4.25
Five kilos. barium carbonate	6.50
Two and one half kilos. calcium carbonate	1.50
Two and one half kilos. ammonium carbonate	3.75
Ten kilos. ammonium carbonate (commercial)	10.00
Two and one half kilos. sodium hydrate	4.00
Five kilos. barium hydrate	3.00
Five kilos. magnesium sulphate	1.50
One and one half kilos. magnesium carbonate	1.35
Five kilos. sodium bisulphide	5.00
Two hundred and fifty gr. magnesium oxide	.63
Five kilos. barium chloride	3.00
Two and one half kilos. potassium hydrate	11.25
Two and one half kilos. potassium hydrate	12.00
Two hundred and fifty gr. asbestos	1.00
One kilo. potassium carbonate	2.20
Two and one half kilos. lead nitrate	2.75
One kilo. chloral hydrate	8.00
One kilo. potassium sulphate	1.00
One half kilo. calcium carbonate	1.50
Two and one half kilos. potassium nitrate	2.75
Two and one half kilos. potassium sodium carbonate	9.00
Two and one half kilos. barium hydrate	3.50
One half kilo. barium carbonate	2.00
Two and one half kilos. potassium bicarbonate	3.75
Two hundred and fifty gr. baric acid	.38
Two hundred and fifty gr. precipitated manganese dioxide	1.88
Two hundred and fifty gr. calcium phosphate	.50
One kilo. lead chromate	4.00
One half kilo. calcium oxide	.35
One half kilo. potassium nitrate	3.00
One fourth kilo. sodium hyposulphite	2.13
Two and one half kilos. potassium hydrate	4.50
One fourth kilo. barium sulphide	.93
One half kilo. potassium iodide	13.50
One fourth kilo. manganese chloride	.63
One fourth kilo. calcium phosphate	1.38
One half kilo. barium peroxide (hydrated)	3.25
One fourth kilo. potassium bromide	1.00
One quarter kilo. potassium chromate	1.00
One quarter kilo. lead carbonate	.88
One hundred and twenty-five gr. manganese sulphate	.35
One hundred and twenty-five gr. potassium bromate	2.13
Twenty-five gr. potassium periodate	4.50

DISBURSEMENTS—Continued.

One half gr. osmium acid	M.2.40
One and one half kilos. potassium permanganate	3.45
One kilo. copper carbonate	3.50
Ten kilos. sodium phosphate	10.00
Five kilos. sodium bicarbonate	4.25
Two and one half kilos. sodium carbonate	1.50
Two and one half kilos. sodium hyposulphite	1.75
Two and one half kilos. sodium hydrate	14.00
Two and one half kilos. sodium hydrate, in sticks	3.50
Two and one half kilos. sodium carbonate	5.50
One kilo. sodium nitrate	1.20
One kilo. potassium cyanide	5.00
Two kilos. chloroform (commercial)	7.60
Two and one half kilos. potassium hydrate	5.00
One kilo. sodium chloride	.60
One kilo. manganese carbonate	5.50
One half kilo. molybdic acid	4.50
One half kilo. soda lime	1.25
One quarter kilo. zinc oxide	.63
One quarter kilo. sulphur	.28
One half kilo. copper perchloride	2.00
One half kilo. tungsten acid sodium	1.25
One half kilo. strontium nitrate	1.30
One quarter kilo. nickel carbonate	2.13
One half kilo. ammonium bicarbonate	2.50
One half kilo. sulphur	.25
Two and one half kilos. zinc dust	1.33
One quarter kilo. copper oxide	2.00
One half kilo. copper sulphate	.50
One quarter kilo. strontium chloride	.28
One quarter kilo. sodium nitrate	1.25
One half kilo. ammonium molybdate	4.50
One quarter kilo. sodium silicate	1.50
One quarter kilo. crystallized sulphur	.43
One quarter kilo. sodium pyrophosphate	.50
One quarter kilo. zinc chloride	.55
One quarter kilo. sodium nitrate	.23
One quarter kilo. nickel chloride	1.75
One quarter kilo. nickel sulphate	.63
One quarter kilo. zinc chloride	.95
One quarter kilo. copper perchloride	2.25
One quarter kilo. mercury nitrate	1.83
One half kilo. mercury bichloride	3.25
One half kilo. mercury oxide	4.40
Twenty-five gr. silver	5.50
One quarter kilo. nickel ammonium sulphate	.53
One hundred and twenty-five gr. sodium hydrate	2.75
Two hundred and fifty gr. sodium bisulphate	.30
One hundred and twenty-five gr. phosphoric acid	.63
One quarter kilo. strontium hydrate	1.75
Two hundred and fifty gr. nickel hydrate	1.50
Two hundred and fifty gr. mercury binitrate	2.20
Two hundred and fifty gr. tin oxide	1.25
One half kilo. commercial bismuth	10.00
One quarter kilo. copper oxide	1.13
One quarter kilo. mercury oxide	2.25
One hundred and twenty-five gr. bismuth hydrate	3.50
Two hundred and fifty gr. mercuric chloride	2.13
One half kilo. No. 1 zinc	3.00
One kilo. No. 2 zinc	1.30
One quarter kilo. tin	1.88
Two hundred and fifty gr. commercial nickel	2.00
One hundred gr. crystallized phosphoric acid	.75
One hundred and twenty-five gr. reduced copper	1.38
Two hundred and fifty gr. sodium amalgam	2.50
Twenty-five gr. lithium carbonate	.88
Ten gr. capric acid	3.70
Ten gr. vanadium acid	5.50
Fifty gr. zinc sodium	1.00
Fifty gr. uranium oxide	4.80
Ten gr. asparaginic acid	3.00
Twenty-five gr. nickel oxide	1.20
Ten gr. aethyl cyanide	1.80

DISBURSEMENTS—Continued.

Twenty-five gr. phosphorous acid.....	M. 1.38
Five gr. thallium.....	1.00
Five gr. thallium carbonate.....	2.00
Five gr. thallium chloride.....	2.00
Two and one half gr. thallium sulphate.....	1.00
Two and one half gr. selenic acid.....	1.13
Two and one half gr. rubidium chloride.....	1.50
Ten gr. cinnamic acid.....	3.00
Ten gr. cumarine.....	2.60
Twenty-five gr. uranium nitrate.....	1.80
Ten gr. vanadium chloride.....	2.50
Ten gr. selenous acid.....	2.60
Ten gr. methyl cyanide.....	2.40
Twenty-five gr. selenium.....	5.00
Fifty gr. bismuth.....	1.80
Ten gr. methyl aniline.....	1.20
Twenty-five gr. bismuth oxide.....	1.13
Twenty-five gr. sodium metaphosphate.....	.75
Twenty-five gr. molybdenum oxide.....	1.75
Ten kilos. glycerine.....	20.00
Two and one half kilos. calcium chloride.....	2.00
Five kilos. naphthaline.....	10.00
One half kilo. carbamide.....	22.50
Ten and one half kilos. iron ammonium sulphate.....	.90
Two kilos. anthracene (commercial).....	12.00
Three kilos. potassium ferro-cyanide (commercial).....	6.60
Two kilos. potassium ferro-cyanide.....	6.00
Two kilos. benzoic acid.....	24.00
Two kilos. oxalic acid.....	4.40
Two and one half kilos. tin bichloride.....	5.75
One kilo. commercial naphthal.....	2.50
One half kilo. anthracene.....	6.00
Two and one half kilos. sodium sulphide.....	1.50
One kilo. binitrate benzol.....	4.50
One and one half kilos. potassium nitrite.....	3.45
One and one half kilos. magnesium chloride.....	1.05
One half kilo. chloric acid.....	9.00
One half kilo. diaethyl aniline.....	6.00
One kilo. potassium sulpho-cyanide.....	3.70
One half kilo. potassium ferri-cyanide.....	3.00
Three kilos. phenol.....	12.00
One quarter kilo. cobalt nitrate.....	2.75
Two hundred gr. dextrine.....	.70
Five hundred gr. chloral.....	6.00
Two hundred gr. potassium cyanide.....	4.00
One hundred gr. tropaeoline.....	2.20
Two hundred and fifty gr. bismuth nitrate.....	4.50
One hundred gr. phthalic acid.....	1.50
One hundred gr. rosolic acid.....	1.00
One hundred gr. alazarine.....	.70
One hundred gr. methyl orange.....	1.50
Two hundred and fifty gr. bismuth nitrate.....	3.25
One hundred gr. pyridine.....	1.00
One hundred gr. sodium nitro-ferri-cyanide.....	6.50
One hundred gr. schleim acid.....	4.50
One hundred gr. dichlorhydrine.....	5.00
Twenty gr. allylsulpho-carbamide.....	2.40
Ten gr. amidopropionic acid.....	3.00
Ten gr. phloroglucine.....	3.00
Twenty gr. amidobenzoic acid.....	3.00
Two gr. tyrosine.....	7.00
Ten gr. alanine.....	3.00
Two gr. leucine.....	6.00
Ten gr. nonylic acid.....	3.00
Thirty gr. undecylenic acid.....	4.50
Ten gr. staeonic acid.....	5.00
Five gr. sarcosine.....	6.00
Ten gr. phloridzine.....	2.00
Ten gr. ostylalcohol.....	3.00
Ten gr. aethyl benzol.....	2.70
Twenty gr. cinnamic acid.....	2.00
Ten gr. cinnamol.....	1.80
Two hundred and fifty gr. tungstenic acid.....	5.00

DISBURSEMENTS—Continued.

Twenty-five kilos. iron sulphide.....	M. 10.00
Two and one half gr. palladium.....	10.00
One half gr. lithium.....	10.00
Cases and packing.....	125.00

REPORT

OF THE

Board of Trustees of State Normal Schools

FOR THE

Years ending June 30, 1889, and June 30, 1890.

SACRAMENTO:

STATE OFFICE, : : : : : J. D. YOUNG, SUPT. STATE PRINTING.
1890.

REPORT OF TRUSTEES OF STATE NORMAL SCHOOL,
SAN JOSÉ.

OFFICE OF THE BOARD OF TRUSTEES OF THE }
STATE NORMAL SCHOOL AT SAN JOSÉ, November, 1890. }

To his Excellency R. W. WATERMAN, Governor:

SIR: We have the honor to submit the following detailed report of receipts and expenditures for carrying on the Normal School under our charge, for the fortieth and forty-first fiscal years. We ask a careful scrutiny of this report, believing it will afford the best guarantee of an economical expenditure of future appropriations.

The number in attendance upon the school is increasing annually, probably owing to the increased demand for teachers. For the next two fiscal years, to enable the school to do well the work for which it is designed, the following appropriations will be needed:

For current expenses	\$82,000
For library	2,000
For care of grounds	4,000
For painting building	1,500
For repairing building	6,000
For museum	500
For manual training	1,000

For a statement of the scholastic work of the school, we respectfully refer you to the catalogue and to the reports of the Principal herewith submitted. We particularly call attention to that part of the Principal's last report in which he speaks of the urgent necessity for the erection of a building especially for the Training Department.

We have the honor to be, very respectfully, your obedient servants,

RALPH LOWE,
President Board of Trustees.

RUTH ROYCE, Secretary.

REPORT OF PRINCIPAL OF SAN JOSE NORMAL SCHOOL.

To the Board of Trustees of the State Normal School at San José:

GENTLEMEN: The work of the school year just closed has been hardly so satisfactory as the work of the preceding year. The inevitable friction attendant upon any radical change in course of study or terms, we have felt in its full force. And yet the school has done good work.

On the twentieth of December diplomas were granted to fifty-eight pupils, who at that time had completed the old course of study. The class was a strong one, and has done and will do the school credit. No public graduating exercises were held, and all were pleased at the quiet, unostentatious manner in which the diplomas were conferred. Of this class of fifty-eight, forty-six are now teaching or have taught since graduation, having readily secured positions. Five we know have not taught, in most cases because they did not desire immediately to begin work; and from seven we have no report.

We present now a class of seventy-one, who have done their work well, and will, we fully believe, work with zeal and intelligence in the schools of the State.

It is perhaps remarkable how large a per cent of our graduates enter at once upon the work of teaching. Of the sixty-one graduated one year ago, all but four have taught or are now teaching. From one of the four we have no report.

STATISTICS.

There have applied for admission to the school during the year 253 candidates, viz.: 203 in September, 47 in January, and 3 in April, at the opening of the three respective terms. Of these, 172 were admitted to some class in the Normal School, and 81 were rejected or withdrew during the examination. For the year, the entire enrollment has been in the various classes: Senior, 211; Middle, 136; Junior, 220; Training Department, 218. The total enrollment in all classes, 785; in the Normal Classes, 567; average for the year in Normal Classes, 472.

The highest number enrolled in the Normal Classes was in September, when the enrollment reached 509. The enrollment for the closing month, June, has been 415. During the year there has been representatives in the school from forty-seven counties in the State, distributed as follows:

Alameda.....	49	San Benito.....	11
Amador.....	3	San Bernardino.....	1
Butte.....	8	San Francisco.....	26
Calaveras.....	2	San Joaquin.....	2
Colusa.....	3	San Luis Obispo.....	10
Contra Costa.....	15	San Mateo.....	3
El Dorado.....	8	Santa Barbara.....	1
Fresno.....	9	Santa Clara.....	195
Humboldt.....	14	Santa Cruz.....	12
Inyo.....	1	Shasta.....	4
Kern.....	1	Sierra.....	4
Lake.....	6	Siskiyou.....	8
Lassen.....	3	Solano.....	11
Marin.....	7	Sonoma.....	9
Mariposa.....	2	Stanislaus.....	2
Mendocino.....	7	Sutter.....	4
Merced.....	11	Tehama.....	1
Modoc.....	2	Trinity.....	2
Monterey.....	9	Tulare.....	7
Napa.....	15	Tuolumne.....	2
Nevada.....	11	Ventura.....	1
Placer.....	11	Yolo.....	7
Plumas.....	1	Yuba.....	2
Sacramento.....	18		

Counties not represented: Alpine, Del Norte, Los Angeles, Mono, and San Diego.

This representation, in a State where the distances traveled are so great, is really surprising, and shows more clearly than any argument that this is a *State* school. True, the representation from Santa Clara County is 34 per cent of the enrollment, but this is not surprising. This is a large county, and the patronage of all such schools is drawn largely from a radius of forty or fifty miles. Many residing in Santa Clara County come from many miles away.

In addition to those enrolled from California, we have had from Colorado, 1; Honolulu, 2; Idaho, 3; Illinois, 1; Michigan, 1; Montana, 1; Nebraska, 1; Nevada, 6; Nova Scotia, 1; Oregon, 1; Pennsylvania, 1; Utah Territory, 1; Washington Territory, 3; Wisconsin, 3. These pupils are here, usually, expecting to teach in California, and all sign the condition made on entering.

MANUAL TRAINING.

During the year the different departments have worked harmoniously. I am glad to be able to report that the Industrial Department has become a marked success. Since the Board authorized the employment of a skilled mechanic to take charge of the work and give instruction, the interest has greatly increased, and the results are quite satisfactory. With so large a school it is impossible to give the manual training work to all pupils. Two Middle Classes and a part of a class from the Training Department have had much valuable training. The additional expense of the department is very small when compared with the desirable results attained.

In the Training Department proper, considerable attention has been given to instruction in clay modeling, as well as in needlework. To this work the pupils come as to an amusement, and it is therefore a respite from, rather than an addition to their study tasks. It also tends to the development of special talent—talent that in the near future may become valuable to society.

COURSE OF STUDY.

Referring to the changes made in terms and course of study, at the joint meeting of the Boards at Los Angeles, about a year ago, and the modifications made at the meeting at Chico, this year, I beg to report:

The year's trial of three terms a year, and only one set of classes, has but confirmed the opinion of the Faculty that it will be far better for this school to return to the plan of two terms a year, and also to the plan of carrying on two sets of classes. They believe the old plan best accommodates those who desire to avail themselves of the advantages of the school, and that it, also, enables the school to do better work for those who come. They therefore respectfully ask that the calendar, as now submitted, be adopted, and that the course of study, as herewith presented, be prescribed for this school. The calendar provides for two terms of twenty weeks each. The Course of Study, though changed somewhat in the order of succession of studies, is in general accord with the course as finally modified by the Boards in joint session at Chico.

CLOSING REMARKS.

It is well known to you, gentlemen, that for a portion of the year I have been unable to discharge the duties pertaining to my position. When I came to a full recognition of this fact, I asked for, and received, three months' leave of absence, without salary. During this period the duties of the principalship were satisfactorily discharged by the Vice-Principal, Professor Childs. I need hardly suggest that for this period he should receive the salary of Principal.

Being convinced that the best interests of the school, as well as my own interest, demanded that I should no longer hold a position the duties of which I was unable to perform, on the sixth day of April I addressed a communication to the Chairman of the Board of Trustees, asking that my resignation, which has for some time been at their disposal, should be accepted, to take effect at the close of the present school year.

In closing my connection with you, gentlemen, it will not be out of place if I refer briefly to our past work together.

On the first day of October, 1872, having been previously notified of my election to a position in the school, I reported to the Principal, Dr. Wm. T. Lucky, and was assigned to duty. On the fifth day of August, following, to my great surprise, I received official notice of my election as Principal of the school, and on the Tuesday morning following, assumed the duties of the position. I have, therefore, been connected with the school for nearly seventeen years, and have held the position of Principal for sixteen years.

During all this time my leading desire has been to build up and strengthen the school. To this work I have given whatever of ability I possess, and I can but be gratified at the results attained.

The work, although at times severe, has always been pleasant, and I can think of but two contingencies that would lead me willingly to give up a work that has claimed so much of my thought, and that I have so heartily enjoyed. One of these is an indication, upon your part, of a desire that the position should be vacated. But your continued support, your many warm expressions of good will, and your appreciation

of the work of the school, give me the assurance that you have neither felt nor indicated such a desire.

The other contingency is my own ill health. This, I am sure you will all understand, is imperative.

In returning to you the high trust which, years ago, you gave into my hands, I desire, in this formal manner, to express to you my thanks for your support and sympathy, and, I think I may add, your personal friendship. If the school has been a success, it is because you have ever given an intelligent support to all reasonable efforts to make it better, and because you have provided for and sustained all needed changes and improvements. The Faculty you have given me have been well selected, and they, too, have worked earnestly and faithfully to make the school what it should be. In the school and in its graduates I shall never lose my deep interest. May they go on achieving still greater good.

In conclusion, allow me to say to you, and, through you, to the Faculty, to the Alumni, and to the pupils yet remaining in the school, a *good bye* in its old time meaning, "God be with you."

I am, very respectfully, your obedient servant,

CHAS. H. ALLEN,
Principal.

SAN JOSÉ, June, 1889.

FINANCIAL REPORT

FINANCIAL REPORT—Continued.

Of the State Normal School, San José, Cal., for the Fortieth Fiscal Year, ending June 30, 1889

Date of Auditing.	No. of Voucher		Dr.	Cr.
1888.				
		Balance of appropriation from thirty-ninth fiscal year, as per last report	\$2 06	
		Balance in Tuition Fund from thirty-ninth fiscal year, as per last report	1,878 95	
		Amount of appropriation for fortieth fiscal year	39,000 00	
		Amount of tuition collected for fortieth fiscal year	3,480 50

PRINCIPAL'S REPORT.

To the Board of Trustees of the State Normal School at San José:

GENTLEMEN: I have the honor of submitting the following report of the school in San José under your charge, for the school year ending June 30, 1890:

On the thirty-first of January diplomas were granted to sixty-four pupils.

As no special time was taken to prepare for graduating exercises, the regular work of the school was continued up to the last day of the term.

The diplomas were conferred in a simple and business-like way that seemed to meet the approval of parents, teachers, and pupils.

We propose to graduate the June class in the same dignified and inexpensive manner.

We present now for diplomas a class of ninety-three. This is the largest class ever graduated from this school. The prominent features of this commencement will be class teaching in the Training Department by the Senior students, and an exhibit of work done in the various departments of Manual Training.

STATISTICS.

Two hundred and eighty-three applicants for admission to the school have been examined during the year. Of these, 81 failed to reach the required standard for admission, and 202 entered the school. One was admitted to the Senior Class, 6 to the Middle A, 4 to the Middle B, 9 to the Junior A, and 182 to the Junior B. We have admitted 62 pupils on Grammar School diplomas, 11 on High School diplomas, and 14 on teachers' certificates.

For the year, the enrollment has been, in the various classes: Senior, 192; Middle, 157; Junior, 243; Training Department, 263. The total enrollment in all classes, 855; in the Normal classes, 592; average for the year in Normal classes, 492. During the year there have been representatives in the school from forty-four counties in the State, distributed as follows:

County Representation, 1889-90.

Alameda.....	33	Mendocino.....	9
Alpine.....	1	Merced.....	5
Amador.....	5	Monterey.....	11
Butte.....	3	Napa.....	14
Calaveras.....	1	Nevada.....	5
Contra Costa.....	18	Placer.....	5
El Dorado.....	10	Sacramento.....	20
Fresno.....	12	San Benito.....	10
Humboldt.....	19	San Diego.....	3
Kern.....	3	San Francisco.....	83
Lake.....	4	San Joaquin.....	4
Lassen.....	1	San Luis Obispo.....	9
Los Angeles.....	2	San Mateo.....	3
Marin.....	7	Santa Clara.....	228
Mariposa.....	1	Santa Cruz.....	16

Shasta	3	Tehama
Sierra	5	Trinity
Siskiyou	5	Tulare
Solano	12	Tuolumne
Sonoma	9	Ventura
Stanislaus	4	Yolo
Sutter	5	Yuba

Counties not represented: Colusa, Del Norte, Inyo, Modoc, Mono, Orange, Plumas, San Bernardino, Santa Barbara.

In addition to those enrolled from California, we have from Idaho, 2; Kansas, 1; Michigan, 2; Minnesota, 1; Missouri, 1; Montana, 1; Nebraska, 1; Nevada, 6; Nova Scotia, 1; Oregon, 3; Washington, 7; Wisconsin, 2.

MUSEUM.

During the year, exchanges with various scientists have added much valuable material to the collections. The thanks of the State Normal School are due for donations from friends as follows: Hon. Leland Stanford; Rev. M. R. Gains; A. Tibbel; Dr. Putzeys, Belgium; M. Arturo Bofill, Spain; Flood Brothers, Massachusetts; C. H. Allen; J. R. Bush Wm. Bankhead; W. E. Curtis; M. J. Dennis; S. B. Elliott; K. McGeorge; H. M. Kennedy; Mrs. V. Gallut; Mrs. M. E. Nichols; Mr. Mitchell.

GENERAL.

The young men in our school have organized a cadet company for exercise and discipline. On application by your Executive Committee the Adjutant-General of this State has furnished us with guns and other necessary equipments. I recommend that a suitable place be prepared for storing these arms.

We are now using every part of the building, from basement to attic. We have been compelled to use the reception-room for library purposes and still the library-room is much too small. Some of the Training Department classes are using rooms in the basement that cannot be heated sufficiently. The basement is entirely unsuited for class purposes. It was originally intended for store-rooms, and might be converted into a gymnasium if we had other space for the Training Department. In view of the crowded condition of our school, I earnestly request you to ask the Legislature for an appropriation of \$60,000 with which to erect a building especially adapted to the use of a modern training school.

It is unnecessary to allude here to the special work of the school during the past year, as a full account of it appears in the catalogue.

During the year, an hour at the close of school work on Thursdays has been used for popular lectures. Many persons have discoursed upon a great variety of subjects. These talks have been very interesting and profitable to us, and we sincerely thank these friends for their work.

With thanks to you for your cordial support and valuable suggestions and to the Faculty for their very earnest and faithful labors, this report is respectfully submitted.

CHAS. W. CHILDS,
Principal

FINANCIAL REPORT

Of the State Normal School, San José, for the Forty-first Fiscal Year, ending June 30, 1890.

GENERAL FUND.

Date of Auditing.	No. of Voucher		Dr.	Cr.

STATE NORMAL SCHOOL AT LOS ANGELES.

REPORT OF TRUSTEES OF STATE NORMAL SCHOOL,
LOS ANGELES.

To his Excellency R. W. WATERMAN:

SIR: We herewith submit, for the State Normal School at Los Angeles under our charge, the financial report of the forty-first fiscal year, ending June 30, 1890, together with the report of the Principal of the school for the same year, as required by law.

In the gymnasium building account, the last item, Voucher No. 469, is drawn in the forty-second fiscal year, but is inserted here to show the complete disposal of the fund appropriated by the last Legislature for this purpose.

You will see, by glancing over the record, that we have kept carefully within the appropriations placed at our disposal.

Very respectfully submitted.

STEPHEN M. WHITE,
President of Trustees.

IRA MORE, Secretary.

FINANCIAL REPORT.

California State Normal School at Los Angeles, Forty-first Fiscal Year, ending June 30, 1890.

CURRENT EXPENSE FUND.

PRINCIPAL'S REPORT.

To the Board of Trustees of the State Normal School at Los Angeles:

GENTLEMEN: The work of the past year does not differ materially from that of the preceding years. The school is steadily increasing in numbers and improving in quality. In no part of the State has the improvement in the public schools been so rapid during the past few years as in Southern California; and the Normal School, while itself a factor in this development, receives the benefit of students much better prepared for its own course of study and discipline.

The good effects of but one admission and one graduation during the year are already shown in the increased constancy of attendance. Students do not take the Normal course as "catch-up work" to occupy their otherwise leisure time, but enter with a purpose of graduating. The only remaining Christmas class will go out this coming year, and then we shall have only the regular Junior, Middle, Senior, and Post Graduate Classes; one class on each year of the course.

The graduates of the past year are: a class of eighteen at Christmas, 1889; and a class of twenty-eight in June, 1890, making forty-six on the three years' course; also, in June, 1890, a class of four on the Post Graduate course, making fifty graduates for the year. For the benefit of those who are inclined to question if Normal graduates teach, and thus return to the State the equivalent of the special education they have received, we have kept a record of the work of our first class of twenty-two, which graduated in 1884, exactly six years ago, and find they have made an average of four and nine tenths years of teaching. This seems to make certain the fulfillment of the promise made from the platform when they received their diplomas. This class will teach ten years. Other classes are doing as well; and the coming years will, I doubt not, show the average work of the Normal graduate to be at least ten years.

The necessity of bodily training of students who are fitting for teachers has long been apparent. The Normal Schools work their students hard, and the temptation to spend the time out of school poring over books and notes, lest the next promotion should not be secured, or the subject and the premethod of presentation should not be thoroughly mastered for future teaching, uses up the precious hours and leaves no fraction of time for that exercise which alone develops the body and keeps it in a proper state of health. The best advice and suggestion produce but spasmodic reform. The teacher goes out fitted in mind but not in body, and the coming years of work must be sandwiched with frequent years of rest, or an early breakdown ends a promising career.

To meet this want of physical culture the last Legislature made an appropriation of \$10,000, in answer to a call of the Trustees of this school, for building and furnishing a gymnasium. With \$9,000 of this appropriation a handsome building has been erected and put in order for use. One thousand dollars' worth of apparatus is on the way from

the manufacturers, and the whole will be complete for use before September 2, 1890, when the school opens for the year. It is intended that each student shall practice in calisthenic or class gymnastic exercises under the careful supervision of a skilled instructor, for about the time of one recitation period each day. Only those whose judgment can be trusted will be allowed to practice gymnastic exercises without supervision, as much harm sometimes results from the over exertion of would-be gymnasts.

The building is so constructed that if at any time you should think it best to have the girls (for all Normal Schools are filled mainly with girls in these days) taught practically in the use of the fore-plane, adze, and hand-saw, the apparatus needs only to be replaced with work benches, lathes, and tools, and its design as a perfect manual training school will be apparent.

A separate building for a chemical and physical laboratory is much needed. This would give us extra class-room in the main building, now becoming crowded, and remove the chemistry to a place where the constant experimenting, made necessary by the practical teaching of to-day, should not be an "ill savor filling the nostrils of the people."

Very respectfully submitted.

IRA MORE,
Principal.

STATE NORMAL SCHOOL AT CHICO.

REPORT OF TRUSTEES OF STATE NORMAL SCHOOL, CHICO.

To his Excellency R. W. WATERMAN, Governor:

SIR: We herewith submit, for the State Normal School under our charge, the financial report for the forty-first fiscal year, ending June 30, 1890. In view of the demands incident to the organization of a school of this character, we trust you will find that the funds intrusted to us have been judiciously expended. By reference to the report of the Principal of the school, and to the annual catalogue, it will be seen that the first year's attendance was much larger than any one expected. To provide for this and for the natural growth of the school, an increase in the number of teachers in the Normal Department will be required next year, which, together with the expense attending the establishment of the Training and Model School, will necessitate a very careful handling of the remainder of the appropriation of \$27,000.

Good work has been done by the school, and, because of its influence, a new interest is already being felt in the cause of common school education in this part of the State.

For the two fiscal years—forty-third and forty-fourth—to enable the school to do the best work, the following appropriations will be required:

For current expenses	\$42,000 00
For library	5,000 00
For museum and apparatus	3,000 00

This, at first thought, may seem too large, but we must include under current expenses, not only those of the Normal Department and the Training School, but also the care of the grounds, which consist of eight acres. An extra library appropriation is asked for the next two years, because with the same course of study we are expected to do the same work as is done in the other Normal Schools of the State. This is impossible, while we have only one tenth of the supply of books and apparatus. We have, as yet, been able to spend nothing on the museum, and we have a very limited amount of the apparatus necessary in the scientific department of the school; therefore, we ask for the above amount to help us in making a beginning. After a foundation is laid there will only be required an amount proportional to that received by the older schools.

Very respectfully submitted.

F. C. LUSK,
President of Trustees.

EDW. T. PIERCE, Secretary.

AUGUST 15, 1890.

FINANCIAL REPORT

Of the California State Normal School at Chico, for the Forty-first Fiscal Year, ending June 30, 1890.

CURRENT EXPENSE ACCOUNT.

Date of Auditing.	No. of Voucher		Dr.	Cr.
1889.		To appropriation for current year	\$13,500 00

PRINCIPAL'S REPORT.

To the Board of Trustees of the California State Normal School at Chico:

GENTLEMEN: The first year of the State Normal School under your charge has just closed. The opening of the school marks an epoch in the educational history of this part of our State. The large number of students who have availed themselves of its advantages indicates the wisdom of the legislators in locating north of Sacramento a professional school for teachers. With a Normal School at San José, near the central part of the State from north to south, and one at Los Angeles in the southern part, a similar institution for Northern California was an imperative necessity if the schools of this immense region were to keep pace with the educational progress evinced in other parts of our great commonwealth.

One hundred and ten students have been in attendance during the year, and these students have represented the following counties: Modoc, Lassen, Plumas, Siskiyou, Shasta, Tehama, Butte, Colusa, Yuba, Calaveras, Nevada, Sonoma, Lake, Solano, Sacramento, San Joaquin, and El Dorado.

The many inquiries in regard to the school indicate that there will be a reasonable increase in numbers at the beginning of the second year. Believing it wise to lay a firm foundation for the future well-being and success of the school, the Faculty have been careful to admit only those who are fairly well prepared to do the work with credit. This has been thought better even at the beginning, as the real success of a Normal School is shown not in the number of students on the roll, but in the character of the work done, and in the fitness of its graduates for the responsible work of teaching.

The first class will graduate one year from now, and the energy and enthusiasm with which its members have performed the duties required of them, indicate that they will be well prepared to take charge of schools and do good work.

At the opening of the school in September the Training and Model Departments will be organized. I hope to put into practice in that part of the Normal School certain plans which will, I believe, add much to the institution as a professional training school for teachers.

Two more teachers will be required in the Normal Department of the school, and two teachers who are especially prepared to oversee and properly direct the work in the Training School will be needed in that department.

General plans for the school during the coming year have been given in my report in the annual catalogue, and, therefore, need not be repeated here.

As you are aware, many difficulties have presented themselves during this first year of the school. The unfinished state of the building has been an especial annoyance, while our library and apparatus have been insufficient for the needs of the classes. I trust that the next Legisla-

ture, realizing the importance of this school to the well being of the State, will appropriate enough money to finish the building and give our library and the scientific departments a proper nucleus of books and appliances for future growth.

In conclusion, I thank you most heartily, gentlemen of the Board, for the support you have given me during this trying period of organization, and for the uniform kindness and courtesy you have shown me at all times. You have patiently listened to my many requests and have done everything in your power to further the success of the school. The people of the State owe you a debt of gratitude for the time and attention which you have shown to their interests in the work of building and organizing this public institution.

With an abiding faith in the continued success of the school, and a renewed zeal for the work of the coming year,

I am, most respectfully,

EDW. T. PIERCE,
Principal.

AUGUST 15, 1890.

BIENNIAL REPORT

OF THE

BOARD OF STATE HARBOR COMMISSIONERS

FOR THE TWO FISCAL YEARS

COMMENCING JULY 1, 1888, AND ENDING JUNE 30, 1890.

SACRAMENTO:

STATE OFFICE, : : : : : J. D. YOUNG, SUPT. STATE PRINTING.
1890.

REPORT.

To Hon. R. W. WATERMAN, Governor of the State of California:

Pursuant to Sections 332 and 2537 of the Political Code, the Board of State Harbor Commissioners, having control of the waterfront of the city and county of San Francisco, submits this report of its transactions from the thirtieth day of June, 1888, to the first day of July, 1890, showing a full report of all moneys by it received and disbursed, and stating specifically the sources of such receipts, and the purposes for which the disbursements were made, accompanied with a description of the improvements made, and a statement of the condition of the property under its charge.

The details of the receipts and disbursements appear in the tabular statements annexed hereto—the following is a summary of them:

RECEIPTS.	1888-9.	1889-90.	Total.
From dockage	\$218,666 10	\$207,714 50	\$426,380 60
From tolls	221,860 14	195,384 32	417,244 46
From wharfage	7,489 14	10,903 08	18,392 22
From rents of wharves and seawall lots, and specialdock privileges, including reserving of berths.	165,325 80	176,403 10	341,728 90
From sale of old material	3,047 76	3,512 81	6,560 57
From dredging	160 00	920 00	1,080 00
From Fishermen's Wharf (exclusive of rents)	2,558 00	3,578 85	6,136 85
From miscellaneous (damages to property, etc.)	430 60	688 92	1,119 52
Total receipts	\$619,537 54	\$599,105 58	\$1,218,643 12
Amount drawn from San Francisco Harbor Improvement Fund	247,137 61	311,633 96	558,771 57
Totals	\$866,675 15	\$910,739 54	\$1,777,414 69
DISBURSEMENTS.	1888-9.	1889-90.	Total.
Salaries of Commissioners, Secretaries, Engineers, Draughtsmen, Attorney, Wharfingers, Collectors, Watchmen, and clerks in Secretary's office	\$104,914 65	\$90,647 45	\$195,562 10
Construction, including building of new wharves, sheds, sewers, and roadways, maintenance and repairs of outer half of waterfront streets, old wharves, buildings, roadways, and seawall	231,353 84	301,063 18	532,417 02
Wharf cleaning	15,812 60	16,177 58	31,990 18
Dredging	62,424 96	51,588 91	114,013 87
Seawall construction	99,765 47	97,632 20	197,397 67
Filling in and improving seawall lots	1,820 77	17,787 28	19,608 05
Fire account	4,941 55	4,988 65	9,930 20
General expenses, including office rent, fuel, stationery, printing, legal expenses, lighting wharves, overpaid revenue returned, and other incidental expenses	24,086 19	24,706 09	48,792 28
Total disbursements	\$545,070 08	\$604,591 34	\$1,149,661 37
Amount remitted to State Treasurer	321,605 12	306,148 20	627,753 32
Totals	\$866,675 15	\$910,739 54	\$1,777,414 69

From which summary it appears that there was received during the last two fiscal years the sum of \$1,218,643 12, and expended \$1,149,-

661 37, showing an increase in the amount in the San Francisco Harbor Improvement Fund from \$203,555 37, the amount therein at the close of the last report, to \$272,537 12, a gain of \$68,981 75.

The following shows the condition of the San Francisco Harbor Improvement Fund:

Amount in fund July 1, 1888.....	\$203,555 37
Amount remitted to June 30, 1890.....	627,753 32
	<hr/> \$831,308 69
Amount drawn out to June 30, 1890.....	\$558,771 57
Amount in fund July 1, 1890.....	272,537 12
	<hr/> \$831,308 69

Construction account has been segregated under two heads:

First—Seawall, and the structures appertaining thereto, and the roadway connected therewith.

Second—All other contract work.

SEAWALL.

Section 7. The contract for the construction of Section 7 of the seawall was awarded to J. S. Tibbals on the twelfth day of May, 1887, he being the lowest bidder. He did not commence the work promptly, and failed to prosecute it as vigorously as he should, and so but little progress was made when his death occurred, in February, 1888. The contract did not provide how much work should be done each month, the only limitation being that it should be completed within one year; but the Board, in making payments for what work was done, retained 25 per cent of the estimated value of the material used and work performed. Owing to the death of Mr. Tibbals, work was stopped until May 19, 1888, when a sale of the contract was made by his estate to J. S. Antonelle and George D. Nagle, with the approval of the Superior Court. On July 23, 1888, Messrs. Antonelle & Nagle assigned their interest in the contract to the San Francisco Contracting Company, who undertook the completion of the work, and completed the wharf and brought the embankments to grade on May 31, 1889. The embankments were there maintained for a period of three months, when the work was accepted and final payments made.

There was paid for this work as follows:

Stone, 91,307 $\frac{1}{2}$ tons, at 68 cents per ton of 2,240 pounds.....	\$62,088 95
Earth, 74,217 $\frac{1}{10}$ cubic yards, at 33 $\frac{1}{2}$ cents per cubic yard.....	24,739 04
Wharf.....	22,500 00
Total cost.....	<hr/> \$109,327 99

Of this amount, \$6,918 28 was paid prior to the date of the last report (June 30, 1888), and the balance, \$102,409 71, was paid since.

The estimates for the stone and earth for this section were based upon the amounts used in the construction of Sections 5 and 6, and they were in excess of the actual amounts used: Stone, 18 $\frac{1}{10}$ per cent; and earth 16 $\frac{5}{10}$ per cent.

The construction of this section made necessary the removal of a portion of the Jackson and Washington-Street Wharves and the construction of temporary roadways. A contract was awarded for this work

prior to June 30, 1888, but payment was made since. Contract price, \$2,500.

Section 8 (b). On the twenty-third day of October, 1888, the Board met to award a contract for the construction of Section 8 (b) of the seawall. Twelve bids were received, as follows:

NAME OF BIDDER.	Timber Foundation.	Concrete— per Cubic Yard.	Sand— per Cubic Yard.	Stone— per Ton.	Total.
John W. Ferris.....	\$60,165 60	\$13 83 $\frac{1}{2}$	\$0 60	\$1 20	\$131,366 40
M. J. Kelly and John Hackett.....	72,000 00	24 00	50	99	164,978 00
B. McMahon & Son.....	72,643 00	14 50	42	1 07	135,987 00
San Francisco Contracting Co.....	49,092 00	24 75	60	80	148,877 00
Rudolf Axman & Co.....	51,318 00	17 00	70	85	135,488 00
Hoffman & Bates.....	78,742 00	14 62	35	82	138,220 00
Pacific Bridge Co.....	41,610 00	24 00	57	1 00	138,260 00
American Bridge and Building Co.....	57,000 00	20 00	40	75	133,450 00
John Kelso.....	70,000 00	16 00	40	1 00	136,200 00
George D. Nagle.....	71,000 00	10 00	50	1 50	126,000 00
San Francisco Bridge Co.....	62,920 00	15 00	45	98	128,976 00
J. S. Antonelle.....	63,288 00	11 90	40	1 15	118,688 00

The contract was thereupon awarded to J. S. Antonelle, he being the lowest bidder.

This section is located at the foot of Market Street, and as the construction of a large building, arranged for the rapid and convenient handling of passengers, baggage, mail, express, and freight, is contemplated at this point, it was considered necessary, in order to secure a proper foundation for such building, to substitute a concrete wall for the stone embankment used in the sections previously built. The specifications for this work provided for the construction of the concrete wall by the use of coffer dams, but the contractor, after several ineffectual efforts to construct a coffer dam, made application to the Board to be allowed to perform the work with caissons. To this the Board agreed, with the stipulation that there should be deducted from the contract price the sum of \$5,027 04, the estimated difference in the cost of the two methods.

The contractor has performed work amounting to \$92,869 37, 75 per cent of which, \$69,652 04, has been paid, in accordance with the terms of the contract, the remaining 25 per cent to be paid upon the final completion and acceptance of the work.

A contract was awarded for the removal of the structures in the area to be occupied by this section, by which the contractor agreed to perform the work, and in addition pay to the Board \$762, all the wharf material removed to become his property.

COST OF THE SEAWALL.

The cost of constructing the several sections of the seawall and thoroughfare is as follows:

Section A, 561 feet long, \$152 61 per linear foot.....	\$85,614 53
Section 1, 1,000 feet long, \$165 63 per linear foot.....	165,631 40
Section 2, 1,000 feet long, \$167 50 per linear foot.....	167,504 09
Section 3, 1,000 feet long, \$235 50 per linear foot.....	235,049 51
Section 4, 1,000 feet long, \$240 87 per linear foot.....	240,872 01
Section 5, 1,000 feet long, \$189 89 per linear foot.....	189,893 57
Section 6, 800 feet long, \$158 47 per linear foot.....	126,779 73
Section 7, 1,000 feet long, \$109 32 per linear foot.....	109,327 99

Total cost of 7,361 feet (average cost per linear foot, \$176 70).. \$1,300,672 85

The marked decrease in the cost of Section 7 of the seawall is due to the fact that less material was used in the construction thereof, the old seawall projecting into the area to be occupied by this section.

PAVING SEAWALL ROADWAY AND STREETS, ADJACENT THERETO.

The acquisition of the seawall lots necessitated the improvement by the Board of the streets upon which such property fronts, and the following contracts were let for paving portions of such streets and the seawall roadway since July 1, 1888:

On the twentieth day of August, 1889, a contract was entered into with J. W. McDonald to pave with basalt blocks portions of Drum Street, Broadway, and the seawall thoroughfare. The contract price for such work was \$5,989, but additional paving ordered by the Board increased the price to \$6,982 47, from which was deducted \$81 45 for granite and wooden curbing not required, leaving the amount paid \$6,901 02. The work done under this contract consisted of twenty-six thousand seven hundred and sixty-two square feet of basalt block paving, four hundred and sixty linear feet of granite curbing, three hundred and forty linear feet of wooden curbing, and two cesspools.

A contract was entered into with F. H. Pitman on the twenty-first day of October, 1889, to pave with basalt blocks portions of Bay, Battery, and Davis Streets, and of the seawall thoroughfare. The following work was done:

WORK DONE.	Contract Price.	Amount.
96,741 square feet paving.....	\$0 22½	\$21,766 7½
1,795½ linear feet stone curbing.....	1 08	1,839 1½
2,083 linear feet wooden curbing.....	18	374 94
4 cesspools.....	120 00	480 00
5 drains.....	70 00	350 00
		\$24,910 84
9,970 square feet additional paving, at 21 cents.....		2,063 70
		\$27,004 54

A contract for paving portions of Broadway, Vallejo Street, and of the seawall thoroughfare, was entered into with John Hackett and John Sherry on the twenty-fifth day of November, 1889, and the following work was performed thereunder:

WORK DONE.	Contract Price.	Amount.
23,057 square feet paving.....	\$0 21	\$4,841 97
636 linear feet stone curbing.....	1 08	686 88
182 linear feet wooden curbing.....	20	36 40
2 angular corners.....	60 00	120 00
		\$5,685 25

By reference to the contracts for paving, in the financial statements in this and previous reports, it will be seen that the paved roadway extends from Section 1 of the seawall to the end of Sub-section 8 (B) a distance of six thousand six hundred and fifty feet, or one and one

quarter miles. Throughout this distance the roadway is paved with basalt blocks for a width of forty feet.

Proper entrances into the city's streets are provided as fast as the city authorities prepare their portions.

By the continued neglect of the city authorities to properly build and maintain that portion of the waterfront streets legally under their jurisdiction, the Board has been at times compelled to perform this work or subject the commerce of the port to delay and inconvenience.

REPIILING SEAWALL WHARF.

A contract was entered into with the San Francisco Bridge Company prior to, but no payment had been made thereon at the date of the last report, for repiling the wharf along Sections 1, 2, 3, and 4 of the seawall. The following work has been performed and paid for since:

Furnishing, driving, and fastening 1,077 piles at the contract price of \$12 87 per pile.....	\$13,860 99
Furnishing, fitting, and fastening 11,970 feet (B. M.) chocks at contract price of \$32 50 per M. feet.....	389 02
Putting in compound stringers, rebolting and refastening piles, etc.	147 00
	\$14,397 01
Less deduction—cost of repairing gutter.....	36 00
	\$14,361 01

CONSTRUCTION ACCOUNT.

This account embraces all contract work not relating directly to the seawall.

It is classed under three heads:

First—Work contracted for prior to and completed since June 30, 1888.

Second—Work contracted for and completed since June 30, 1888.

Third—Work contracted for but not completed June 30, 1890.

There is a marked difference in contract prices for repiling the various wharves; the wharves covered by sheds being more expensive to repile, as a greater length of time is necessary in which to do the work, and the contractor is required to repair the roofs of the sheds necessarily damaged by the piling.

First.

Pier to project from Stewart Street at foot of Harrison Street. Average length, 548½ feet, with a width of 80 feet. Date of contract, October 25, 1887. American Bridge and Building Company, contractor.

Contract price.....	\$32,833 00
Extras—2 brace piles and extra length on 72 fender piles.....	173 44
	\$33,006 44
Less deduction for omission of 12 cluster piles.....	192 00
	\$32,814 44

Of this amount, \$19,699 80 was paid prior to last report, and the balance, \$13,114 64, was paid since.

Pier and shed thereon, near the foot of Lombard Street; size of pier, 545 feet by 100 feet; size of shed, 520 feet by 90 feet. Date of contract, October 25, 1887. B. McMahon & Son, contractors.

Contract price.....	\$36,750 00
Extras on account of change of location:	
17 extra piles.....	\$321 47
Extra length on 1,070 piles.....	1,400 91
Extra lumber, 8,890 feet.....	217 56
	<u>1,939 94</u>
	\$38,689 94

Of this amount, \$25,193 25 was paid prior to last report; the balance, \$13,496 69, was paid since.

Repiling Washington-Street Pier (this pier is covered with a shed).
Date of contract, March 20, 1888. B. McMahon & Son, contractors.

Furnishing, driving, and fastening 333 piles, at contract price of \$21 25 per pile.....	\$7,076 25
Furnishing, fitting, and fastening 18,208 feet (B. M.) lumber, at contract price of \$37 50 per M. feet.....	682 80
	<u>\$7,759 05</u>

Repiling Berry-Street Pier. Date of contract, May 24, 1888. American Bridge and Building Company, contractor.

Furnishing, driving, and fastening 271 piles, at contract price of \$13 45 per pile.....	\$3,644 96
--	------------

Second.

Paving portion of East Street, between Market and Howard Streets, with basalt blocks. Date of contract, September 24, 1888. J. W. McDonald, contractor.

Contract price.....	\$9,199 00
Extra filling, 2,976 cubic yards.....	892 50
	<u>\$10,091 50</u>

Rebuilding south side and east end of Union-Street Wharf. Date of contract, October 29, 1888. B. McMahon & Son, contractors.

Furnishing, driving, and fastening 400 piles, at contract price of \$12 25 per pile.....	\$4,900 00
Furnishing, fitting, and fastening 29,918 feet (B. M.) lumber, at contract price of \$23 per M. feet.....	688 11
	<u>\$5,588 11</u>

Rebuilding north side and east end of Green-Street Wharf. Date of contract, October 29, 1888. B. McMahon & Son, contractors.

Furnishing, driving, and fastening 478 piles, at contract price of \$12 10 per pile.....	\$5,783 80
Furnishing, fitting, and fastening 27,787 feet (B. M.) lumber, at contract price of \$23 per M. feet.....	639 10
	<u>\$6,422 90</u>

Pier to project from Brannan Street near the foot of Fremont Street. Average length, 702½ feet, with a width of 100 feet, and an approach having an average length of 194 feet, and a width of 70 feet. Date of contract, January 15, 1889. San Francisco Contracting Company, contractor.

Contract price.....	\$32,723 00
Less deduction—allowance for coating on 16 fender piles.....	262 50
	<u>\$32,460 50</u>

Coating piles with "Key West Pile Armor." Date of contract, January 15, 1889. M. Connell, contractor.

Coating 53,605 linear feet of piling, at contract price of 35 cents per foot.....	\$18,761 75
---	-------------

Apron and slip to project from Section 7, seawall, between Jackson and Washington-Street Piers. Date of contract, April 15, 1889. B. McMahon & Son, contractors.

Contract price.....	\$2,500 00
Addition to contract:	
Forty-four piles, at \$26 88.....	\$1,182 72
Nine piles, at \$22 75.....	204 75
Apron, as per agreement.....	675 00
Four men and driver, one half day.....	18 00
	<u>2,080 47</u>
	\$4,580 47

Three connecting wharves in Brannan Street, 118½ feet by 74 feet, 100 feet by 74 feet, and 85 feet by 72 feet, and replanking portions of adjacent structures. Date of contract, May 8, 1889. B. McMahon & Son, contractors.

Contract price.....	\$9,100 00
One hundred additional piles, at \$11 50 per pile.....	1,150 00
	<u>\$10,250 00</u>

Repiling and repairing Broadway Wharf No. 2 (this wharf is covered with a shed). Date of contract, May 23, 1889. San Francisco Bridge Company, contractor.

Furnishing, driving, and fastening 40 standard piles, at contract price of \$18 53 per pile.....	\$741 20
Furnishing, driving, and fastening 118 fender piles, at contract price of \$17 03 per pile.....	2,009 54
Furnishing, driving, and fastening 30 brace piles, at contract price of \$22 74 per pile.....	682 20
Furnishing, fitting, and fastening 4,976 feet (B. M.) lumber, at contract price of \$30 90 per M. feet.....	153 76
	<u>\$3,586 70</u>

Two office buildings on wharf of Section 7 of seawall, opposite Washington-Street Pier—each 32 feet long, 19 feet wide, with 12 feet height of story. Date of contract, July 10, 1889. Peter Ahern, contractor.

Contract price.....	\$1,479 00
Extras, change in plans, etc.	105 00
	<u>\$1,584 00</u>

Coating piles with "Key West Pile Armor," also called "Vulcan Pile Armour." Date of contract, August 6, 1889. M. Connell, contractor.

Thirty-five thousand and seventy-five linear feet of piles coated at contract price, at 40 cents per foot.....	\$14,029 92
Extra—coating 900 linear feet of 16-inch piles, at 10 cents per foot, extra.....	90 00
	<u>\$14,119 92</u>

Repiling Folsom-Street Pier No. 1 (this pier is covered with a shed). Date of contract, August 15, 1889. B. McMahon & Son, contractors.

Furnishing, driving, and fastening 269 piles, at contract price of \$25 96 per pile.....	\$6,983 24
Furnishing, fitting, and fastening 943 feet (B. M.) lumber, at contract price of \$36 per M. feet.....	33 95
	<hr/>
Less deduction—allowance for 75 feet coating on 5 piles, at 40 cents per foot.....	30 00
	<hr/>
	\$6,987 19

Repiling and repairing Folsom-Street Pier No. 2. Date of contract, August 16, 1889. San Francisco Bridge Company, contractor.

Furnishing, driving, and fastening 98 piles, at contract price of \$18 49 per pile.....	\$1,812 02
Furnishing, fitting, and fastening 3,556 feet (B. M.) lumber, at contract price of \$30 per M. feet.....	106 68
Three hundred and sixty-one feet extra planking and curbing....	7 94
	<hr/>
	\$1,926 64

Rebuilding sides of Mission-Street Pier No. 1. Date of contract, March 17, 1890. San Francisco Bridge Company, contractor.

Furnishing, driving, and fastening 182 fender piles, at contract price of \$12 per pile.....	\$2,184 00
Furnishing, driving, and fastening 148 brace piles, at contract price of \$17 per pile.....	2,516 00
Furnishing, fitting, and fastening 73,333 feet (B. M.) lumber, at contract price of \$25 per M. feet.....	1,833 33
	<hr/>
	\$6,533 33

Repiling and repairing Green-Street Pier. Date of contract, April 5, 1890. B. McMahon & Son, contractors.

Furnishing, driving, and fastening 126 piles, at contract price of \$13 50 per pile.....	\$1,701 00
Furnishing, fitting, and fastening 240 feet (B. M.) lumber, at contract price of \$22 50 per M. feet.....	5 40
	<hr/>
	\$1,706 40

Repiling and repairing Vallejo-Street Pier. Date of contract, April 17, 1890. Darby Laydon, contractor.

Furnishing, driving, and fastening 115 piles, at contract price of \$13 37 per pile.....	\$1,537 55
Furnishing, fitting, and fastening 21,618 feet (B. M.) lumber, at contract price of \$23 75 per M. feet.....	513 43
Extra—furnishing, driving, and fastening 39 brace piles, at \$17 per pile.....	663 00
	<hr/>
	\$2,713 98

Repiling and repairing Howard-Street Pier No. 3. Date of contract, April 21, 1890. Darby Laydon, contractor.

Furnishing, driving, and fastening 84 piles, at contract price of \$14 87 per pile.....	1,249 08
Furnishing, fitting, and fastening 3,914 feet (B. M.) lumber, at contract price of \$26 75 per M. feet.....	104 70
	<hr/>
	\$1,353 78

Float and gang plank for boat landing between Howard-Street Pier No. 3 and Folsom-Street Pier No. 1. Date of contract, April 24, 1890. Alexander Hay, contractor.

Contract price.....	\$1,390 00
---------------------	------------

Paving portion of East Street, between Market and Mission Streets, with basalt blocks. Date of contract, June 5, 1890. J. W. McDonald, contractor.

Contract price.....	\$1,491 00
---------------------	------------

Third.

Rebuilding Ferry Slip No. 1 and Clay-Street Pier. Date of contract, August 27, 1889. B. McMahon & Son, contractors.

Contract price.....	\$26,250 00
Amount paid on account.....	19,895 62

Shed on Clay-Street Pier. Length, 360 feet, with a width of 76 feet for 200 feet, and of 46 feet for 160 feet. Date of contract, March 10, 1890. B. McMahon & Son, contractors.

Contract price.....	\$5,370 00
Amount paid on account.....	2,819 25

DREDGING.

The greater depth of water necessary to accommodate the increased draft of larger vessels coming to this port, and the crowded slips interfering with the full movement of the dredgers, caused the number of yards dredged during the last two fiscal years to be smaller than the amount usually dredged.

During the fiscal year ending June 30, 1889, the cost of repairs to the plant was heavy, thereby increasing the total expenditures for this department to \$62,424 96, while the number of yards dredged (five hundred and thirty-six thousand eight hundred) was far less than in preceding years, and was mainly owing to the prolonged and difficult dredging for the seawall, being a crowded and narrow space through several wharves filled with stumps, stones, and various other obstructions.

This increase in the expenditures, and decrease in the number of yards dredged, increased the cost of dredging to \$11 62 per cubic yard.

During the fiscal year ending June 30, 1890, there were dredged six hundred and forty-five thousand three hundred cubic yards, at a cost of \$51,588 91, or \$7 99 per cubic yard, which is about the average cost.

The details of the work done, and expenditures made by this department, will be found in the tabulated statement on page 25.

No additions have been made to the plant for several years, but it will be necessary to add to and replace much of it at an early day.

PILE DRIVING.

The Board now owns two pile-drivers (one scow and one top driver), which have been operated to their full capacity since their construction.

OUTSTANDING LEASES.

The only unexpired lease of waterfront property is that of the Pacific Mail Steamship Company, which yields a monthly rental of \$1,250, and which will expire January 6, 1892.

PRESERVATION OF PILES.

The Board has not yet felt justified in incurring the expense of a costly creosoting plant without further experiments. To this end, various preparations of asphaltum, limestone, canvas, burlap, ship felt, etc., have been thoroughly experimented with. Whilst the time is too short to determine the absolute value of these trials, it is certain that a wide range of experience has been had, valuable in guiding to the final solution of this vital problem. Two carloads of thoroughly creosoted piles have been secured from the San Pedro works, and driven in the most exposed portions of the front. The engineer of the Board has carefully examined the most recently built creosoting plants on this and the Atlantic Coast, and reports of their operations are on file.

REROOFING AND REPAINTING SHEDS.

The Board has under its jurisdiction some twenty acres of sheds. The oldest of these have been reshingled, and the roofs and sides given two coats of paint. Since the date of the last report, the sheds on Washington and Jackson-Street Piers have been reshingled and painted, and the inside whitewashed. The grain sheds, and the sheds on Broadway Nos. 1 and 2, and Mission and Folsom-Street Piers, have been repaired and repainted, as well as minor structures. The outlay thus incurred is justified by the greater protection to merchandise, and by the greater durability and improved appearance of the waterfront property.

EXAMINATION OF BOOKS AND ACCOUNTS.

Believing that the accounts of all public officers, particularly of those who are charged with the receiving and disbursement of public funds, should be often and thoroughly examined, the Board has on several occasions during the last two years employed Mr. Julian B. Harries, a competent and experienced accountant, to examine the books, vouchers, and accounts of this office. Mr. Harries has submitted three reports of his investigations, covering the period from March 26, 1883, to the thirtieth day of June, 1890, all of which are on file. The Board submits herewith a copy of his last report, omitting the other two on account of their length:

320 SANSOME STREET, ROOM 19,
SAN FRANCISCO, September 20, 1890.

To the honorable State Harbor Commissioners, San Francisco:

GENTLEMEN: Since the date of my last report, March 24, 1890, I have examined the books and accounts of the department up to June 30, 1890, and beyond one or two trifling omissions since rectified, I find everything correct.

My examinations, as you are aware, antedate the biennial report just drafted, as well as the preceding one; therefore, I am in a position to speak from actual facts and figures. The department in its march of improvement has now come down to good systematic work, keeping always in view the doubt check principle; and as a meed of merited praise to the employés, I would add that I consider your books and accounts would compare favorably with any other governmental department.

On the seventeenth instant, I addressed a letter to State Controller John P. Dunn, Esq., asking what balance stood to the credit of the San Francisco Harbor Improvement Fund on June 30, 1890; also what drafts remained unpaid up to and inclusive of No. 343 (the last that was drawn in June). Inclosed herewith I send you the State Controller's reply wherein he states that, according to his books, the account stood as follows:

June 30, 1890—Balance on hand to credit of San Francisco Harbor Improvement Fund	\$267,630 52
Deduct drafts drawn and not presented, Nos. 335, 336, 340, 341, 342, and 343....	14,374 29
	\$253,256 23
Add balance of June cash remitted to State Controller, as per his receipt....	19,280 98
	\$272,537 16

This sum is 4 cents in excess of your ledger balance.

With regard to the biennial report, now ready for the printer's hands, I would state that I have gone over all the receipts, disbursements, drafts drawn, and other figures connected therewith, and find them strictly correct.

Hoping that the present satisfactory working of your department will be ever maintained, I have the honor to be, gentlemen,

Your obedient servant,

JULIAN B. HARRIES,
Accountant.

CHANGE IN THE SYSTEM OF COLLECTING TOLLS.

On September 26, 1889, the Board passed an order that very materially changed the system of collecting tolls, to take effect on November 1, 1889, prior to which time tolls were paid on merchandise as it passed over the various wharves by teamsters, consignees, owners, and others. The system was an expensive one, as it required a Collector to be stationed at each wharf, each Collector receiving a monthly salary of \$100, fixed by law. The term for which Collectors are appointed, also fixed by law, is four years, and the Board doubted its power to remove a Collector before the expiration of his term, which would not occur before 1891.

By the change in the manner of collecting tolls the Board would be able to dispense with the services of twenty Collectors, thereby decreasing the expense of collecting tolls \$2,000 per month. But, unless the Board had the power to remove a Collector prior to the expiration of his term of office, there would be nothing gained by the contemplated change of system; on the contrary, there would be a decided loss. Therefore, on July 16, 1889, the Board removed a Collector named Ford, and tendered him his salary earned at the date of removal. Ford demanded his salary for the full month, and denied the power of the Board to remove him, and brought an action in the Supreme Court of the State to compel the Board to pay him the sum of \$30, as and for a balance due him on account of his salary as Collector for the month ending July 25, 1890. This brought the question as to the power of the Board in the premises fairly before the Supreme Court of the State. The case was argued by Hon. Jas. G. Maguire, on behalf of the Collector, and by Hon. W. W. Morrow and T. C. Coogan, Esq., on behalf of the Board, and on October 1, 1889, the Court rendered its decision, fully sustaining the position taken by the Board. (The case will be found reported in the 81 Cal. Reports, pages 19 to 37.)

By this system of collecting tolls the owner, agent, manager, consignee, master, or person in command of any vessel must, at the time of her arrival at a wharf, if she has a cargo to discharge, and before her departure, if she has taken a cargo on board, deliver to the Collector at the wharf a full and correct statement of all merchandise to be discharged from or that has been received on board such vessel, and must pay to the Collector the tolls due thereon according to the schedule of rates fixed by the Board.

As soon after the first of November, 1889, as the business of the wharves would permit, the Board removed nineteen more Collectors making twenty in all, and thereby reduced the expenses of collecting tolls \$2,000 per month.

After a practical working of the system for the last eight months the Board is satisfied that the change has proved to be a judicious one, for although the revenue collected from tolls during that period is less than during the corresponding period under the former system, yet it is fully accounted for by the fact that on November 21, 1889, the Board abolished all tolls on grain, flour, and mill stuffs passing over the wharves under its jurisdiction, the order taking effect on December 1, 1889, and thereby very materially reducing the revenue from tolls.

PASSENGER DEPOT AND BELT RAILROAD.

Seawall and Passenger Depot at Foot of Market Street.

Sub-section 8 (a) will extend from the center line of Clay Street to the north end of Sub-section 8 (b) already built, and will complete the seawall across the important space fronting the passenger ferry slips at the foot of Market Street. This sub-section is about four hundred feet long, and will cost about \$120,000. It is the purpose of the Board to let this section, as soon as it can be done without subjecting the public to the great inconvenience of the change during the rainy season.

The seawall as thus built will serve as the foundation for the west front of a large passenger depot, designed to be about eight hundred feet long and one hundred and fifty feet wide. The east front will rest upon heavy concrete piers about forty feet apart, and costing in the aggregate some \$42,000.

This building is designed to accommodate the passenger traffic reaching the foot of Market Street. It will be two stories high, with a central portion one story higher. The second story will be reached by a steel bridge over East Street, and extending to the south side of Sacramento Street, and connected directly with the upper decks of steamers. The principal materials of construction will be iron, steel, and glass. It is estimated, with the bridge and approaches, to cost about \$504,000.

Upon the commencement of Sub-section 8 (a), it will be necessary to commence the condemnation of a small triangle at the intersection of East and Sacramento Streets. In this connection it is proper to call attention to the fact that no authorization exists for the acquisition of the necessary space for the abutment and steps for the west end of the overhead steel bridge above mentioned, and to the necessity for the enactment of suitable laws giving the Board this power.

Since the laws creating the Board and defining its duties and responsibilities were passed, additional duties have been imposed. The concentration of a vast local and transcontinental passenger traffic at the foot of Market Street, and the need of building a belt railroad around the State's waterfront properties, have imposed obligations upon the Board beyond the limits of their present revenues. There can be no doubt of the advantages to the State at large of the past policy of the Board regarding the absolute ownership and control by the State of all the waterfront property, and the structures thereon. No person nor corporation should own any structure whatever upon the State property

nor should such structure, when built by the State, be under the exclusive control of any person or corporation.

And, although the time is at hand when the public need for suitable passenger accommodations at the foot of Market Street is great, and our commercial necessities demand the most complete facilities for rapid handling of freights, no step should be taken which would in any way tend to impair the absolute control by the State of the vast interests of the waterfront. The direct revenues of the Board are sufficient, when wisely expended, for the maintenance and extension of the waterfront and seawall, as originally provided for by law, but not for meeting the additional burdens above mentioned. It is believed that these burdens may be borne without the addition of one dollar of taxation upon the citizens of the State.

The State has now reclaimed from the bay, by the construction of the seawall already built, thirty and one half fifty-vara lots (in a former report this area has been given as thirty-three and one third fifty-vara lots; but since that report, Lot No. 4 has been decided by the Courts to be partly owned by private parties). These are worth at least \$1,500,000. By the extension of the seawall westwardly to Van Ness Avenue, at a cost of about \$440,000, a large and more valuable area will be reclaimed. The grading of these lots will cost about \$200,000, so that by this extension, at a gross cost of \$640,000, the State will be in the possession of property of a minimum value of \$1,500,000 in addition to that now reclaimed. There is no need of funds for carrying out this work, as its prosecution comes under the regular expenditures of the San Francisco Harbor Improvement Fund, as provided by law. The Board purposes to make this extension of the seawall as rapidly as circumstances will permit, so that in a few years the State lots will aggregate over sixty fifty-vara lots, and a value of at least \$3,000,000.

The Belt Railroad.

The Belt Railroad is already under construction in the building of the freight ferry slip on Section 4 of the seawall, at the foot of Lombard Street. The Board intends to lay a double track steel railroad (with a third rail for accommodating narrow gauge cars) from this slip both ways, to Powell Street on the west and to Pacific Street on the southeast. The building and equipping of this road will cost about \$95,000. Just west of Lombard Street a sidetrack is designed for making up trains for the slip. No other sidings or depot tracks are provided for. Proper facilities of this kind should be secured by all railroad companies reaching the city, but under no circumstances should such tracks be allowed on the seawall thoroughfare.

The connection of the northern portion of the belt railroad with the system entering at Second Street by ferry from Oakland has been closely considered by the Board. To extend the railroad south of Market Street in the present condition of the front would subject the Board to one of two serious dilemmas—either to sacrifice very important wharves and piers, or to acquire the right of way over costly private property. After the completion of nearly a mile of seawall south of Market Street, these difficulties of this line will be removed, except the complicated crossing of the street railroad termini at the foot of Market Street.

To avoid this delay, and at the same time reap the benefits of a com-

plete belt railroad at an early day, the Chief Engineer of the Board has suggested a road from Section 6 of the seawall down Drumm Street to Main Street, and along Main Street to the waterfront, and thence across the State's properties to the foot of Second Street, thus giving the desired connection.

There can be no doubt of the advantages of this route as compared with the waterfront route across the foot of Market Street, and as the district traversed is entirely devoted to manufacturing and mercantile interests, the property holders would not offer any serious objections to such route, especially when confronted with the disadvantages to which their properties would be subjected should the other route be ultimately adopted. As a surface road (to be utilized only at such hours of the night as may be designated) this road would cost about \$185,000.

The Board is therefore called upon to meet the following expenditures outside those contemplated in the law, yet within the just requirements of its duties and policy:

First—The passenger depot.....	\$504,000 00
Second—The northern end of the belt railroad.....	95,000 00
Third—The connection with the southern portion of the city.....	185,000 00
Total.....	\$784,000 00
Or in round numbers, \$800,000.	

To meet this, the Board recommends the authorization of the issuance (as required for the purposes) of 4 per cent bonds to the extent of \$800,000. To provide for the interest and redemption of these bonds it is recommended that the revenue derived from the depot building and the belt railroad be appropriated as a Sinking Fund, to be increased, if necessary, by the rentals from the seawall lots. It will be observed, that for the retirement of these bonds the State can thus set apart the revenue from at least \$3,800,000 worth of the most valuable property on the waterfront of the city.

Respectfully submitted.

WM. D. ENGLISH,
CHAS. O. ALEXANDER,
W. H. BROWN,
State Harbor Commissioners.

RECEIPTS AND DISBURSEMENTS FOR THE TWO FISCAL YEARS ENDING
JUNE 30, 1890.

REPORT OF DENNIS SPENCER, ATTORNEY.

To the honorable Board of State Harbor Commissioners of the State of California:

GENTLEMEN: I herewith present my report as attorney of your honorable Board, showing what has transpired in relation to litigation in charge of your attorney during the two fiscal years ending June 30, 1890.

ACTIONS PENDING AT THE DATE OF LAST REPORT.

The Pacific Transfer Company vs. Wm. Blanding et al. In Superior Court, Department No. 6, No. 23360.

J. E. McElrath, Esq., attorney for plaintiff.

Action to recover money paid under protest by plaintiff to defendants for wharfage.

1879, October 24, complaint filed. 1880, December 23, answer of William Blanding and A. M. Burns filed. 1881, January 10, answer of Bruce B. Lee filed. 1887, August 29, supplemental answer of William Blanding filed. August 29, action tried before Hon. Wm. T. Wallace, who, on January 4, 1888, ordered judgment to be entered in favor of defendants. 1888, June 6, findings filed. June 7, notice of decision served and filed. June 12, cost bill served and filed. June 13, judgment entered for defendants; notice of same served and filed. June 19, notice that plaintiff intends to move for a new trial received. September 8, plaintiff's proposed statement on motion for a new trial received. September 13, defendants' proposed amendments served. September 19, notice that plaintiff rejects defendants' proposed amendments received. 1889, February 1, statement on motion for new trial settled and allowed, and filed. April 5, motion for new trial denied. April 6, notice of denial of motion for new trial served. April 9, notice of denial of motion for new trial filed.

No appeal having been taken by plaintiff from the judgment or order denying new trial, said judgment and order are now final in favor of defendants, and case closed.

Samuel Soulé et al. vs. Benjamin Holliday, Jr. In Superior Court, Department No. 4, No. 2631.

W. H. L. Barnes, Esq., attorney for defendant.

Action to recover \$395 87 for dockage and toll.

On January 16, 1884, judgment was rendered in favor of plaintiffs for \$395 87, with interest thereon from April 11, 1874, and for costs amounting to \$11 50. This judgment remains unsatisfied.

The People of the State of California vs. Thomas Huson et al. In Supreme Court, No. 7207.

William M. Pierson, Esq., attorney for defendants.

Action to recover \$1,045 10 for deficiency in accounts of Huson as Wharfinger.

1878, May 6, complaint filed. August 15, answer filed. September 24, judgment for defendants. November 10, plaintiffs moved for a new trial, which was on May 5, 1880, denied, and on May 21, plaintiffs appealed to the Supreme Court. Pending the appeal, one of the defendants, E. J. Lewis, died in Tehama County. No administration has ever been taken out on his estate. September 28, action dismissed as to E. J. Lewis in Supreme Court. October 17, cause submitted in Supreme Court. 1889, January 25, cause reversed and remanded for a new trial. September 24, on new trial, judgment rendered for plaintiff for \$558 70 and \$10 costs, and findings waived. October 9, execution delivered to Sheriff. October 31, execution returned unsatisfied.

The People of the State of California vs. Robert G. Byrbee et al. In Superior Court, Department No. 8, No. 6251.

J. B. Lamar, Esq., attorney for defendants.

Action to recover \$460 78 for deficiency in accounts of West Evans as Wharfinger.

1882, February 10, complaint filed. Since the date of last report the following proceedings were had: 1888, August 20, default of A. F. Collins entered and judgment ordered for plaintiff for \$460 78, and interest from March 1, 1881, and costs, \$23 50. August 24, 1888, judgment entered. August 25, cost bill filed.

The People ex rel. The Board of State Harbor Commissioners vs. Thomas Quirk, J. C. Green, and Donald McLennan. In Superior Court, Department No. 3, No. 10491.

Messrs. W. H. L. Barnes and Ed. S. Salomon, attorneys for defendants.

Action brought to recover from Thomas F. Quirk \$14,149 81 for deficiency in his accounts as Wharfinger, and \$5,000 each from J. C. Green and Donald McLennan, as sureties on his official bond.

1883, August 22, complaint filed. This action was at issue as to defendants Green and McLennan. Since the issue was joined as to these defendants, both have died. No administration has yet been taken out upon the estate of J. C. Green. Special letters of administration have been issued to F. P. McLennan upon the estate of Donald McLennan. 1889, September 16, cause off calendar.

The People ex rel. The Board of State Harbor Commissioners vs. Josiah F. Fairfield, Charles J. Hendry, and W. S. Ray. In Superior Court, Department No. 2, No. 10938.

Messrs. Walter H. Levy and W. H. H. Hart, attorneys for defendants.

Action to recover \$12,672 25 from Josiah F. Fairfield for deficiencies

in his accounts as Wharfinger, and \$5,000 each from C. J. Hendry and W. S. Ray, as sureties on his official bond.

1883, October 19, complaint filed. Since the date of the last report this case has been tried and judgment rendered for plaintiff for \$1,911 95, and costs. 1889, May 24, motion for new trial denied. June 10, notice of appeal received. The case is now pending in the Supreme Court on appeal.

The People ex rel. The Board of State Harbor Commissioners vs. H. M. La Rue and A. S. Greenlaw. In Superior Court, Department No. 4, No. 10996.

Joseph F. Wendell, Esq., attorney for defendants.

Action to recover \$5,000 each from H. M. La Rue and A. S. Greenlaw, as sureties upon the official bond of William M. Haynie, late Wharfinger, for deficiencies in his accounts.

1883, October 26, complaint filed. Since the date of the last report the following proceedings were had: 1889, February 6, motion for new trial granted unless plaintiff remits from judgment \$336 30 for tolls and suffers judgment so modified for \$463 50. February 13, item for tolls remitted in open Court. February 15, motion for new trial denied. 1889, April 13, appeal to Supreme Court taken by defendants. The case is now pending in the Supreme Court.

The People of the State of California ex rel. William Irwin et al. vs. John C. Merrill, as executor of the last will of Martha B. Harris, deceased. In Superior Court, Department No. 4, No. 15708.

C. K. Bonestell, Esq., attorney for defendant.

Action to recover \$312 dockage due from bark "D. C. Murray," and penalties.

1885, August 10, complaint filed and summons issued. This case is in the same condition as at date of last report.

The People ex rel. Frank McCoppin et al. vs. Louisa Berryman, H. B. Berryman, K. Winter, and John Doe. In Superior Court, Department No. 2, No. 18290.

William M. Pierson, Esq., attorney for defendants.

Action to compel defendants to remove an unlawful obstruction alleged to have been placed by them on the inner half of East Street, near Jackson Street.

1886, August 17, complaint filed. October 16, demurrer received. December 3, demurrer overruled. December 30, answer received. Action now at issue and ready for trial on behalf of plaintiffs.

The People of the State of California ex rel. Frank McCoppin et al. vs. Robert Dunsmuir. In Superior Court, Department No. 2, No. 18978.

Messrs. Wilson & Wilson, attorneys for defendant.

Action to compel defendant to remove an unlawful obstruction alleged to have been placed by him on the inner half of East Street, between Pacific and Jackson Streets.

1886, October 30, complaint filed and summons issued. 1887, April 20, demurrer received. April 22, demurrer argued and submitted. July 1, demurrer overruled. September 23, answer received. This action is now at issue and ready for trial on behalf of plaintiffs.

W. H. Norton vs. W. C. Whitehead, administrator of the Estate of David Finley, deceased, A. C. Paulsell, John H. Wise, and William D. English, constituting the Board of State Harbor Commissioners. In Superior Court, Department No. 1, No. 19873.

Messrs. H. M. McGill and Whittemore & Sears, attorneys for plaintiff, and W. C. Burnett and W. H. H. Hart, attorneys for defendant W. C. Whitehead, administrator.

Action to recover judgment against the estate of David Finley, deceased, for money loaned deceased, and to restrain the Board from drawing its warrant in favor of the administrator for work done in the performance of a contract entered into between the Board and David Finley.

1887, March 15, complaint filed and temporary injunction issued and served upon the Board. April 28, demurrer overruled. May 13, amended complaint filed. May 20, answer of Board served and filed. May 30 and 31, action tried and submitted on briefs. November 28, judgment ordered in favor of the plaintiff. December 30, notice of decision and findings received. 1888, January 9, notice that Board intends to move for a new trial served and filed. May 31, statement on motion for a new trial settled and filed. July 27, motion for new trial denied. August 25, notice of appeal served. October 4, transcript on appeal filed in the Supreme Court. 1890, June 2, judgment and order affirmed by Supreme Court. The judgment in this case has been paid and satisfied and case closed.

Nancy Payne and Squire P. Dewey vs. William D. English, John H. Wise, and A. C. Paulsell, members of and constituting the Board of State Harbor Commissioners. In Superior Court, Department No. 6, No. 20614.

Messrs. Cope & Boyd, attorneys for plaintiffs.

Action to restrain the Board from erecting a wharf in front of plaintiff's property on the northerly line of Channel Street, between Third and Fourth Streets.

Since the date of the last report this case has been appealed to the Supreme Court, and the judgment there reversed and a new trial ordered. The case is now set for trial.

People of the State of California ex rel. William D. English et al. vs. James Kerwin, Martin Kruse, et al. In Superior Court, Department No. 6, No. 21614.

Quint, Esq., attorney for defendants.

Action to compel defendants to remove an unlawful obstruction alleged to have been placed by them in Montgomery Street, near the southeast corner of Montgomery and Chestnut Streets, and also from seawall lot No. 7.

Since the date of the last report this case has been tried and a judgment rendered in favor of plaintiffs, that defendants remove building from seawall lot No. 7, with \$1 damages and costs, and in favor of defendant for that part of building on Montgomery Street. The defendants have appealed from this judgment and filed their transcript in the same Court, where the case is now pending on appeal.

The People ex rel. W. D. English et al. vs. M. R. Roberts. In Superior Court, Department No. 4, No. 21668.

Messrs. Rosenbaum & Sheeline, attorneys for defendant.

Action to recover \$305 from defendant for dockage of the lighter "Contra Costa" and barge "Edison." The defendant claimed that the rule of the Board imposing these charges for dockage was in conflict with Sections 8 and 10 of Article I of the Federal Constitution.

Since the date of the last report the defendant has appealed this case to the Supreme Court, where it has been argued and submitted in department and ordered heard in bank. It now stands submitted in barge briefs.

CONDITION OF ACTIONS COMMENCED SINCE DATE OF LAST REPORT.

Stephen Ford vs. The Board of Harbor Commissioners of the State of California. In the Supreme Court, No. 13374.

Application for writ of mandate to compel the Board to pay salary of Stephen Ford.

James G. Maguire, attorney for plaintiff.

The case involved the question of the power of the Board to remove a collector from office before the expiration of the time of his appointment without cause affecting his official character or competency.

The case was argued and submitted, and the Court, on October 1, 1889, denied the writ and decided in favor of the Board. A petition for a rehearing was subsequently denied.

John Hackett vs. The State of California. In Superior Court, Department 6, No. 27567.

Action by plaintiff under authority of special statute of March 15, 1889, authorizing him as assignee of W. D. English et al., to institute suit against the State for damages for breach of contract by Harbor

T

Commissioners, with reference to furnishing materials for build
seawall.

BIENNIAL REPORT

OF THE

BOARD OF STATE HARBOR COMMISSIONERS

FOR THE

BAY OF SAN DIEGO.

OCTOBER 1, 1890.

SACRAMENTO:

STATE OFFICE, : : : : : J. D. YOUNG, SUPT. STATE PRINTING.

1890.

REPORT.

Hon. R. W. WATERMAN, Governor of the State of California:

Pursuant to the provisions of Section 2592 of the Political Code, the Board of State Harbor Commissioners for the Bay of San Diego submits this report of its transactions from the eighteenth day of March, 1889, to the first day of October, 1890.

Upon the organization of the Board, it was found that no funds had been provided for carrying on the waterfront improvements and other work directed in the Act creating the Board, nor for the payment of the salaries of the Commissioners or their appointed officers.

The only income received by the Board has been derived from occupants of lands of the State under control of the Board. This income has been small—not enough to pay office rent and incidental expenses—and the members of the Board have been compelled to draw upon their private funds and credit in order to carry out the more urgent provisions of the Act.

Following is a full report of all moneys received and disbursed:

RECEIPTS (FROM RENTS).

1889—September.....	\$40 50
October.....	67 50
November.....	60 00
December.....	50 50

Sept. 6—Pauline Kingston, rent of offices	25
Sept. 13—Wells, Fargo & Co., expressage	25
Sept. 30—Pauline Kingston, rent of offices	25
Total	\$725

ORGANIZATION.

Upon the organization of the Board, Clark Alberti, having been appointed for the four-year term, was made President, and J. H. Barbour appointed Acting Secretary. Mr. Barbour has continued to perform the duties of that position up to the present time, there being no funds at the disposal of the Board for the payment of the salary of Secretary.

On May 25, 1889, Harry L. Titus was appointed Attorney.

On June 26, 1889, M. G. Wheeler was appointed Chief Engineer.

On the same date it was ordered that the Board hold regular sessions every Tuesday.

On July 3, 1889, Nestor A. Young was appointed Chief Wharfing. His salary was fixed at \$150 per month, and official bond at \$10,000.

SEAL.

On August 27, 1889, the Board adopted a seal, having a central design representing the bay of San Diego with shipping in the foreground, with Point Loma and the entrance to the harbor in the distance, and a surrounding circle containing the words, "Board of State Harbor Commissioners. Bay of San Diego."

MAPS.

On August 27, 1889, the Board officially adopted a set of maps, prepared by the Chief Engineer, showing the waterfront (shore) line of the city of San Diego, from the foot of Ivy Street to the foot of Twentieth second Street.

SEAWALL.

According to Section 2588 of the Political Code, the Board of State Harbor Commissioners for the Bay of San Diego were directed, within one year from the passage of the Act, to employ two consulting

engineers to act with the Engineer of the Board in locating a line for a harbor embankment or seawall.

In January, 1890, at the request of this Board, Col. George H. Mendell and Lieut.-Col. W. H. H. Benyaurd, Corps of Engineers, U. S. A., San Francisco, consented to act with the Chief Engineer of the Board in making a survey, and selecting and locating a line for a harbor embankment and seawall. On March 3, 1890, their report was submitted to the Board.

On March 17, 1890, a special meeting of the Board was held for the purpose of considering the report of the engineers. In addition to the three Commissioners, there were present, Governor R. W. Waterman, Douglas Gunn, Mayor of the city of San Diego, and S. S. Johnston, President of the Board of Trustees of National City.

After a careful examination and consideration of the report it was adopted by a unanimous vote, and a copy of the map accompanying and forming a part of the report, showing the location of the seawall and pier-head lines, was ordered filed in the office of the Auditor and Recorder of San Diego County.

A copy of the map is hereto annexed. The red lines thereon indicate the seawall line so far as established; the blue lines show the pier-head line, beyond which piers or wharves shall not be extended into the channel.

The seawall line is laid at an average distance of two hundred feet from shore. The pier-head line follows as nearly as possible the line of twenty-four feet depth of water at low tide, which is the average depth maintained over the bar.

DESCRIPTION OF LINES.

Seawall Line, San Diego.—Starting from a point on the prolongation of the southerly side of Thorn Street, and three hundred feet westward from the southwest corner of California Street; thence in a straight line parallel to California Street to a point on the prolongation of south side of Palm Street; thence to a point on the prolongation of south side of Hawthorn Street, and four hundred feet west of California Street; thence parallel to Atlantic Street to a point on the prolongation of north side of Cedar Street, and two hundred feet from Atlantic Street; thence continuing parallel to Atlantic Street to a point on the prolongation of north side of H Street; thence in a curve of three hundred feet radius, with center at northeast corner of H and Atlantic Streets to the prolongation of east side of Atlantic Street; thence parallel to H Street to a point on the prolongation of west side of Arctic Street; thence to a point on westerly side of Columbia Street prolonged, four hundred and ten feet from southwest corner of Columbia and H Streets; thence parallel to the westerly side of the right of way of the California Southern Railway Company and two hundred feet from the same, to the prolongation of the northerly side of South Twentieth Street; thence to the prolongation of northerly side of South Twenty-first Street and one thousand and twenty feet from northeasterly corner of South Twenty-first Street and Pierce Avenue; thence parallel to Pierce Avenue to a point of prolongation of southerly line of South Twenty-fourth Street; thence to a point on prolongation of northwesterly side of South Twenty-seventh Street, and one hundred and ten feet from easterly side of Pierce Avenue; thence

to prolongation of southerly side of South Twenty-eighth Street, five hundred and fifty feet from the southeast corner of Pierce Avenue and South Twenty-eighth Street; thence to a point on prolongation of easterly side of Twenty-eighth Street, four hundred and forty feet from the southeast corner of Twenty-eighth Street and Colton Avenue; thence to a point on the prolongation of south side of South Thirty-third Street, five hundred and fifty feet from the west side of Avenue M; thence to a point on a prolongation of a line midway between Thor and Una Streets and distant four hundred and fifty feet from Pierce Avenue; thence parallel to Pierce Avenue to the prolongation of the boundary line between San Diego and National City.

Seawall Line, Coronado.—Starting from a point on the prolongation of Prospect Street, at a distance of one thousand and thirty feet from the northerly side of Second Street; thence to a point on the prolongation of the easterly side of Orange Avenue and four hundred and fifty feet from the northerly side of First Street; thence to a point on the prolongation of westerly side of K Street, two hundred and fifty feet from the northerly side of First Street.

NOTE.—The above described lines are united thus: Where the angle of intersection does not exceed 12 degrees, by a 2-degree curve; from 12 degrees to 24 degrees, by a 4-degree curve; and from 24 degrees to 40 degrees, by a 6-degree curve.

Pier-head Line, San Diego.—Beginning at a point on the prolongation of northern line of Ivy Street six thousand eight hundred and fifty feet from the western line of California Street; thence to a point on the prolongation of the south line of C Street three thousand seven hundred and forty feet from the west line of Atlantic Street; thence to a point on the prolongation of the west line of Atlantic Street one thousand and seventy feet from the south line of H Street; thence to a point on the prolongation of east line of Fifth Street four thousand one hundred and eighty feet from the south line of H Street; thence to a point on the prolongation of the northwestern line of South Twenty-first Street, two thousand and ninety feet from the northeastern line of Pierce Avenue; thence to a point on the prolongation of the southeastern line of South Twenty-eighth Street, one thousand three hundred and ninety feet from the northeastern line of Pierce Avenue; thence to a point on the prolongation of the northwestern line of Rigel Street, two thousand four hundred feet from the northeastern line of Oliver Avenue; thence to a point on the prolongation of division line between San Diego and National City, three thousand three hundred and fifty feet from its intersection with the prolongation of northeastern line of Oliver Avenue.

Pier-head Line, Coronado.—Beginning at a point on the prolongation of the southeastern line of Prospect Street, one thousand one hundred and seventy-five feet from the northeastern line of Second Street; thence to a point on the prolongation of the southeastern line of Orange Avenue six hundred and fifty feet from the northeastern line of First Street; thence to a point on the prolongation of the northwestern line of First Street, one thousand three hundred feet from the northeastern line of First Street.

The lines, as above described, and as shown on the accompanying map, are identical with those adopted by the Board of United States Engineer Officers appointed to establish the harbor lines of San Diego Harbor and adjacent waters.

NECESSITY FOR SEAWALL.

Two years ago the growing need of better harbor facilities resulted in the selection, by the Chamber of Commerce, the Real Estate Exchange, and the City Council, of a Harbor Committee of thirteen to consider the situation. Propositions had been made to the municipal government by private individuals and corporations, at various times, for the construction of a bulkhead along the city front, but the committee, after carefully considering the matter, did not deem it advisable to recommend that a franchise be granted to any person, company, or corporation which would give them control of any considerable portion of the waterfront; but that, in view of the importance and value of the harbor and waterfront, and its constantly extending commerce, the exclusive control should always remain in the State. Accordingly, a bill similar to that governing the harbor of San Francisco was prepared, introduced, and became a law at the twenty-eighth session of the California Legislature. With a few amendments, made necessary by the haste used in its original preparation, the Act will afford comprehensive provisions for the control, care, and improvement of the harbor.

CONSTRUCTION OF SEAWALL.

Very favorable natural conditions exist for the substantial and economical construction of a seawall and thoroughfare of the kind contemplated. The bottom of the bay along the course of the located line is hard and comparatively level, the average rise and fall of the tide is but five feet, and there is no injury from rough seas to be guarded against. The plans under consideration by the Board contemplate a wall of stone twelve feet in height, twenty-four feet in width at the base, and six feet in width at the top; the outer face, to the thickness of six feet, being carefully laid with large rocks of not less than five hundred pounds weight each, and with a one half to one slope; the inner side to be composed of smaller rock, and having a one to one slope, the space between the wall and the shore to be solidly filled with earth and paved thoroughfare created, which would supply valuable and much needed facilities for the business of the harbor. Reliable estimates, made under the direction of the Board, place the cost of the seawall and thoroughfare complete at sixty-five thousand dollars (\$65,000) per section of one thousand feet.

In designating the sections, the foot of H Street has been selected as the initial point, that being the natural center of the city's maritime business. The sections extending northward are lettered in regular order, and those to the south are numbered. This affords a brief and distinct system of nomenclature, susceptible of all probable expansion without requiring modification.

WHARVES.

With one exception, the wharves in use are in bad condition; most of them are quite old and cannot long survive the attacks of the teredo. They are all owned and operated by private individuals and corporations, under franchises granted by the municipal authorities before the State assumed control of the harbor. Most of these franchises were granted or renewed during the period of 1886 to 1889, usually for twenty

years each. No system has been observed in the construction of these wharves; they ramble in all directions, and several of them extend beyond the pier-head line, causing an unsightly and dangerous condition. With the construction of the seawall and thoroughfares well under way it would be possible for the Board to adopt a uniform system of piers, new ones to be built, from time to time, as they are needed.

GENERAL CONDITION.

Since their appointment, March 18, 1889, the members of the Board have exercised a constant supervision over the harbor. A full and complete map of the entire waterfront of the harbor of San Diego has been approved and adopted, and a certified copy filed in the office of the Auditor and Recorder of San Diego County.

Through the efforts of the Board an improvement has been made in the method of disposing of the city's garbage. The dumping of oil cans and other injurious articles in the vicinity of the channel and the bay has been stopped, and suitable points outside the harbor have been designated for the depositing of all refuse.

The general condition of the harbor, with the exception noted in connection with the wharves, is good.

The Board takes occasion to acknowledge its obligations to Col. G. A. Mendell and Lieut.-Col. W. H. H. Benyard, Corps of Engineers, U. S. A., for their valuable and timely services in connection with the establishment of the seawall line, and suggests that it be empowered to make proper compensation to them.

RECOMMENDATION.

That the sum of one hundred and ninety-five thousand dollars (\$195,000) be appropriated for the construction of seawall and thoroughfares and piers, at points on the city front where they are most urgently needed.

Respectfully submitted.

CLARK ALBERTI,
W. W. STEWART,
J. H. BARBOUR,

Board of State Harbor Commissioners for the Bay of San Diego

OCTOBER 1, 1890.

REPORT OF HARRY L. TITUS, ATTORNEY.

To the honorable Board of State Harbor Commissioners for the Bay of San Diego:

GENTLEMEN: I respectfully submit the following report of the condition of the cases in the Superior Court of the County of San Diego in which your Board is or was interested, to wit:

The People, etc., vs. John Doe. No. 4042, Department Three.

This action was brought by plaintiffs for possession of property known as "D-Street Bath House."

Complaint filed December 10, 1889. Summons served December 10, 1889. Demurrer to complaint filed January 4, 1890. On February 1, 1890, the defendant admitted authority of the Board over the property, and the action was thereupon dismissed.

The People, etc., vs. T. J. Higgins. Two cases: No. 4474, Department Two; No. 4475, Department One.

These actions involve the alleged conveyances of tide lands by the city of San Diego.

Complaint filed April 11, 1890. Demurrer to complaint filed May 21, 1890. On May 21, 1890, stipulations were entered into whereby it was agreed that they should be determined at the same time as the cases of A. Klauber et al. vs. Board et al. (see below).

A. Klauber et al. vs. Board of Harbor Commissioners et al. Two cases: No. 4563, Department Three; No. 4564, Department One.

These actions are based on alleged conveyances of certain tide lands by the State.

Complaint filed April 19, 1890. Demurrer to complaint filed May 7, 1890. Court to hear arguments therein in October.

People, etc. vs. City of San Diego. No. 4973, Department Two.

This action was brought to compel the City of San Diego to remove the garbage wharf from the foot of H Street.

Complaint filed June 30, 1890. Summons served June 30, 1890. Demurrer to complaint filed July 11, 1890. Demurrer overruled by court September 5, 1890. Answer filed October 3, 1890.

HARRY L. TITUS,

Attorney for the Board of State Harbor Commissioners for the Bay of San Diego.

OCTOBER 1, 1890.

FIFTH ANNUAL REPORT

OF THE

BOARD OF DENTAL EXAMINERS

OF THE

STATE OF CALIFORNIA.

SACRAMENTO:

STATE OFFICE : : : J. D. YOUNG, SUPT. STATE PRINTING.

1889.

REPORT.

To his Excellency R. W. WATERMAN, Governor of the State of California:

SIR: The Board of Dental Examiners of the State of California submit the following as their fifth annual report of its proceedings, together with an account of all moneys received and disbursed, in compliance with the requirements of that certain Act of the Legislature, entitled "An Act to insure the better education of practitioners of dental surgery, and to regulate the practice of dentistry in the State of California," approved March 12, 1885, a copy of which is hereunto annexed.

Since issuing the last report, the Board has held two meetings.

On April 24, 1889, the Governor, R. W. Waterman, appointed on the Board E. L. Townsend, of Los Angeles, vice H. J. Plomteaux, term expired.

At the meeting held August 20, 1889, seven candidates appeared for examination, all of whom successfully passed. At this meeting the election of officers was held.

Dr. J. J. Birge, of San Francisco, was elected President and Dr. W. F. Griswold, of San Francisco, was elected Secretary.

The following are the present officers and members of the Board:

Dr. J. J. Birge, President	San Francisco.
W. J. Younger, M.D.	San Francisco.
E. E. Knowles, M.D., D.D.S.	San Francisco.
J. S. Crawford	Los Angeles.
E. L. Townsend, D.D.S.	Los Angeles.
Thos. Morffew, D.D.S.	San Francisco.
W. F. Griswold, Secretary	San Francisco.

During the past year two persons have been registered, twelve diplomas have been indorsed, and seven candidates have received certificates on examination.

A list of all whose names have been registered, and of all whose diplomas have been indorsed as satisfactory to the Board, and of all who have received certificates by examination of the Board, is hereto annexed.

The following is an account of all money received and disbursed by the Board since the last report:

RECEIPTS.

For registration, \$1 for each—four persons	\$4 00
Received for indorsement of diploma, \$10 for each applicant—twelve applicants	120 00
From examination, \$10 for each applicant—eleven applicants	110 00
Balance on hand at last report	246 20
Total	\$480 20

DISBURSEMENTS.

Printing	\$67 50
Stationery	17 75
Traveling expenses of members	68 00
Necessary clerical expenses	35 00
Rent of hall, one year	105 00
Incidentals	17 55
Total	\$310 80
Balance in hand of Secretary	\$169 40

All persons who are now practicing dentistry in this State, and who have not received a certificate from this Board in pursuance of the Act mentioned, are violating the law and are subject to arrest and a fine of \$500, \$200, or imprisonment for six months in the county jail for each and every offense. It will be necessary for all persons who may hereafter desire to engage in the practice of dentistry in this State to secure a certificate from this Board, upon a diploma from a reputable dental college, or after examination in dental surgery, as required by the Act of March 12, 1885. In examining applicants for certificates to practice dentistry, the Board will examine in the branches of anatomy, physiology, pathology, histology, hygiene, materia medica, therapeutics, chemistry, metallurgy, operative dentistry, prosthetic dentistry, and dental jurisprudence. All examinations must be in writing, and the applicant must receive a general average of 75 per cent to entitle him to a certificate. Clinical operations in operative or prosthetic dentistry shall be optional with the Board of Examiners. The regular meeting for the examination of candidates will be held on July 10, 1890.

It seems to be popularly supposed that the Board of Examiners shall prosecute all persons violating the law. This is not the case; but it is the duty of every dentist to see that the law is enforced, and it is the duty of the prosecuting attorney of each county to prosecute every person violating the law, on the receipt of information of such violation and the necessary evidence to establish the fact.

STEP TO BE TAKEN TO PROSECUTE.

Positive evidence of the violation of the law should first be obtained. This, with a formal information and a list of witnesses, should be handed to the prosecuting attorney, who will then be in duty bound to prosecute the case.

The attention of licensees is called to the fact that they are required to have their licenses recorded with the County Clerk of the county in which such persons may reside; it requires no action of the Board to work a forfeiture of the license under Section 8 of the law: the fact of failure to have it recorded, within six months from date of issue, subjects licensee to the penalty for neglect.

We recommend that Section 6 of the Dental Law be amended, so that the informer of violations of the Act, "in cases of conviction," shall receive one half of the fine imposed.

The Board is more than ever impressed with the importance of legislation of this character, and have greater confidence that the judicious administration of the law under which they act must redound to the benefit of the community.

All of which is respectfully submitted. Board of Dental Examiners of the State of California.

W. F. GRISWOLD,
Secretary.

OCTOBER 15, 1889.

J. J. BIRGE,
President.

AN ACT

To Insure the Better Education of Practitioners of Dental Surgery, and to Regulate the Practice of Dentistry in the State of California.

[Approved March 12, 1885.]

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. It shall be unlawful for any person, who is not at the time of the passage of this Act engaged in the practice of dentistry in this State, to commence such practice unless he or she shall have obtained a certificate, as hereinafter provided.

SEC. 2. A Board of Examiners, to consist of seven practicing dentists, is hereby created, whose duty it shall be to carry out the purposes and enforce the provisions of this Act. The members of said Board shall be appointed by the Governor from the dental profession of the State at large. The term for which the members of said Board shall hold their office shall be four years, except that two of the members of the Board first to be appointed under this Act shall hold their office for the term of one year, two for the term of two years, two for the term of three years, and one for the term of four years, respectively, and until their successors shall be duly appointed and qualified. In case of a vacancy occurring in said Board, such vacancy shall be filled by the Governor, in conformity with this section.

SEC. 3. Said Board shall choose one of its members President, and one the Secretary thereof, and it shall meet at least once in each year, and as much oftener and at such times and places as it may deem necessary. A majority of said Board shall, at all times, constitute a quorum, and the proceedings thereof shall, at all reasonable times, be open to public inspection.

SEC. 4. Within six months from the time this Act takes effect, it shall be the duty of every person who is now engaged in the practice of dentistry in this State to cause his or her name and residence, or place of business, to be registered with said Board of Examiners, who shall keep a book for that purpose. The statement of every such person shall be verified under oath before a Notary Public or Justice of the Peace, in such manner as may be prescribed by the Board of Examiners. Every person who shall so register with said Board as a practitioner of dentistry, shall receive a certificate to that effect, and may continue practice as such without incurring any of the liabilities or penalties provided in this Act, and shall pay to the Board of Examiners for each registration the fee of one dollar. It shall be the duty of the Board of Examiners to forward to the County Clerk of each county in the State a certified list of the names of all persons residing in his county who have registered in accordance with the provisions of this Act, and it shall be the duty of all County Clerks to register such names in a book to be kept for that purpose.

SEC. 5. Any and all persons, who shall so desire, may appear before the Board at any of its regular meetings and be examined with reference to their knowledge and skill in dental surgery; and if the examination of any such person or persons shall prove satisfactory to said Board, the Board of Examiners shall issue to such persons as they shall find to possess the requisite qualifications a certificate to that effect, in accordance with the provisions of this Act. Said Board shall also indorse as satisfactory diplomas from any reputable dental college, when satisfied of the character of such institution, upon the holder furnishing evidence satisfactory to the Board of his or her right to the same, and shall issue certificates to that effect within ten days thereafter. All certificates issued by said Board shall be signed by its officers, and such certificates shall be prima facie evidence of the right of the holder to practice dentistry in the State of California.

SEC. 6. Any person who shall violate any of the provisions of this Act shall be deemed guilty of a misdemeanor, and, upon conviction, may be fined not less than fifty dollars nor more than two hundred dollars, or confined six months in the county jail, for each and every offense. All fines recovered under this Act shall be paid into the Common School Fund of the county in which such conviction takes place.

SEC. 7. In order to provide the means for carrying out and maintaining the provisions of this Act, the said Board of Examiners shall charge each person applying to or appearing before them for examination for a certificate of qualifications, a fee of ten dollars, which fee shall be in no case returned; and out of the funds coming into the possession of the Board from the fees so charged, and penalties received under the provisions of this Act, all legitimate and necessary expenses incurred in attending the meetings of said Board shall be paid; and no part of the expenses of the Board shall ever be paid out of the State Treasury. All moneys received in excess of expenses above provided for, shall be held by the Secretary of said Board, as a special fund for meeting the expenses of said Board, and carrying out the provisions of this Act, he giving such bonds as the Board shall from time to time direct; and said Board shall make an annual report of its proceedings to the Governor by December first of each year, together with an account of all moneys received and disbursed by them, pursuant to this Act.

SEC. 8. Any person who shall receive a certificate from said Board to practice dentistry, shall cause his or her certificate to be registered with the County Clerk of the county in which such person may reside, and the County Clerk shall charge for registering such certificates a fee of one dollar. Any failure, neglect, or refusal on the part of any person

holding such certificate to register the same with the County Clerk as above directed, within a period of six months, shall work a forfeiture of the certificate, and no certificate, when once forfeited, shall be restored, except upon the payment to said Board of twenty-five dollars, as a penalty of such neglect, failure, or refusal.

Sec. 9. Any person who shall knowingly or falsely claim, or pretend to have or hold a certificate of license, diploma, or degree, granted by any society organized under and pursuant to the provisions of this Act, or who shall falsely, and with intent to deceive the public, claim or pretend to be a graduate from any incorporated dental college, shall be deemed guilty of a misdemeanor, and shall be liable to the same penalty as provided in section six.

Sec. 10. Nothing in this Act shall be so construed as to prohibit any practicing physician from extracting teeth.

Sec. 11. This Act shall take effect immediately.

SIXTH ANNUAL REPORT

OF THE

BOARD OF DENTAL EXAMINERS

OF THE

STATE OF CALIFORNIA.

SACRAMENTO:

STATE OFFICE, : : : : : J. D. YOUNG, SUPT. STATE PRINTING.
1890.

REPORT.

To his Excellency R. W. WATERMAN, Governor of the State of California:

SIR: The Board of Dental Examiners of the State of California submit the following as their sixth annual report of its proceedings, together with an account of all moneys received and disbursed in compliance with the requirements of that certain Act of the Legislature, entitled "An Act to insure the better education of practitioners of dental surgery, and to regulate the practice of dentistry in the State of California," approved March 12, 1885, a copy of which is hereunto annexed.

Since issuing the last report, the Board has held four meetings.

On May eighth, Governor R. W. Waterman appointed on the Board F. F. Tebbetts, of Sacramento, vice J. S. Crawford, term expired.

At the meeting held July 10, 1890, eighteen candidates appeared for examination, nine of whom successfully passed. At this meeting the election of officers was held.

Dr. S. E. Knowles, of San Francisco, was elected President, and Dr. W. F. Griswold, of San Francisco, was elected Secretary.

The following are the present officers and members of the Board:

S. E. Knowles, M.D., D.D.S., President	San Francisco.
W. J. Younger, M.D.	San Francisco.
Dr. J. J. Birge	San Francisco.
Thomas Morfiew, D.D.S.	San Francisco.
Dr. F. F. Tebbetts	Sacramento.
E. L. Townsend, D.D.S.	Los Angeles.
Dr. W. F. Griswold, Secretary	San Francisco.

During the past year two persons have been registered.

Eighteen diplomas have been indorsed, and nine candidates have received certificates on examination.

A list of all whose names have been registered, and of those whose diplomas have been indorsed, and of all those who have received certificates on the examinations of the Board, is hereunto annexed.

The following is an account of all money received and disbursed by the Board since the last report:

RECEIPTS.

For registration, for four persons, at \$1 each	\$4 00
For indorsement of diplomas, eighteen applicants, at \$10 each	180 00
For examination of twenty-one applicants, at \$10 each	210 00
Total	\$394 00
Balance on hand at last report	169 40
Making a total of	\$563 40

DISBURSEMENTS.

Printing	\$23 05
Stationery	35 12
Traveling expenses of members	49 00
Necessary clerical expenses	35 00
Rent of hall, one year	130 00
Incidentals	15 55
Fee returned by order of the Board	10 00
Total	300 72
Balance in hand of Secretary	\$262 68

All persons who are now practicing dentistry in this State, and who have not received a certificate from this Board in pursuance of the Act mentioned, are violating the law, and are subject to arrest, and a fine of \$50 to \$200, or imprisonment for six months in the county jail, for each and every offense.

It will be necessary for all persons who may hereafter desire to engage in the practice of dentistry in this State to secure a certificate from this Board, upon a diploma from a reputable dental college, or after examination in dental surgery, as required by the Act of March 12, 1885. In examining applicants for certificates to practice dentistry the Board will examine in the branches of anatomy, physiology, pathology, histology, hygiene, materia medica, therapeutics, chemistry, metallurgy, operative dentistry, dental jurisprudence, and prosthetic dentistry. Examinations will be both written and clinical. Seventy-five per cent will be required on the written examinations, and in addition a satisfactory clinical examination will be required of all those who are successful on the written examinations.

Each applicant must come prepared to do any work designated for him. The Board will furnish chairs, engines, vulcanizers, and all necessary materials.

The next regular meeting for the examination of candidates will be held in San Francisco, commencing Tuesday, August 11, 1891, at 10 A. M.

It seems to be popularly supposed that the Board of Examiners shall prosecute all persons violating the law. This is not the case; but it is the duty of every dentist to see that the law is enforced, and it is the duty of every prosecuting attorney of each county to prosecute every person violating the law, on receipt of information of such violation and the necessary evidence to establish the fact.

STEPS TO BE TAKEN TO PROSECUTE.

Positive evidence of the violation of the law must first be obtained. This, with a formal information and a list of witnesses, should be handed to the prosecuting attorney, who will then be in duty bound to prosecute the case.

The attention of licensees is called to the fact that they are required to have their licenses recorded with the County Clerk of the county in which such persons may reside; it requires no action of the Board to work a forfeiture of the license under Section 8 of the law: The fact of failure to have it recorded within six months of date of issue, subjects licensee to the penalty for neglect.

We recommend that Section 6 of the Dental Law be amended, so that the informer of violations of the Act, "in cases of conviction," shall receive one half the fine imposed.

The Board is more than ever impressed with the importance of legislation of this character, and have greater confidence that the judicial administration of the law under which they act must redound to the benefit of the community.

All of which is respectfully submitted. Board of Dental Examiners of the State of California.

W. F. GRISWOLD,
Secretary.

S. E. KNOWLES, M.D., D.D.S.,
President.

OCTOBER 13, 1890.

AN ACT

To Insure the Better Education of Practitioners of Dental Surgery, and to Regulate the Practice of Dentistry in the State of California.

[Approved March 12, 1885.]

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. It shall be unlawful for any person, who is not at the time of the passage of this Act engaged in the practice of dentistry in this State, to commence such practice unless he or she shall have obtained a certificate, as hereinafter provided.

SEC. 2. A Board of Examiners, to consist of seven practicing dentists, is hereby created, whose duty it shall be to carry out the purposes and enforce the provisions of this Act. The members of said Board shall be appointed by the Governor from the dental profession of the State at large. The term for which the members of said Board shall hold their office shall be four years, except that two of the members of the Board first to be appointed under this Act shall hold their office for the term of one year, two for the term of two years, two for the term of three years, and one for the term of four years, respectively, and until their successors shall be duly appointed and qualified. In case of a vacancy occurring in said Board, such vacancy shall be filled by the Governor, in conformity with this section.

SEC. 3. Said Board shall choose one of its members President and one Secretary thereof, and it shall meet at least once in each year, and as much oftener and at such times and places as it may deem necessary. A majority of said Board shall, at all times, constitute a quorum, and the proceedings thereof shall, at all reasonable times, be open to public inspection.

SEC. 4. Within six months from the time this Act takes effect, it shall be the duty of every person who is now engaged in the practice of dentistry in this State to cause his or her name and residence, or place of business, to be registered with said Board of Examiners, who shall keep a book for that purpose. The statement of every such person shall be verified under oath before a Notary Public or Justice of the Peace, in such manner as may be prescribed by the Board of Examiners. Every person who shall so register with said Board as a practitioner of dentistry, shall receive a certificate to that effect, and may continue to practice as such without incurring any of the liabilities or penalties provided in this Act, and shall pay to the Board of Examiners for each registration the fee of one dollar. It shall be the duty of the Board of Examiners to forward to the County Clerk of each county in the State a certified list of the names of all persons residing in his county who have registered in accordance with the provisions of this Act, and it shall be the duty of all County Clerks to register such names in a book to be kept for that purpose.

SEC. 5. Any and all persons who shall so desire, may appear before the Board at any of its regular meetings and be examined in reference to their knowledge and skill in dental surgery; and if the examination of any such person or persons shall prove satisfactory to said Board, the Board of Examiners shall issue to such persons as they shall find to possess the requisite qualifications a certificate to that effect, in accordance with the provisions of this Act. Said Board shall also indorse as satisfactory, diplomas from any reputable dental college, when satisfied as to the character of such institution, upon the holder furnishing evidence satisfactory to the Board of his or her right to the same, and shall issue certificates to that effect within ten days thereafter. All certificates issued by said Board shall be signed by its officers, and such certificates shall be prima facie evidence of the right of the holder to practice dentistry in the State of California.

SEC. 6. Any person who shall violate any of the provisions of this Act shall be deemed guilty of a misdemeanor, and upon conviction, may be fined not less than fifty dollars nor more than two hundred dollars, or confined six months in the county jail, for each and every offense. All fines recovered under this Act shall be paid into the Common School Fund of the county in which such conviction takes place.

SEC. 7. In order to provide the means for carrying out and maintaining the provisions of this Act, the said Board of Examiners shall charge each person applying to, or appearing before them for examination for a certificate of qualifications, a fee of ten dollars, which fee shall be in no case returned; and out of the funds coming into the possession of the Board from the fees so charged, and penalties received under the provisions of this Act, all legitimate and necessary expenses incurred in attending the meetings of said Board shall be paid; and no part of the expenses of the Board shall ever be paid out of the State Treasury. All moneys received in excess of expenses above provided for shall be held by the Secretary of said Board as a special fund for meeting the expenses of said Board, and carrying out the provisions of this Act, he giving such bonds as the Board shall from time to time direct; and said Board shall make an annual report of its proceedings to the Governor by December first of each year, together with an account of all moneys received and disbursed by them pursuant to this Act.

SEC. 8. Any person who shall receive a certificate from said Board to practice dentistry, shall cause his or her certificate to be registered with the County Clerk of the county in which such person may reside, and the County Clerk shall charge for registering such certificate a fee of one dollar. Any failure, neglect, or refusal on the part of any person holding such certificate to register the same with the County Clerk as above directed, for a period of six months, shall work a forfeiture of the certificate, and no certificate, when once forfeited, shall be restored, except upon the payment to said Board of twenty-five dollars, as a penalty of such neglect, failure, or refusal.

SEC. 9. Any person who shall knowingly or falsely claim, or pretend to have or hold a certificate of license, diploma, or degree granted by any society organized under and pursuant to the provisions of this Act, or who shall falsely, and with intent to deceive the public, claim, or pretend to be a graduate from any incorporated dental college, shall be deemed guilty of a misdemeanor, and shall be liable to the same penalty as provided in Section 6.

SEC. 10. Nothing in this Act shall be so construed as to prohibit any practicing physician from extracting teeth.

SEC. 11. This Act shall take effect immediately.

BIENNIAL REPORT
OF THE
STATE BOARD OF FISH COMMISSIONERS
OF THE
STATE OF CALIFORNIA,
FOR THE
YEARS 1888-1890.

COMMISSIONERS.

JOSEPH ROUTIER, Sacramento, President.
J. DOWNEY HARVEY, San Francisco, Secretary.
CHARLES JOSSELYN, San Francisco.

SACRAMENTO:
STATE OFFICE, : : : : : J. D. YOUNG, SUPT. STATE PRINTING.
1890.

REPORT.

To Hon. R. W. WATERMAN, Governor of the State of California:

SIR: The undersigned have the honor hereby to present their Second Biennial Report relative to the fish industry of the State.

The fish interests of the State are in a comparatively satisfactory condition.

The spring run of salmon for 1889 was fair, as was also that of 1890. The fall run of 1889 showed improvement over that of the previous years. The supply of shad continues to be large. Carp is found in large quantities in all the waters of the State; they are not a desirable food fish. Sturgeon continues to diminish every year, owing to the indiscriminate slaughter waged upon them by Chinese fishermen. Special efforts have been made to stock the rivers and lakes with the various species of trout. In these efforts we have been quite successful, as evidenced by the astonishment of many at finding them abundant in streams to which they had for years been strangers. This will appear more pointedly in the report of the Superintendent of Hatcheries. Black bass have been distributed in different places throughout the State. The increase of this fish at Crystal Springs, San Mateo County, has been rapid, and is the source from which our supply has been obtained. Catfish have developed into popular favor, and are plentiful in most of the waters of the State.

SEALS AND SEA LIONS.

We respectfully repeat the recommendations of the last report of the Fish Commissioners, as follows: These aquatic animals are a serious detriment to the fish interests of the State. They sit at the entrance of Golden Gate as royal toll gatherers, and take the lion's share of the schools of the finny tribe as they pass from the broad Pacific into the bay of San Francisco, preparatory to an ascent of our rivers. In the opinion of the Commission, they are great destroyers of the salmon. They appear to be more numerous at Seal Rock and around the entrance of San Francisco Bay than in former years, owing, no doubt, to the fact that the fishermen have driven them with their nets from Suisun and San Pablo Bays. They not only guard the entrance of San Francisco Bay, but are found at the entrance of Monterey, Bolenas, Point Arena, Tomales, and Shoalwater Bays. This and former Commissions and the public press have repeatedly invoked legislative action to prevent the immense destruction of fish constantly going on and increasing by these worthless animals. It is highly important to our citizens to have the food of which they are so deprived, and in their behalf remedial legislation is again urgently demanded.

STEAM LAUNCH.

The steam launch "Governor Stoneman," constructed at a cost of over \$4,000, was found useless for the service for which it was intended.

In the interest of economy and an efficient service, and in response to an Act of the Legislature, we disposed of it for the sum of \$1,100, which money is in the State Treasury for the purchase of other boats suited to economical use in quest of persons engaged in illegal fishing.

HATCHERIES.

The Shebley Hatchery has been abandoned, the supply of water being inadequate. The Hat Creek Hatchery has been abandoned, and it is the desire of the Commission that the Legislature provide for its removal to a more desirable location. The Sisson Hatchery has been a great success. A new hatchery has also been constructed at Lake Tahoe. The details relating to all these hatcheries, will be found in the report of the Superintendent of Hatcheries. The United States Fish Commission have furnished us with all the eyed salmon eggs it is possible for us to handle, for which they are entitled to the thanks of every person in the State.

FISH LADDERS.

Fish ladders have been built in most places where necessary, but many are not properly built, are not kept in repair, and are to a considerable extent inefficient, owing to the fact that the Board has no appropriation from which to defray the expenses of construction.

The last Legislature appropriated \$500 for the removal of obstructions at Salmon Falls, in the American River. This has been successfully accomplished.

LICENSES.

The amount received from sales of licenses to fishermen for last year exceeds the sum received for sales of the previous year. The receipts were as follows:

LICENSES FOR THE YEAR 1888.

Received of Controller.	Class.	Value of Each.	On Hand March 31, 1889.	Sold during the Year.	Total Value of Licenses Sold.	Commissions Allowed for Collecting.	Net Amount due the State.
700	A	\$5 00	208	492	\$2,485 00	\$300 01	\$2,184 99
100	B	7 50	93	7	62 50	7 87	44 63

1	E	15 00	-----	1	15 00	2 25	12 75
Total, 923	-----	-----	108	820	\$4,452 50	\$455 62	\$3,996 88

APPROPRIATIONS.

The last Legislature appropriated \$20,000, one half of which was to be used for support in each of the forty-first and forty-second fiscal years. The expenditures made will be found in the proper place herein. The sum of \$2,000 was appropriated for the purchase and importation of certain game birds into the State. The Board has so far been unable to obtain most of the species named in the Act, but hopes yet to secure them. Some quantities of Chinese quail and Oregon pheasants have been purchased and distributed in accessible localities. These quail have propagated already fairly well, and supplies can soon be had from them for other localities, as required. The \$2,000 appropriated for the prosecution of violators of the fish laws has been expended, and was insufficient to defray the costs of prosecutions.

The Oregon pheasants can only be had by sending agents there to buy them in person, and they cannot be had at less than about \$15 per pair. So far only forty pairs have been secured. The cost of the Chinese quail is about \$20 per hundred. We have obtained about one thousand three hundred so far. These have been distributed pretty widely throughout the State. The amount so far drawn from the appropriations for game birds is \$1,500, of which up to this time the sum of \$1,020 has been expended.

COUNTY GOVERNMENT BILL.

Section 38 of the Act of March 16, 1889, amending the County Government Act, authorizing the Boards of Supervisors to fix the size of fish net meshes, should be repealed. If one county has one law, and another county another one, it renders it impossible for violators of the law to be punished, and the law thereby becomes inoperative. One county has already fixed the size of meshes for fishing at four inches, instead of the seven and one half inches prescribed by the statutes.

If the Legislature should agree with the recommendations of the Superintendent of Hatcheries for the creation of more hatcheries, the appropriation he asks for, or more, may be necessary. We recommend an appropriation of \$10,000 for patrol purposes. If illegal fishing is to be prohibited, men enough to patrol the rivers must be had; otherwise, illegal fishing will go on as usual with impunity.

FOOD FISHES.

In its proper place herein will be found an interesting and instructive paper on the food fishes of this State from the pen of Dr. C. H. Eigenmann, who is regarded as authority upon that subject; also, a letter from Dr. H. W. Harkness, President of the California Academy of Sciences.

WIRE SCREENS FOR IRRIGATION DITCHES.

The millions upon millions of fish, large and small, that pass into the open heads of irrigating ditches, only to die when the water becomes exhausted, will decimate the fish supply faster than it can be restored from all the hatcheries in the State, in those localities where irrigation is largely in use. This has rendered necessary in some of the States the enactment of laws requiring the use of close-meshed wire screens at

the entrance to all irrigating ditches in the State. What is necessary elsewhere, is indispensable here, and we recommend the passage of a law here similar to the following law in the State of Wyoming upon this subject:

Any person or persons, corporation or corporations owning in whole or in part, or leasing, operating, or having in charge any mill-race, irrigating ditch, or canal, taking or receiving its water from any river, creek, or stream in this territory in which fish has been placed or may exist, shall put or cause to be placed and maintained over the inlet of such ditch, canal, or mill-race a wire screen of such construction, fineness, strength, or quality as shall prevent any such fish from entering such ditch, canal, or mill race, when requested to do so by the Fish Commissioner.

Any person or persons, corporation or corporations violating the provisions of the preceding section, or who shall neglect or refuse to provide, put up, and maintain such screen, in accordance with the provisions of the preceding section, shall be guilty of a misdemeanor, and on conviction thereof shall be punished by a fine of not less than ten dollars, and not more than one hundred dollars, or by imprisonment in the county jail not exceeding thirty days for each offense; *provided*, that the continuance by any person of such neglect or refusal from day to day after notification in writing shall constitute a separate and distinct offense for each and every day of the continuance of such neglect or refusal; *provided further*, that no offense shall be committed by reason of such screens not over the inlet of any ditch, canal, or mill-race when water is not entering the same.

LAWS RECOMMENDED.

We desire to renew the recommendations contained in our last biennial report, to wit:

"The close season for salmon should be enlarged. It is now between the thirtieth day of August and the first day of October. It should be from the first day of August to the first day of October. The Commission earnestly recommends legislative remedial action to prevent the destruction of fish by seals and sea lions. We further recommend that the License Act be amended so as to declare the penalty for its violation. We also recommend that a law be passed providing for the confiscation and destruction of all unlawful nets, seines, and traps of any description found in use. The possession of fish out of season, or fish of under size, should be made a misdemeanor. Some legislation should be had regarding the taking of immature fish, and defining 'immature fish,' at least so far as it concerns salmon, shad, sturgeon, and trout."

DEER.

We recommend that the killing of deer be prohibited absolutely for the next two years, and also the having in possession the skin of any deer for the same time. This is rendered necessary because of the great loss of these animals during the extremely severe weather of the last two winters, as well as their indiscriminate slaughter in some localities by hunters who defy the law with impunity. With these men, nothing save the heavy hand of the law can be made effective.

JOSEPH ROUTIER,
J. DOWNEY HARVEY,
Fish Commissioners.

REPORT OF J. G. WOODBURY,

Superintendent of Hatcheries and the Restoration of Fishes, embracing the Operations carried out during the period between August 1, 1888, and October 1, 1890.

SAN FRANCISCO, October 1, 1890.

To the honorable the Board of Fish Commissioners of the State of California:

GENTLEMEN: After being appointed Superintendent by your honorable Board on the first day of August, 1888, I visited Lake Tahoe, where Mr. Frazier was in charge of hatching the six hundred thousand eyed trout eggs, which had been contracted for by your honorable Board.

These eggs were being hatched in a rented building, small and windowless, and consequently giving insufficient light to distinctly observe the condition of the fish in the troughs, which is a very essential matter, for cleanliness is a cardinal virtue in the successful hatching and rearing of trout, and an abundance of light is necessary to perceive what one is doing.

The supply of water to the hatchery on a hot day was very precarious, diminishing in quantity in the middle of the day, and with cattle tramping up the ground around the springs, and the rotten condition of the wooden pipes which conveyed the water a long way to the hatchery, made it a very uncertain business in hatching trout, and kept the attendant in constant apprehension of some mishap.

It seemed a reproach to the California Fish Commission to be compelled to do its work of stocking Lakes Tahoe, Donner, Independence, Webber, and the mountain streams in the vicinity with fish under such adverse conditions as these. And if it is thought of sufficient importance that these waters be stocked with trout, it should be done from year to year, continuously, for intermittent work of this kind—stocking these waters for a year or two and then skipping a year—is work almost thrown away.

It occurred to me that the State should select some favorable point for shipping, and build its own hatchery, commodious and well appointed, with a certainty of plenty of cold spring water, and make Lake Tahoe a trout-hatching station as a distributing point for all these mountain waters.

Mr. Frazier reported that he shipped the trout, resulting from these six hundred thousand eggs, in 1888, to the localities and in the numbers given in the tables which accompany my report to your honorable Board.

THE SISSON SALMON HATCHERY, 1888.

The Board of Fish Commissioners had received word from Mr. Livingston Stone, who was in charge of the United States salmon hatchery on the McCloud River, that he would deliver at the McCloud River Station, free of charge to the California Fish Commission, four million eyed salmon eggs for stocking streams in this State.

To take advantage of this generous offer on the part of the United States Fish Commission, I immediately, on my return from Lake Tahoe, started to look up a place on the headwaters of the Sacramento River for the erection of an extensive hatchery to accommodate this large number of eggs when hatched out. The necessary conditions for hatching out so many eggs, and the large trough space for nurseries to keep in good condition the young fish until they are old enough to ship, and a good sized stream of pure, cold spring water with no possibility of floods washing out the ditches or flumes that take the water to the hatchery, and with a right at all times to control a sufficient quantity of water for all purposes. It was also essential that the hatchery should be at a convenient distance from the railroad station and a telegraph office for convenience of shipping the fish to distant points; also, a point on the river, whence it was, owing to its accessibility, the cheapest, reach by wagon road the greatest number of the branches of the headwaters of the Sacramento River. For the shipping of even one million of young fish to distant points and properly distributing them over the nursery grounds is a costly and tedious operation.

After examining the Sacramento River for the best place in my opinion, I selected, with the consent of Mr. J. H. Sisson, a site in the field back of his barn about three quarters of a mile from the railroad station in the town of Sisson. The spot selected is well drained, sunny, and sheltered from the prevailing winds, and with an open view of old Mount Shasta.

The water for the hatchery comes from a large spring, about one and a half miles distant, which forms the extreme head of one of the branches of the Sacramento River. Its volume is sufficient to run a sawmill, and its temperature is 46 degrees Fahrenheit at all seasons. The main ditch from this spring runs near by the hatchery. It seemed to be an ideal place for a hatchery, and also most conveniently situated for distributing the fish to the proper nursing grounds. In the two years of experience since the hatchery was built, in hatching the millions of trout and salmon eggs, the expectations have been more than fulfilled. The waters seem to have a marvelous virtue in maintaining the health of the young fish as well as having a sparkling taste to the palate. The hatchery was built in expeditious haste to prepare it in one month for the reception of the expected salmon eggs from the September run of fish at the McClure River Hatchery.

The hatchery is a plain building forty feet by sixty feet, strongly built with a half pitch roof which has resisted the tremendous snows of the past winter. It has a capacity for forty-four hatching troughs sixteen feet long and sixteen inches wide. The troughs are made of one and one half-inch dressed pine, and are painted with three coats of asphalt varnish to prevent the wood from growing a fungus, which would destroy the young fish. A head trough sixteen inches square, prepared in the same way, runs the entire length of the building, sixty feet, which furnishes water through gates to the hatching troughs. A large filtering tank outside, and a flume about one hundred yards long, connect the hatchery with the main ditch. The hatchery has a system of troughs beneath the floor to carry off the water from all the hatching troughs to a waste ditch outside.

A room fourteen by sixteen feet, for the men to live in, was finished in the upper part of the hatchery.

SALMON HATCHERY AT SISSON, CAL.

Barton & Ray

INTERIOR OF HATCHERY AT SISSON.

INTERIOR OF HATCHERY AT LAKE TAHOE.

Each trough has screens and covers to protect the eggs from the light. One hundred and fifty wire hatching baskets were made and painted with asphalt varnish. It seemed to be an endless task to get this large hatchery finished. We worked every day in the week, and most of the nights until ten and eleven o'clock, painting the troughs, making the baskets, covers, etc., and fixing up the living-room. This work continued long after the first lot of eggs were received.

This hatchery is well equipped and is also one of the largest in the country. It has a third larger capacity than the United States Salmon Hatchery on the McCloud River, where fourteen million salmon eggs have been eyed at one time.

Before shipping the eggs, Mr. George B. Williams, Superintendent of the station at Baird, where the United States Salmon Hatchery is located, sent word notifying us of the date of shipment. The salmon eggs are hauled to Smithson, on the Sacramento River, where one of our men meets them with ice to be put in the packages to keep them cool. The State Fish Commission pays all expenses incurred on the shipment of eggs from the McCloud River to Sisson. The United States Fish Commission generously donates the eggs, eyed and packed, ready for shipment, from the Government Hatchery on the McCloud River.

We received at the Sisson Hatchery, from the September run, 1888, about eight hundred thousand salmon eggs, instead of the three or four million which were expected to be taken during that month. This caused a great surprise and disappointment, for ten years ago during the same month twelve million eggs were easily taken. This shows what havoc the fishermen with their nets are making in the lower Sacramento River.

This year, 1888, the United States Fish Commission renewed their operations on the McCloud River, that station having been abandoned during the previous five years. The eight hundred thousand eggs received from them were hatched out at Sisson, and kept till old enough to be planted, and during the month of December were distributed in branches of the Sacramento River, the West Fork, Salloway Creek, Big Spring Creek, Cold Creek, and in the main Sacramento below the eighteenth crossing.

The Government Station on the McCloud River did so poorly in the August and September run that they continued their efforts for the taking of more spawn during October and November. This had been unusual in former years, because they got all they required in the first run. Usually the McCloud River rises in volume during the fall rains, which makes it very difficult for the men to keep their traps in the river (as, for instance, during last year, 1889, when everything was swept away).

We received at the Sisson Hatchery from the October and November run, 1888, about two million two hundred thousand salmon eggs. The eggs arrived during the last of December and part of January, 1889. These were hatched out in fine condition, and kept till old enough to ship, and were distributed, in March and April, in the same streams as those of the September run; and, also, down the Sacramento River as far as Big Castle Creek. In shipping these fish down the river the Southern Pacific Railroad Company very generously loaned us the use of a hand car, and gave the right of way on their road. Without this accommodation it would have been almost impossible to have distributed the fish properly. With the good water at the Sisson Hatchery,

and the care they received from the attendants, Mr. James A. Richardson and Mr. E. W. Hunt, I venture to say that no fish were ever hatched out with a less percentage of loss.

In the fall of 1888 a contract was made with Mr. Livingston Stone, at the United States Hatchery on the McCloud River, to hatch out from the eyed eggs which the United States Fish Commission donated to the California Fish Commission, five hundred thousand young salmon at 75 cents per thousand, and distribute them in the McCloud River.

The United States Fish Commission also very generously hatched out and planted in the McCloud River the same season one million young salmon at its own expense; and, also, in 1889 the United States Commission planted eighty-four thousand young salmon in the McCloud River. More would have been planted there that year by the United States Commission, if the floods had not washed out the traps and thus prevented the taking of any more breeding salmon.

Mr. J. H. Sisson generously gave two lots in the addition to the town of Sisson, each thirty feet by one hundred and forty feet, for the use of the hatchery, for \$1 a year with the free use of the water; and, also, he signed a bond to give the Fish Commission permission to remove the buildings, or else buy the land at the market price, with a perpetual free use of all the water from Big Springs Creek which the hatchery should need. These lots should belong to the Fish Commission, with one or two more of the adjoining lots on the south included.

Mr. Dunn, the Controller, claims that under the present law the Fish Commission has no right to purchase land for its hatcheries. I would suggest that your honorable Board petition the next Legislature for a law to be passed granting the Fish Commission the right to purchase land for its hatcheries when a desirable locality has been fixed upon.

If the hatcheries do any good in maintaining the normal supply of food fish by restocking the streams, and if it is advisable to operate the hatcheries for a few years, it is equally important to maintain them for all time. The State consequently should own and operate its own hatcheries as a permanent institution.

As soon as the young salmon were all distributed (April, 1889), the hatchery was closed at Sisson for the season of 1888-9.

LAKE TAHOE.

Operations were now immediately begun at Lake Tahoe. The fishermen said that the month of May was too late a date on which to take spawn at Taylor Creek, which was considered the best place for getting the most spawn. But we managed by careful seining to get about one hundred and fifty thousand trout eggs here, which were put into the old private hatchery at Tahoe City. Taylor Creek is at the upper end of the lake, about twenty miles from the hatchery. Work was then begun on traps to be put in the creeks near their mouths. We had to wait for the lumber to be sawed out at Truckee and hauled over what was, at that time, a bad road. This delayed us somewhat, but as soon as possible we had traps in Meek's, Phipps', Blackwood, and Ward Creeks. Trout run up these creeks later than they do in Taylor Creek, for the reason that these streams are fed by melting snow water which is cold and often roily, while Taylor Creek has its source in Fallen Leaf Lake, which modifies the temperature of the small streams running into it.

In Meek's Creek the trout had been running some time before we put in our traps, and Chinamen had been catching them by torchlight, so the fishermen said. The run dwindled down very fast and we caught but few trout, but the traps were full of suckers.

In Phipps' Creek, which is later than Meek's, the trout had not begun to run when the traps were set; the water was very low. We caught here but very few fish during the season. Trout used to run up this stream in large numbers, but a trap had been kept here for years past to catch the fish, principally for the market, and I could not learn if any young trout had been planted in the stream to restock it in place of those which had been prevented from going up to spawn.

The next creek, Blackwood, is a larger and later stream for trout; in this creek we caught the greater bulk of our eggs. We had to continue trapping in this creek a long time—into August, in fact—when the water became very low.

In Ward Creek but very few trout were caught.

We also seined at the Incline in Nevada, by permission of Fish Commissioner Mills. Here formerly trout used to be caught in great numbers by the same fishermen who worked this season for us. This year, however, but few fish could be seined, while cart loads of sawdust were drawn in by the seine. The two streams which empty into the lake at this place were very low.

We took this season, 1889, about one million two hundred thousand eggs. It was expensive to keep the traps in for so long a time with men to attend them. Spawn taking had been continued through three months, while in an ordinary season, and to get two million five hundred thousand eggs, it was expected that the work of spawning would be done in six weeks. The cause given why so few fish could be caught was that it had been an open winter around the lake, scarcely any snow had fallen, and the water consequently in all the streams was very low. It is the melting of the deep snows in the mountains that cause the streams around Lake Tahoe to rise in April, May, and June. All the traps and seining grounds were at distant points from the hatchery. The eggs had to be brought around the lake on the steamer or in rowboats.

In the first part of this report mention is made of the old private hatchery, where the Commission was having trout hatched, of its inadequate qualities, of the insufficiency of water for hatching purposes, and the insecurity of supplying pipes. It seemed necessary that the Fish Commission of this State should have a hatchery of its own, sufficiently large to take care of fifteen hundred thousand trout, with a good supply of cold spring water.

A State hatchery at Lake Tahoe would be the most central, as a point of distribution, for the great Tahoe, Donner, Independence, and Webber Lakes, as well as the Truckee River and its branches, and also the headwaters of the different forks of the American River, and rivers farther south, rising at the summit of the Sierra Nevada Mountains—these latter being stocked with Eastern trout alone, while all the former could be stocked with Lake Tahoe trout, Eastern trout, and the land-locked salmon.

Lake Tahoe is of considerable importance as a resort for health and pleasure by tourists from the East, as well as large numbers of our own people. Boating and fishing are among its pastimes. Travel here must increase as our State becomes more thickly populated. All these waters

were well stocked with trout in former years, when the Truckee River was open to the passage of trout from Tahoe to Pyramid and Echo Lakes. The magnificent spawning grounds of the whole length of the Truckee River were then used by the trout to deposit their eggs. In almost countless numbers the trout made their way from Pyramid and Echo Lakes to Lake Tahoe. But since the dams have been built on this river no trout can get up to Lake Tahoe, and of late years trout have been diminishing above the lower dam very fast.

Taking all these things into consideration, I thought it best to build at Lake Tahoe a new State hatchery.

THE NEW STATE HATCHERY AT LAKE TAHOE.

Soon after arriving at the lake, and while the other work of seining and trapping was in operation, I began to look up a place to build, with the necessary conveniences for hatching and shipping. A spot near Tahoe City was selected, where there were some fine springs near the shore of the lake and quite close to the steamer landing.

No one could tell me where the owner could be found, or even what his name was. But in the hurry for a safe place to hatch the spawn which was being taken (the first few lots were placed to the old private hatchery, which was hired for the purpose), I had determined to build a temporary hatchery on the place selected, and trust to luck in finding its owner and buying it of him. So I ordered lumber from the mill at Glenbrook for the building, and had the hatching troughs made at the factory in Truckee. Wire for the hatching baskets was ordered from San Francisco. A man was put to work getting out sills for the foundation of the permanent hatchery. Other men were set to digging ditches to bring in water from the springs to a new reservoir to be made near the lake shore. As soon as the lumber and troughs arrived, a temporary roof was put up. Some of the troughs were painted and prepared for the eggs. After the troughs were in place, and the flume to the head trough finished, and the water was running in the hatching troughs, we brought the eggs from the old hatchery to our temporary new one. We felt much relieved now, for we could take care of the eggs as fast as they came in, and had the eggs which were in the old hatchery in a safe place—the old rotten pipe had already burst several times, and we had been harassed with fear of losing the eggs.

At this point of our work I started for San Francisco to find the owner of the place on which I wished to build the new hatchery. After considerable trouble and delay, I found the owner of the springs, and after making a bargain at a fair price for the land, and a guarantee to give me a month to search the title, I returned to Tahoe. We at once began work on the new hatchery, laying a strong foundation with heavy sills to bear up the weight of water and heavy winter snows.

The building is twenty-four feet by forty-two feet, strongly built, with a half-pitch roof. It has seventeen windows, which give abundance of light. The plan of the hatching troughs is like those at the Sisson Hatchery, with twenty-four troughs twelve feet long, and sixteen inches wide—with head trough and a large settling tank outside connecting with a flume, which brings the water down for about two hundred yards from the springs.

As soon as the building was ready and part of the troughs had been

placed in position, we transferred the baskets of eggs and young fish from the temporary hatchery to the new building; the remaining troughs were then put in place.

The troughs are well made, of sugar pine, and painted with two coats of asphalt varnish. A good supply of new hatching baskets, painted with varnish, and covers made for all the troughs.

The hatchery is well appointed, strongly built, and roomy.

It was necessary to do all this work as quickly as possible, and, in doing it, there were many vexatious delays. No supplies for the work could be obtained at Tahoe, except lumber in the tree. The shakes for the roof had to be made, the sills had to be hewn from the tree, and, as no teams get in there until the loggers arrive, we were much delayed in hauling the sills and shakes. The lumber had to be sawed and brought over on scows from Glenbrook, then rafted and got inshore as close as possible, then thrown into the water, pushed ashore, dragged out and packed up to the building.

Lake Tahoe is a very difficult place to collect spawn. The traps are all at distant points. In going to one on the steamer it takes all the next day to get back, as the steamer has to go round the lake to get home. To go to the traps off the regular route of the steamer rowboats must be used, which takes half a day to go the round trip. On many days the lake is so rough that it is not possible to go in a boat. We had a very busy summer's work; all hands were employed every Sunday, as well as through the week days.

Of the thirteen acres which were bought for the hatchery, the greater part consisted of wet land through which the springs flowed. This naturally produced the best feeding ground for cows. As soon as the grass began to spring up, about two hundred head of cattle were driven into the neighborhood of Tahoe City, and they made our springs their headquarters. They would wade in all through that soft ground among the alders, tramping it up, and the water in the hatchery would be black with mud, covering the eggs and thickly settling on the bottom of the troughs.

We had to endure this annoyance for weeks, leaving our work in the day time to drive them off, and watching the place till ten o'clock at night, till the wire for fencing ordered from Sacramento arrived, the posts split, the holes dug, and fence put up to protect ourselves from their raids.

Later in the season, when most of the fish were shipped and more leisure obtained, a line ditch was dug from the reservoir to the main spring, and a strong flume of two-inch planks was laid and covered up. This was to keep the water from getting heated upon a hot day. Also, a new house for quarters for the men was built, sixteen feet by twenty-four feet, with three rooms, boarded and battened outside and close boarded inside, making a strong, well built, and warm house. A new stove and housekeeping articles were bought. Our men did their own cooking after the first of August, the Commission furnishing the supplies, thus saving large board bills at the hotel.

After I had made a bargain for the land, your honorable Board sent me word that Mr. Dunn, the Controller, said that he had no authority to issue a warrant to pay for land for the Fish Commission. As the buildings were already begun, and as there was no other course to pursue but go ahead, I wrote your honorable Board that I would buy the land myself and rent it to the Commission at a nominal sum.

After the spawn was all taken, about the first of August, I sent Mr. Richardson to the city to begin shipping Black bass from the Spring Valley Water Company's lakes.

Mr. Hunt stopped at the hatchery till most of the young trout were shipped in the latter part of September. He then went to the Sisson Hatchery to receive the first lot of salmon eggs from the United States Hatchery on the McCloud River. I had already been up there (August), and painted the troughs with asphalt varnish, and turned on the water to soak them in readiness for the September run of salmon eggs.

I stopped at the Tahoe Hatchery, working on the house and flume most of the time until both were finished.

The fish being all shipped, the house and flume finished, several cords of wood got into the house for the next spring work, the hatchery was closed up on the last of October, 1889.

The distribution of this season's trout (1889) at Lake Tahoe will be seen on reference to the tables.

BLACK BASS.

Seth Green brought the first Black bass to California. These were brought out at the expense of a sportsmen's club, and placed in Temescal Lake, near Oakland. A few waters have been stocked from the young of these bass.

The second lot of Black bass was brought out by B. B. Redding, for the California Fish Commission, and planted in the Crystal Springs reservoir, near San Mateo, with the permission of the Spring Valley Water Company, for breeding purposes, with the privilege of shipping the progeny of these fish to stock the waters of this State.

The Black bass is a splendid game fish, fighting bravely and fiercely for its liberty, many anglers claiming that there is more sport fishing for them than for trout. They are also a delicious fish to eat. They will do well in almost any of our fresh waters, either rivers or lakes; they multiply very rapidly, and require no aid from artificial propagation. When waters are once stocked with them, they are to stay, if fair play is shown them. They should be protected for several years till the original stock has had a chance to breed two or three times, and afterwards no fishing should be allowed for several months during the spawning season. Like any other live stock, if breeders enough are not reserved, the stock will become diminished.

The Black bass, like Striped bass are ravenous feeders; they will devour the Sticklebacks, which almost all fish avoid on account of their spines.

Not many of our public waters have been as yet stocked with these fish. They should be, for when once they become stocked with Black bass it is done for all time.

Clear Lake, in Lake County, will make, when it has been well stocked with Black bass, a splendid and extensive resort for anglers. There is an inferior fish there which breeds in myriads, which will give grand feasting for Black bass.

It was thought to be high time that some systematic work should begin to stock all the waters of our State that are proper to plant with bass: Clear Lake, the Blue Lakes, Tulare Lake, Goose Lake, and many smaller lakes in our State, and perhaps the great Klamath Lakes. Probably it

would not be well to plant Black bass in Tahoe, Donner, Independence, or Webber Lakes.

The rivers Kern, King, and so forth, are admirably adapted for the home of this fish. I am not over confident that it would be safe for the young salmon to have the Black bass planted in either the Sacramento or San Joaquin Rivers.

The young salmon make the Sacramento River their highway from the nursery grounds in the McCloud and upper Sacramento Rivers to the ocean, and they would have to run the gauntlet of the Black bass if the latter were planted there. But the perch and the Sacramento River pike, which have always been there, would also be salmon eaters, if they could catch them. The question remains: Would the Black bass be any more destructive than their first cousin, the perch? At any rate, in time these fish will find their way into these rivers, clandestinely by private parties, if not done so openly by the Fish Commission. Russian River is, I understand, at present well stocked with Black bass.

Many applications have been made for Black bass to stock waters in different parts of the State. They have to be caught for shipment with hook and line. If they swallow the hook it is liable to injure them, and cause them to die while kept in confinement waiting for shipment, or on the journey to be planted.

When fish are shipped to private waters, the expenses of the journey, transportation, railroad fares, hotel bills, etc., are expected to be paid by those who make application for them. Fifty fish, such as would breed for the first time during the following spring, are sufficient to stock any reservoir or small lake. The number did not exceed twenty which were originally placed in Crystal Springs reservoir.

Mr. James A. Richardson, after leaving the Tahoe Hatchery, in August, 1889, began shipping the Black bass, making one trip to the waters near Oroville, for Senator Jones, one to Sweetwater reservoir, San Diego, and two shipments to Clear Lake. More shipments would have been made that year, but Mr. Richardson became seriously ill, and had to postpone the work.

SISSON HATCHERY, 1889-90.

The salmon hatching season opens about the latter part of September. Mr. E. W. Hunt, after leaving the Tahoe Hatchery, in September, 1889, went up to the Sisson Hatchery to receive the first consignment of salmon eggs from the United States Hatchery on the McCloud River. There were shipped of the August and September run nine hundred and seventy-four thousand salmon eggs, and of the later run in October and November, three hundred and fifty-five thousand salmon eggs. In all, for 1889 only one million three hundred and twenty-nine thousand eggs.

The reason why this small number of eggs (three hundred and fifty-five thousand) was received in the second run from the United States Hatchery, was because of the heavy early fall rains, which raised so great a flood in the McCloud River that it swept out all their traps, and put an end to all fishing for that season. This shows how important it is that the close season for salmon should be so definitely fixed that sufficient numbers of breeding salmon should reach the United States Hatchery in the month of September, so that a sufficient supply of eggs for artificial hatching could be caught at that time to supply the young for stocking the rivers of our State, and not depend upon the late fall

run, which is so uncertain on account of the liability to floods, which makes it impossible to secure the salmon.

The young fish from the first run of salmon eggs were compelled to be kept, on account of the furious snowstorms of the past winter, till in February and March, of 1890, and then distributed, the boys using snow shoes and hauling them out on handsleds. The second run was kept till March and April, and was distributed, same as the first lot, in the Sacramento River and its branches. Many difficulties had to be encountered this year, owing to the great snowstorm. For weeks there was almost continuous shoveling of snow, to keep it away from the windows of the hatchery, to obtain some light to enable the attendants to see to do their work.

The young fish had to be put on short rations during the great snow blockade, on account of the scarcity of meat.

EASTERN BROOK TROUT.

The Eastern Brook trout, with its brilliant scarlet spots, mottled green back and lower fins red and fringed with white, is one of the most beautiful fish in the world. It is gamey and has a delicate flavor.

Our first Board of Fish Commissioners thought they would be a valuable acquisition to our trout streams. They introduced the eggs of these fish from New Hampshire in 1876; these were hatched out and distributed from their first hatchery on the University grounds at Berkeley. They continued the introduction and hatching of these fish for several years. The fish were distributed in many hundreds of thousands into the streams of Alameda, Marin, San Mateo, Santa Cruz, Santa Clara, and Monterey Counties; also, in the high Sierra Mountains, above the falls of the Yosemite Valley, on the headwaters of the Yuba and North Fork of the American River, Prosser Creek, a branch of the Truckee River; also, in Cold Creek, at Sisson, a small branch of the headwaters of the Sacramento River. In all these short coast streams, which become warmer and diminished in volume as the summer advances, they have not reproduced themselves—at least, I cannot learn that any have been caught for a number of years past; but in all the high Sierra streams where these trout were planted, they can now be caught quite plentifully. The integrity of their characteristics in all their virgin beauty is maintained. A number of these fish were caught during the past summer in Blackwood Creek, Lake Tahoe.

About four years ago a few of these fish were planted in a small lake on the mountain side back of McKinney's place, Lake Tahoe. Last year Mr. McKinney told me that a number of Eastern trout had been caught in that little lake, one of which weighed three pounds. He said they were fierce fighters, and had a delicious flavor. Some of these Eastern trout have been caught thirty miles down the river from the place where they were first planted in the North Fork of the American River. It seems to me very probable that the Eastern Brook trout, as they become older and larger, will drop farther and farther down the main stream and ascend other branches to spawn, and, thus becoming acclimated, will gradually stock all the streams in the State accessible from the first stream in which they were planted. From the Tahoe Hatchery, Lake Tahoe: Fallen Leaf Lake and the streams which empty into these lakes, the numerous small lakes on the mountain sides, the

Middle and South Forks of the American River, as well as the headwaters of other rivers farther south; also, the North Yuba and Feather Rivers could be stocked with these Eastern Brook trout.

From the Sisson Hatchery, these trout could be planted in the headwaters and branches of the Upper Sacramento and McCloud Rivers, and also in the headwaters of the Trinity and Klamath Rivers.

It seemed to me to be such a public good that these trout should be systematically planted in all these mountain streams, so that anglers could catch these speckled beauties during their vacations for health and pleasure, that I asked of your honorable Board permission to buy one hundred thousand Eastern Brook trout eggs. They were shipped from Mr. Livingston Stone's trout hatchery, Charleston, N. H. These eggs were hatched out during the past winter at the Sisson Hatchery. From these eggs, which came about four thousand miles, we got about eighty thousand of fine, healthy trout; these were kept in the hatchery for several months waiting for the snow to melt so that the roads could be opened to the McCloud River and other places. As soon as these fish could be shipped, about thirty thousand were planted in spring brooks which feed the upper McCloud River, near the Horseshoe Bend at the eastern side of Mount Shasta. Twelve thousand were planted on the application of Senator Stanford in Deer Creek, a fine stream which rises in the Sierra Nevada Mountains and empties into the Sacramento River, near Vina. The balance of the trout were planted in the West Fork of the Sacramento River, and also in School House Spring and Kaiser's Creek, branches of the upper Sacramento River; also, in the headwaters of the Shasta River, Griffin's Springs, Wadsworth Springs, Big Springs, and in Shovel Creek, branches of the Klamath River. The Eastern Brook trout cannot but do well in all of these places, as there is plenty of food and the water is cold. I consider that it is worth all the expense and trouble many times over to have the famous McCloud River stocked with these fine fish. In order to get these waters well and permanently stocked with these fish, several years of continuous stocking should be done.

TROUT HATCHING AT SHOVEL CREEK, 1890.

There had been complaints because no trout had been planted in the vicinity of the bay of San Francisco during 1889, but as a food fish was of the first consideration, a hatchery large enough to accommodate the donation of salmon eggs from the United States Government had to be erected. The Tahoe Hatchery was built during the next spring and summer, and the season's work carried on there. This work was all done in hot haste, and, with shipping the Black bass, we had no time to spare. Our help was all engaged and the money getting short.

To ship trout from Tahoe to streams around the bay would take at least four days' time, and the trip is very expensive, nearly \$100 a trip.

These two large hatcheries, with appointments and quarters for the men, with the large number of salmon and trout distributed, were paid for solely from the regular appropriation.

To meet the wants of the anglers in having the streams stocked with trout, I began to prospect early in the winter of 1889 for a station where the Rainbow trout could be caught in sufficient numbers to make it an object to build a small hatchery, eye their eggs and then ship these eggs

to the Sisson Hatchery, hatch them out and from there ship the young fish to stock the streams of the State as well as possible.

The Shasta River, in Siskiyou County, had been famous for its great numbers of trout. I looked at that and made close inquiries, and found that but few trout run up that stream now in comparison to the great numbers that formerly did so. And no wonder, for the water has been taken out of that river for years, and from the famous springs which help to supply its volume of water, through open irrigating ditches, with no screens to keep the trout from being drawn in and distributed through the grass to die. A gentleman, who formerly owned a farm near Edgewood, told me that he had found fully thirty thousand dead young trout, which he discovered in holes after the water in his ditch had been turned off. This number is one instance. Now, taking the same ditch through the whole season and adding this to the other ditches in Shasta River Valley, and the numbers of trout destroyed in this way would amount up into the millions.

I also heard of the Shovel Creek, at the Klamath Hot Springs, as a wonderful trout stream. I visited that place, and received the generous permission of the Edson Brothers to trap that stream for trout spawn and establish a small hatchery on their grounds. I was told, however, that but few salmon and trout had made their appearance there during the preceding fall, on account of the dam which had been put in at Klamath City. It had been complained of, and a small fish ladder had been put in, large enough for a small stream, but a wee thing for such a roaring river as the Klamath, with its immense volume of water pouring through the sluiceways with such force that a trout could not stem the current. The fish ladder, with its minute quantity of water, was away at the end of the dam, next the bank, where only a straggling trout or salmon would find its entrance.

I felt discouraged at the prospect of finding a good place for a trout hatchery. The heavy storms drove me home, but as soon as the snow blockade was broken I went up to that region again, and found that the elements, although fierce, had been propitious to trout, which by instinct were compelled to seek the upper Klamath for spawning beds, for the great volume of water, higher than ever known before, had ripped out the dam at Klamath City, and the trout had an unobstructed highway.

I immediately began, early in March, 1890, fitting up a small building, which Mr. Edson loaned me, with hatching troughs flumed in the water, and began building traps for Shovel Creek. The hatching baskets for trout eggs had been built at the Sisson Hatchery during the winter in anticipation of using them there.

Shovel Creek is quite a large stream which empties into Klamath River, within the grounds of the Klamath Hot Springs Hotel. Many of the trout which were spawned would weigh two and one half pounds.

After getting the hatchery in working order and a few thousand trout spawn taken, leaving Mr. Richardson in charge, I went to the Sisson Hatchery and left Mr. Stewart in charge to distribute what salmon were left, to look after the Eastern trout which were being kept until the roads would be open to ship part of them to the McCloud River, and also to receive the trout eggs which were to be sent from the Shovel Creek Hatchery.

TAHOE HATCHERY, 1890.

I now proceeded, accompanied by Mr. Hunt, to Lake Tahoe to open the spring campaign there. The road not being open from Truckee, we had to go up by way of Carson.

On arriving at the hatchery, our house we found buried in snow—it had been twelve feet deep on a level, but in places the wind had drifted it to a great height. After putting new wings to the bag of the old seine, we hired the steamer Tod Goodwin to take our traps, seines, boats, bedding, and provisions up to the mouth of Taylor Creek, twenty miles at the uppermost end of the lake. The steamer also towed up the scow Lillie Van, which was already fitted up with rooms, stove, and cooking outfit. This scow we hauled into the stream: it was to be our home while seining in the lake at the mouth of the creek. The seine was hauled three times a night: once just after dark, again about midnight, and once again before daylight. Some of the nights were so cold that the seine would freeze stiff five minutes after it was hauled out of the water. A bonfire burned while hauling the seine, casting its light over the water; the boatmen could thus see what ground to go over in paying out the seine and rowing in.

They would catch at one haul from five to ten, fifteen, or twenty trout, a few times more and sometimes not any; and many nights the seine could not be hauled on account of the rough sea. A great many Suckers were caught, sometimes as many as three hundred pounds weight at a haul. Some Whitefish were also drawn in. The Suckers were so plump that it was thought they must be full of trout spawn; twelve were opened and not an egg was in their stomachs; but the Whitefish, although small, were full of trout eggs.

The seining continued here some time, till no more trout could be caught. Mr. Burton and I went up the creek to the dam, but we did not see half a dozen trout.

The trout we caught were nearly all ripe; only about seven hundred thousand trout eggs were got at this place. Mr. Burton and Mr. Sam Nichols, who had fished in the lake many years, had prophesied that we would get here all the spawn we wanted.

The seine was drawn through the spring and summer at Meek's Bay, Blackwood Creek, and at the Incline, in Nevada. Traps were put in at Meek's, Phipps', and Blackwood Creeks. The creeks were so high, especially on a hot day when the sun would melt the tremendous snows of the past winter which fell on the headwaters in the Sierra Nevada Mountains. The streams would rise in a tumultuous volume of icy, roily water, which made it very difficult to put in the traps; and after a trap had been put in Blackwood Creek, the water rose two feet over all, tearing the trap out. The trap was put in again, but it was a trying work for the boys: Hunt, Will and Joe Shebley, who, after working in that icy water all day, slept on the banks of the creek in their wet clothes. Fishing was continued up to about the last of July, when the traps were all taken out.

There is usually a large run of trout up Blackwood Creek in March. Some time after we got up there a gill net was set in the current outside the mouth of Blackwood Creek, and nineteen fish were caught, weighing over two hundred pounds—one weighing a little over sixteen pounds. These were towed behind a rowboat, tandem fashion, for about five

miles, by putting a line through the sides of their mouths and fastening it to a toggle of wood; these fish pulled back with the strength of a donkey; they were not ripe, and were put in the settling tank. On the following day, when Will was away on the steamer to Taylor Creek for spawn, six of these large fish were stolen.

The gill net was set every night afterwards for awhile, but the run was over and only a few more were caught. Some of the fish were spawned, and turned out about five thousand of fine looking eggs each.

The past winter was the hardest ever known here, and the snows the deepest. Those who lived at Tahoe said that it snowed almost continuously all the winter. The streams have been booming with icy water all the summer. For some cause but very few fish run up the streams. The fishermen said that the season was a month late, and that the fish would run up by and by; but it was not to be. They all said that the fish must have spawned in the lake. Lake Tahoe was as low as ever was known last fall, and since then it has risen about six feet, being about as high as ever was known; it has also been unusually rough this summer.

A new wharf has been built near the hatchery; a second-hand boat has been bought, and also a scow for seining and for shipping cans of fish. A great many tourists have visited the hatchery, and expressed their admiration of what they see outside of the hatchery as well as inside.

BLACK BASS, 1890.

About August first Will Shebley left the Tahoe Hatchery to go to San Francisco to begin shipping Black bass, leaving Mr. Hunt, who has had charge of the Tahoe Hatchery, with Joe Shebley to distribute the trout now on hand there. After the Tahoe Hatchery is closed for the season, Mr. Hunt will go below and help distribute the Black bass and trout from the Sisson Hatchery. Mr. Richardson will ship trout till the salmon hatching season opens, in the last of September, when he will be stationed at the Sisson Hatchery. The Black bass which we are catching now from San Andres reservoir are from six to nine inches long; these will probably spawn next spring. Seventy-five to one hundred of this size is all one man can conveniently and safely handle on a long journey.

This year, 1890, shipments have been made as follows: One to the Del Monte reservoirs, at Monterey, for the railroad company; one to the Blue Lakes, in Lake County; one to Clear Lake (two shipments were made to this large lake last year); one to the Pajaro River, near Sargent's Station; and one to a lake near San Luis Obispo.

Black bass distribution will continue this fall till as late as possible.

RAINBOW TROUT AT SHOVEL CREEK HATCHERY, 1890.

Trapping in Shovel Creek continued till about the first of July. The water was unusually high, on account of the deep snows on the mountains. About one million six hundred thousand eggs of the Rainbow trout were taken and eyed there; of these, one hundred and thirty thousand were hatched out and distributed in Shovel Creek—this was to give back the seed for the future from the harvest of eggs which we had gathered there.

One hundred thousand eggs were shipped to the North Pacific Game

and Fish Club, and were hatched out by Mr. A. V. La Motte, at his hatchery in Glen Ellen; and which, he writes me, were distributed in Sonoma and Robinson Creeks, in Sonoma County and Mendocino County, respectively. This club, by permission of your honorable Board, trapped Sonoma Creek last winter for spawning trout, and Mr. La Motte reports that fifteen thousand native trout were restored to that stream.

One hundred and fifty thousand eggs were shipped to Mr. Alex. Badlam and hatched out in his trout hatchery at Arcadia, near Mount St. Helena. These were—part of them—for his ponds, and the rest, Mr. Badlam writes me, were distributed in streams, as follows: In Sulphur Creek, near the Geysers, in Sonoma County; in Lokonoma Creek, Anderson's Creek, Grizzly Creek, and Bradford's Creek, in Lake County; in Bear Creek, near Arcadia, and Troutdale Creek, Napa County. Mr. Badlam trapped Bear Creek last winter for spawning trout (with permission of your honorable Board), and reports that he restored to that stream fifteen thousand native trout as the result.

Fifty thousand eggs were shipped to Mr. Knowles, who has a hatchery near Alma; these were hatched out all right, but by some mishap they did not do well. I shipped a second fifty thousand to him, with which he had good success. These were distributed: about twenty thousand in Bear Creek and Deer Creek, branches of the San Lorenzo Creek, in Santa Cruz County; the balance was divided between his own ponds and a branch of the Los Gatos Creek.

Fifty thousand eggs were shipped to the hatchery at the Hotel Del Monte; this lot did not do well through want of experience and the high temperature of the water, owing to its being so low in the reservoir from the main pipe having washed out last winter. I shipped a second fifty thousand eggs there; they hatched out, and, with more experience on the part of the attendants, did well. These have been distributed in their reservoir and in the Carmelo River.

The hatching out of these eggs sent to private hatcheries, their expressage from Shovel Creek, and the distribution of the young trout, has been done free of expense to the Commission. This saved to the Commission the cost of distribution of the young fish from the Sisson Hatchery, which would have been a large item, and was also the means of stocking many streams which would otherwise have been impossible this year.

I visited the Del Monte Hatchery several times, Mr. Knowles' hatchery twice, and Mr. Alex. Badlam's hatchery once, to give instructions.

Hon. A. R. Williams, Ramen Wilson, and a number of other gentlemen have made arrangements to build a trout hatchery at Webber Lake for the purpose of maintaining the supply of trout in that and Independence Lakes and in the streams in their vicinity.

The thanks of the Commission and of the people of the State are due these gentlemen for their unselfish interest and laudable efforts in behalf of the fishery interests of the State.

I am satisfied that the efforts of these gentlemen will meet with every success, and that they will at all times receive the encouragement and support of the Commission.

Fifty thousand of these Rainbow trout eggs were shipped to the State Hatchery, at Tahoe, on application of Commodore Todman; these were

hatched out and planted in the Truckee River below the dam at the outlet of Lake Tahoe.

The balance of the eggs, about one million, was shipped to the Sisson Hatchery; these eggs and the young fish did finely in the cold water at Sisson. They have been fed in the troughs for several months awaiting shipment.

After the eggs were all taken at Shovel Creek, Mr. Richardson began shipping these fish from Sisson for distribution, taking ten cans at a trip, and about three thousand fish in a can, or thirty thousand to each trip, which are as many as it is safe to handle on a trip in hot midsummer, the round journey averaging about eight hundred miles, and taking about three days' time.

A trip with this number has been made to Lagunitas Lake, Marin County, and to about five miles down the Lagunitas Creek, below the dam; also, to the following places: to Crystal Springs Reservoir, San Mateo County; to Alminitos Creek, near the New Almaden Mines; the Guadalupe Creek, Saratoga Creek, and to Smith Creek, near Mount Hamilton, a branch of the Calaveras Creek; to the Arroyo Mocho, twelve miles south of Livermore, and the Calaveras and the Alameda Creeks, near Sunol; to Monterey County, for branches of the Salinas River, near Salinas and Soledad; to Boulder Creek and other branches of the San Lorenzo Creek, in Santa Cruz County; to Almar for the Los Gatos Creek, in Santa Clara County; to the San Gregorio Creek, over the mountains from Redwood City; to Gilroy, for the Uvas Creek; to the Lagunitas or Paper Mill Creek; to Napa City, for branches of the Napa Creek; and to a small creek, near Santa Rosa, a branch of the Russian River.

Arrangements have been made to ship these trout to Dr. Smith, of Placerville, for the American River; also, to Judge McD. R. Venable, in San Luis Obispo County, for streams there; to the Sonoma Creek, Cache Creek, in Yolo County, and other places. We shall continue to ship these trout until their trough room will be needed for the salmon at Sisson, or until we are admonished to quit shipping to save funds for our winter and spring work. These which are not shipped to the central and southern parts of the State, will be planted in the Sacramento River. There have been already planted during August, 1890, in branches of the Sacramento, one hundred and fifteen thousand, distributed thus: West Fork, Sulloway's Creek, Cold Creek, School House Spring Creek, and near Peter Klink's place. The balance for the Sacramento will be distributed below the eighteenth crossing.

During both seasons of our work at Lake Tahoe, in 1889 and 1890, Commodore Todman has been exceedingly generous in his aid to advance the work of the Fish Commission by giving at all times free transportation on the steamer Tod Goodwin to all parts of the lake, shipping our racks for traps, fish cars, seines, towing the boats to the different streams, shipping our supplies, and also giving almost daily passage for the men in their traveling to the creeks where the traps were, for eggs, and in shipping the trout for distribution.

Captain Wherman and his men on the Tod Goodwin have also been very kind and willing in helping us, by doing many errands at distant points of the lake. Mr. Lawrence, of the Tallac House, and Captain Holt, also generously gave us free passage on the steamer Tallac. The citizens around the lake gave us many accommodations.

It would have been impossible for the Department of Hatcheries and the Restoration of Fishes to have done with its small funds the amount of work it has accomplished without the generous help which the Southern Pacific Railroad Company has extended in giving an annual free pass to the Superintendent to all parts of our State in his frequent trips to the hatcheries from San Francisco; also, in giving free passage in the baggage car for the salmon and trout eggs and all the cans of trout in the many shipments for distribution from the Sisson Hatchery, in the shipments of Black bass, and free passage for the attendants with the fish. The railroad people were very kind also in giving us the use of a handcar and right of way on their road in shipping the young salmon down the Sacramento for distribution. I would like to give an instance in which the railroad people have shown their kindness to the Fish Commission, and at the same time show why but few salmon have been up the Sacramento to spawn during the fall run for a long while past.

I was told by different parties that at a point on the Sacramento River, near the railroad tunnel No. 3, there was a horseshoe bend in the river; through the neck of this bend a mining company, years ago, had made a tunnel to drain the river in the dry season, so that they could mine the bed of the river around that bend. In August and September, when the salmon make their great migrations to their spawning beds, it was noticed that for years past but very few salmon made their appearance in the Sacramento River above the bend, while in early times the salmon went up in thousands.

In August and September the river is very low, and most of the water went through this tunnel, leaving so little water in Horseshoe Bend that it was almost impossible for the salmon to make their way up, while they congregated in thousands at the lower end of this tunnel, where the volume of water came through with such force, and made such a jump off into the river below, that the fish could not get up. Here the Indians, and also white men, would assemble, and while the salmon were using up their strength in continually making ineffectual efforts to leap up into the tunnel, they would destroy them with grab hooks and nets. This point is but a little way above where the Pitt River joins the Little Sacramento.

I determined to stop, if I could, this destruction of salmon and give them a chance to get up on their spawning grounds and deposit their eggs. I went down to this tunnel and made an examination, and saw at a glance that the railroad people—with their ties and old bridge timbers, with their handcars to carry them to the tunnel, and the crews of road repairers to do the work of putting in the timbers to face the tunnel, and blasting down the overhanging bank to fill up the open cut—could do the work much cheaper than I could. So I called at Fourth and Townsend Streets and told my story to the railroad people, showing the importance of this tunnel being closed up, that the salmon now being stopped there might not be hindered in making their way up the river to their spawning grounds; and asked them if they would not, as a great favor, have this job done by their men and send in their bill of expenses to the Fish Commission. They readily assented to have the work done, and, at the same time, said that if it did not cost too much, no charges would be made. In a short time they had the tunnel closed (1889), but, owing to the great pressure of the waters in the floods of the present year, 1890, the dam at the tunnel was torn out.

During the past summer it has been closed again, and the salmon will now have an unobstructed highway up the river.

The Fish Commission is also under obligations to the San Francisco and North Pacific Railway for free transportation, and also to the North Pacific Coast Railroad, both giving the use of their baggage cars and free passes for the attendants over their lines in shipping trout and Black bass for distribution.

I wish here also to acknowledge the many courtesies and aid extended to the Fish Commission by the many applicants for trout and Black bass, who have furnished teams to transport the fish and attendants from the railway station to the streams for planting; also, to Mr. J. H. Sisson for the use of the ground and the water for the Sisson Hatchery, and to the Edson Brothers for the use of the ground for the Shovel Creek Hatchery on their hotel grounds, and the privilege of trapping Shovel Creek for trout.

HAT CREEK.

I visited Hat Creek to see what advantages the State Hatchery there offered for hatching salmon. The hatchery at Hat Creek is a large building one hundred feet by forty-six feet, with sixty-four troughs sixteen feet long and twelve inches wide. The building has settled at its upper end owing to poor underpinning; the troughs have the grade the wrong way. The dependence for water is from a ditch owned by private parties, who use it for running machinery. The water comes through the ditch from up Hat Creek, and the ditch is dug through a formation of infusorial earth which is disintegrated by frost, making it very loose and friable; it crumbled into the water in the ditch, and was held in suspension in such quantities that it covered up the eggs in the hatching troughs.

The proper way is for the Commission to have entire control of the water for the hatchery. Copartnership in a ditch causes trouble, and the water is liable to be turned off entirely from the hatchery, which would cause, if it lasted for a few hours, the entire loss of all the fish and eggs. The water could be brought into the hatchery by an undercurrent wheel built in Hat Creek, near the upper end of the hatchery, which would give a large quantity of clear, cold water, and would, if built strongly, give a certainty to the continuousness of the supply; for Hat Creek never rises, as I have been informed, over eight inches above low-water mark. Hat Creek has a large volume of water at all seasons.

I think the more suitable place for the hatchery would be at the confluence of Hat Creek with Pitt River, on a point of land about two miles below the present site of the hatchery, where a large spring flows of clear, cold water; and as it is at the lower end of a fall or riffle in Hat Creek, a ditch of short length could be cheaply made to bring water for ponds. Opposite, and close at hand, is a seining place in Pitt River, and at this point, also, in Hat Creek, a trap could be built, as well as in Pitt River, to trap salmon and trout for spawners. The hatchery and spawning traps would be close together, which is of great importance for accommodation and security. (Fourteen years ago, when the old Board of Fish Commissioners gave me instructions to survey the Pitt River Falls, I selected this place as the most suitable for a salmon hatchery, if one ever should be built on Pitt River.)

There are not many salmon running up Pitt River, it is said, but if these

were caught and spawned, and the numbers supplemented by eyed eggs sent from the United States Hatchery on the McCloud River, a plant of two millions could thus easily be deposited in Pitt River and Hat Creek, which would be good nursery grounds for these fine fish to increase their numbers on the fishing grounds of the lower Sacramento River.

THE CLOSE SEASON FOR SALMON.

To prevent any depletion of our rivers, while the present great draft upon their fish supply is going on, to meet the demands of the canneries and the local markets, it is necessary that a sufficiently large number of young salmon should be hatched out naturally as well as artificially. It will be impossible to keep up the supply of salmon from artificial hatching alone for this reason, that the nursery grounds, which are accessible to distribution of the young salmon that are hatched artificially, are not extensive enough to meet and fully supply this great demand. We must have the aid of the salmon of the spring run to supplement our efforts, by stocking the highest mountain streams. The young salmon should be placed upon a great extent of nursery grounds for food and protection, to keep up the supply of mature salmon to return from their stall feeding in the ocean.

In order that this may be successfully accomplished, it is essential that the close season for salmon should be sufficiently long to give a free highway to enough breeders to ascend to the extreme headwaters of the salmon-breeding rivers to deposit their spawn over a large extent of nursery grounds beyond where teams can go to distribute cheaply the young fish from artificial hatching.

There are two great runs of salmon up the Sacramento River: one in March, April, and May, and another in August and September; but salmon are caught in considerable numbers during every month in the year.

RUN OF MARCH, APRIL, AND MAY.

It is very essential that a close season of two or three weeks in the month of April be enforced, in order to give a clear road for the passage of a part of the cream of the great run of the salmon in March, April, and May. It is the salmon from this run which reach the upper waters of our rivers, where they are almost inaccessible to man. Especially is this the case on the McCloud River. Above the United States Salmon Hatchery, which is about two miles from the confluence of the McCloud with the Pitt River, there are only four white men and but few Indians; and above the last white man on the river, eight miles beyond the United States Hatchery, for some sixty miles, till you reach "Horseshoe Bend," there is scarcely a soul to be found, when the spring run of salmon go up, to "molest or make them afraid" when passing through this long reach of the best salmon-breeding river in the world.

It is a fact well known to fish culturists that the winter and spring runs of salmon, during the high, cold waters, go to the extreme headwaters of the rivers if no obstructions prevent, into the highest mountains.

They are in the very best condition when they start on their long journeys. Nature has implanted in them the instinct to begin their journey while the spawn is yet small, that it may not become full grown

and ripe for depositing until they reach their far-distant spawning grounds.

As they eat nothing while on their journey up the rivers, and with their fighting and exertions to overcome this distance, a great deal of the way being through a swift, racing current, and also with a constant draft upon their own vitality to mature their spawn, they become much exhausted and emaciated.

These fish cannot be used for spawning artificially, for at this season the waters are too high to catch them, and they are too unripe when they pass the United States Hatchery on the McCloud River to catch and impound them; in the attempt to keep them till they become ripe they would all die before they were ready to spawn. They will kill themselves if kept long in confinement, in their frantic efforts to get free to ascend to their spawning grounds.

THE CLOSE SEASON FOR THE AUGUST AND SEPTEMBER RUN.

The spawning time at the Government Hatchery on the McCloud River for the great run of salmon in the late summer and fall is principally during the month of September; it usually opens about the twenty-eighth of August and continues until the latter part of September.

The vital points of the question in considering the time for the close season are: At what time should the close season begin at the fishing grounds on the lower Sacramento River, and how long should it last in order that enough breeding salmon from the great run during the months of August and September may reach the United States Hatchery on the McCloud River, during the month of September, to furnish sufficient eggs for the artificial hatching of young fish for distribution on the nursery grounds to maintain the supply of mature salmon for food, which the rivers for nursery grounds and the ocean for feed till the salmon are matured, are capable of producing?

Ten years ago, during the administration of B. B. Redding, S. R. Throckmorton, and J. D. Farwell as Fish Commissioners, as many as fourteen millions of salmon eggs were taken during the month of September from the fall run of salmon.

The close season at that time was during the month of August.

The close season is now, and has been for some years since, during the month of September.

The Government Hatchery, on the McCloud River, renewed its operations in 1888. The number of eggs taken in September, 1888, was only about one million five hundred thousand; and in 1889, only about one million one hundred thousand eggs: or, averaging for the two years, less than one tenth as many eggs as were taken ten years ago, when the close season was during the month of August. This is a loss of 90 per cent.

For what cause, or by whose agency the close season was changed from the month of August to the month of September, I do not know. It was certainly a very disastrous change, if the interests of the salmon were considered.

During the last Legislature, in 1888, a bill was introduced by some one—from Solano County, I believe—to change the present close season for salmon from the month of September to the month of October.

If this bill had become a law, the close season would have been

pushed entirely beyond the season of the great run of salmon. "Give them an inch and they will take an ell," if they can get it.

It is of the utmost importance that the close season should be placed back again to the month of August. If more salmon do not reach the McCloud River during the month of September than have arrived there during the past two years, serious consequences will happen to the salmon industry of California.

By changing the close season for salmon back again to the month of August, it can easily be determined if the run of salmon has lessened during the past ten years.

If as many salmon do not arrive there during August and September as did ten years ago, or if an insufficient number got up during that period from which to secure the number of eggs necessary for artificial reproduction, then it will be imperative to include part or the whole month of September in the close season, in addition to the month of August.

I see no reason why this change should have been made in the close season, unless it may have been to accommodate the canneries and fishermen on the lower Sacramento in securing greater catches of salmon.

If there is any accommodation to be done in the matter, it should be towards the salmon which are trying their best to reproduce themselves in the effort that their kind may not be diminished, and not to those who are doing their best to destroy the salmon for the future that they may fill their pockets to-day, and "kill the goose that lays the golden egg."

Can it be possible that the people of this State will allow a great resource of food supply, which Nature has planted in our rivers, to be endangered by the remorseless destruction going on in the effort to catch every salmon that attempts to go up to the spawning grounds?

The following valuable communication has been received from Mr. Geo. B. Williams, Jr., and I take great pleasure in submitting it to the consideration of your honorable Board, as it so strongly represents the facts of the case:

BAIRD, CAL., July 8, 1890.

Mr. J. G. WOODBURY, *San Francisco*:

DEAR MR. WOODBURY: Yours of the fifth at hand. Two years of experience in charge of this station on the McCloud has convinced me that unless some action is taken by the Legislature and those interested in the propagation of salmon as a food fish, to include the month of August as well as that of September in the close season, not many years will elapse when this valuable food fish will become almost extinct.

On account of the high water we are liable to have at this point during the spring and late fall runs, it is impracticable to secure and spawn by artificial methods the parent fish; but the August run comes at a time when it can be handled successfully. In order to allow this run to reach the headwaters of the Sacramento River and its tributaries, the months of August and September should be reserved to allow a free passage of salmon.

I draw my conclusions from the fact that in previous years, when there was no fishing with seines in the Sacramento to speak of, thousands of salmon collected here during the latter part of August and during the month of September, and we found no difficulty in securing all the eggs we could handle, fourteen million ova having been taken in one season. From the August run in 1888 but one million five hundred and sixty-eight thousand six hundred eggs were secured, and in 1889 one million one hundred and five thousand were taken. In 1888 the season's take was increased to five million five hundred and four thousand six hundred, by securing ova from the late run in October and November. But this was something unusual, and could not have been accomplished had it not been that the rains did not set in until December of that year. An attempt was made in 1889 to take the late run, but rains in October caused the McCloud to become very high, and racks and dams were washed out, allowing the parent fish to ascend the river and small creeks above the station.

It is very hard to decide how long it takes the salmon to reach their spawning grounds after they leave the seining grounds of the lower Sacramento, but as near as we can tell, from two to three weeks.

As you know, the work done at this station is almost entirely for the State. It seems as if it should be the aim of the people to do all in their power to aid the United States Fish Commission to accomplish its object by making laws that will protect this valuable food fish.

Much more could be said regarding the tremendous decrease in late years of the salmon, but I think I have advanced sufficient reasons to show that a longer close season is necessary to make a success of our work. It is a question that should be seriously considered and acted upon at once.

Yours truly,
(Signed:)

GEO. B. WILLIAMS, Jr.,
Superintendent of Station.

STRIPED BASS.

There were brought to this coast in 1874 some one hundred and fifty Striped bass, about one and one half inches in length. From these quite a number of mature fish were caught in years afterwards, but it was not certain that they had reproduced themselves, and it was thought best to have another shipment of these fish brought out to this coast, to make it as sure as possible that these excellent fish should become familiar in our waters.

By instructions of the Board of Fish Commissioners, B. B. Redding, S. R. Throckmorton, and J. D. Farwell, in 1882 I brought out from the Shrewsbury River at Red Bank, New Jersey, just above Monmouth Park, a shipment of Striped bass, running from five to nine inches in length, and planted them in Suisun Bay, at Army Point. Quite a number of these have been caught from year to year, increasing in weight every year. Last year several were caught weighing over twenty pounds, and during the past winter one was caught weighing thirty-five pounds.

I have been watching for the young fish, the progeny of those brought out in 1882, and during the past spring, on my return from a trip to Tahoe Hatchery, I heard that they were being caught by the thousands and offered for sale in the market. I hurriedly went up to the market to see if it were true. I found there a lot still unsold, averaging from one half to three quarters of a pound in weight. I was delighted to see them, knowing that those brought out from New Jersey must have kept together in the muddy waters of our bay till they matured and spawned, and their young had been successfully reared.

But knowing that the young Striped bass run in schools, I became alarmed lest the many Chinese nets in our bay and the lower Sacramento and San Joaquin Rivers would soon destroy the greater part of them, which would be a great pity, as they had cost so much money, trouble, and time in waiting for them to reproduce themselves. And if these young fishes could remain unmolested for a few years longer, till they themselves had spawned, our bays would be full of these splendid fishes. Certainly this would be a great acquisition to the whole Pacific Coast.

I immediately visited the newspapers, and they kindly published a notice of the arrival of the numerous strangers, of their great importance, and the danger of their destruction if they were not protected.

Your honorable Board petitioned the Board of Supervisors to pass an ordinance to prohibit catching them under eight pounds in weight. This they quickly did. A similar petition it would be advisable to present to the Boards of Supervisors of Marin, Sonoma, Solano, Contra Costa, Alameda, San Joaquin, and Sacramento Counties. The young bass will most certainly visit the waters of all these counties, and their protection for a few years is of vital importance.

I have since learned from the market men that from three to four thousand of these fish were sold in the market before the ordinance was passed, and that it has since been in the newspapers that these fish have been caught and sold in other counties around our bay.

The arrival of so many young of this fish at one time in our markets, shows conclusively that the Striped bass have successfully reproduced themselves in our waters. Our anglers may anticipate some grand sport in a few years.

I am happy to give the people of California some desirable information about this useful fish, and take the opportunity of appending to my report a valuable paper taken from "The Fisheries and Fishing Industries of the United States," by George Brown Goode.

NECESSITY FOR A TROUT HATCHERY NEAR SAN FRANCISCO AS A DISTRIBUTING POINT.

California is a large State in territorial area, approximating to three times the size of the State of New York.

The headwaters (the breeding places for trout and salmon) of most of the large streams in our State are far away from the railroads, and are also in high altitudes. To reach these is, in most instances, a weary road to travel by stage coach and teams, and in some cases by horseback only, following Indian trails through almost impassable cañons and mountain gorges.

The Sisson Hatchery, which is at present the distributing point for the Rainbow trout, is about seven hundred miles from the southern border of the State, and applications for trout come in from Siskiyou to San Diego Counties.

To distribute fish into these streams over such a vast territory is very expensive, and the cost is much increased by the many difficulties in getting to their headwaters with teams heavily loaded with ice and cans of water, over the long, hot valleys, and up steep mountain roads.

It is also unsafe to transport young fish in large numbers over such long distances.

To ship half a million of eyed eggs is comparatively inexpensive to what it is to ship the same number of young fish. Thirty thousand young trout in eight to ten cans of water is as much as it is safe for one man to carry on a long journey. This means half a ton of water and hundreds of pounds of ice.

Express charges for this great weight are heavy; the cost of the ice, railroad fares to and fro, teams to transport the fish from the railroad to the streams (sometimes for sixty miles to their headwaters), hotel expenses, and telegraphic charges rapidly eat up our funds.

Two men are compelled to go on long journeys to care for the fish, as the water in the cans has to be almost continuously aerated night and day to give the fish fresh air to breathe, and the water in the cans requires occasional changing.

A trip with trout from Sisson to the southern part of the State consumes nearly one week's time, which is very dangerous to the safety of the young trout, and limits the number of trout which can be distributed. To make these journeys shorter and less expensive, with saving of time, and with more certainty that less fish will be lost in their transporta-

tion, it is essential that a string of hatcheries should be established as is done in other States.

We have already built and equipped two extensive hatcheries: one at Lake Tahoe as a point for distribution for the mountain region and the eastern slope of the Sierras; and a large hatchery at Sisson, which was built for the purpose of stocking the Sacramento River with salmon. This can be used as a distributing point for the northern part of the State for trout also; and a small hatchery on Shovel Creek, which is for eyeing the eggs of trout to be shipped to other hatcheries as distributing points.

Now, it is very essential that a hatchery with nursery troughs (space sufficient to accommodate one million of young trout till they begin to feed, or till they are old enough to be distributed in the streams) should be built during the coming winter in or near San Francisco, as a distributing point for the waters in Central California, to which the eyed eggs can be sent from Shovel Creek or some other hatchery.

A plain hatchery for this purpose, well equipped, with quarters for the men, would probably cost from \$1,000 to \$1,200.

The demand for trout will be the greatest from a hatchery here to keep up the supply in the many streams in this part of the State, to meet the growing wants of the many anglers in the counties surrounding the bay of San Francisco.

This place is also the center from which radiates all the many routes of travel by which the trout can be conveniently shipped to all parts of the State without delay.

After full consideration of these matters by your honorable Board, if I have presented the subject in a proper light to convince you of its importance, I would suggest that a petition be presented to the incoming Legislature in the first days of its session to make an appropriation of \$1,000 to \$1,200 for a new hatchery and its equipment and quarters for the attendants, the money to be immediately available, so that work can begin in time to have it finished to receive the first trout eggs in the early spring of 1891.

APPROPRIATIONS FOR THE SUPPORT OF HATCHERIES AND RESTORATION OF FISHES.

As the field of fish culture and propagation is continually increasing, the appropriation for this department must also increase with its development. The appropriations, owing to the immense area of California, should at least approximate those of Eastern States (which are devoted almost entirely to hatcheries and the restoration of fishes). The State of New York, which is of one third less area, makes an annual appropriation of from \$30,000 to \$35,000 to enable its Fish Commission to carry out its work. This department is being continually hampered by want of funds, and is compelled to forego the necessity of making constant improvements. Efficiency, thorough and satisfactory, cannot be had without incurring expenses far above the present limited appropriation in the department embracing Hatcheries and Restoration of Fishes.

It is doubtful economy that hinders the cheapening of food for the people.

It seems absurd to appropriate so small a fund as \$5,000 to foster and maintain the fish industries of this State. A resource furnishing a staple

article of food for the people—a cheap and plentiful supply of wholesome food—is of immense importance. The waters of California are almost unlimited in their capacity to produce fish food, but wanton destruction of fishes when they congregate at certain seasons of the year for breeding purposes, and the increasing demand on them to supply an increasing population with food, will soon largely diminish their numbers unless assistance is rendered by artificial reproduction on a greater scale than is being done at present.

When live stock is owned by private parties it is to their individual interest that the best care be taken of it to the end that it may make the most remunerative returns. But the fish which the waters of our State produce are the common property of the whole people, and it is not the duty of any one individual to see that the fish interests are cherished.

AN ANNUAL APPROPRIATION OF TWELVE THOUSAND DOLLARS NECESSARY.

It follows that it is the duty of the Legislature to appropriate adequate funds to meet the expenses incurred in carrying out the work necessary to such an important trust.

This work embraces the artificial reproduction and distribution of young salmon upon their nursery grounds to keep up the supply to meet the immense draft upon their numbers as they annually migrate as mature salmon from the ocean to their spawning grounds, by the fishermen's many miles of network and seines, catching them to supply canners and the local markets.

If this work is not kept up from year to year, it is certain that their number will be diminished, and in time salmon will become as great a rarity in California as they are to-day in New England.

The artificial reproduction and distribution of trout over this State to satisfy the increasing number of applications for these fishes to supply the depleted streams which our growing population in their search for health and recreation exhaust, it is far beyond the unaided powers of trout to keep the streams well stocked; and as far as the present appropriation for this costly work goes, it is only a make-believe towards accomplishing what the real work should.

It would be most desirable to continue the purchase of the eggs of the Eastern Brook trout—that pride of the trans-mountain angler—for their introduction into the headwaters of all our high mountain streams, where it has been demonstrated they have done well in the past, and it is but reasonable to suppose that as they become acclimated they will gradually descend the rivers and spread themselves over the whole State.

The Black bass is such a desirable fish that, as we already have them, it would be a public benefit to systematically distribute them into all the suitable waters of the State. When once planted they become permanent "settlers," no restocking is necessary, and it would be well to do this work quickly.

I would recommend the introduction of the eel, which is highly esteemed in the East and in Europe; in fact, it is considered a luxury, and is preferred by many to the trout. The flesh of the eel salted, smoked, and pickled, forms quite an article of trade, and will in time afford a large addition to the food for the people.

Many have asked for the introduction of the Big-mouthed Black bass from the Southern States for planting in our warmer waters; also, the big catfish of Texas, which occasionally weighs three hundred pounds. It is said that it would be very desirable for the Sacramento and San Joaquin Rivers.

A part of the fund should be expended for the scientific investigation of the economic fishes of our State, and experimenting in artificial reproduction of others fishes, among them the sturgeon, which valuable food fish is becoming notably scarce.

For all of the foregoing, which is expensive field work, the present appropriation of \$5,000 is ridiculously insufficient, and it is needful that \$12,000 should be annually appropriated for the sole and exclusive use of this department.

Therefore, I would suggest to your honorable Board that you would petition the Legislature for an annual appropriation of \$12,000 for the Hatcheries and Restoration of Fishes.

SCREENS FOR DITCHES.

Most ditches take their supply of water from the streams above the valleys, from the lower foothills to far into the high mountains.

Our mountain streams are good spawning grounds for trout and salmon.

The young trout, as soon as able to swim, leave their hidden recesses in the gravel and seek the shallow water near the bank or shore of the streams where the water is less swift. Here they are better able to stem the current, and are also comparatively safe from the raids of larger fish which live in the deeper water, and are cautious about venturing into the shallow water.

Ditches, of course, take their supply from the shores of these streams. The current at the inlet of these ditches is strong, and draws the little fellows down with the water farther and farther. The current within the ditch is so strong that they cannot get back, hardly, even if the instinct of fear impelled them to do so.

But they go with the current willingly. Mother Nature has not taught them that these side issues from their native brooks lead to their destruction, by distributing them with the water to nourish the roots of alfalfa and timothy grasses, or through the great fields of the raisin grape or wine vineyards and orange orchards; nor by being dashed over the rocks through nozzles of miners' pipes, nor by being ground up into mince meat by the turbine wheels of sawmills and papermills.

These thousands of ditches tapping the mountain streams the whole length of our State, from Oregon to Arizona, destroy ten times more fishes, especially the trout and salmon, than is done by all other means of illegal destruction of fishes. The numbers of trout destroyed through the agency of ditches will run up into millions every year.

This great destruction of fishes is self-evident to every man who taps a trout stream for irrigating purposes, unless the process has been going on so long that the stream has already become barren of fishes.

I have already cited an instance in this report of the great destruction of trout in Siskiyou County by a ditch from Shasta River, which was told to me by the owner of the ditch.* I have known of what I write by observation in traveling over this State during the past twenty years.

Refer to trip to look up a trout hatchery in 1889.

Hundreds of men have told me the same story, and angrily denounced such wanton destruction of trout, saying that in a few years, unless there was a stop put to it, there would be but few to destroy. Those who use the waters from these ditches admit the facts. I do not believe there is a man in the State who knows anything practically about the use of ditch water but who will admit what I have stated about the great destruction of trout is substantially true. I will instance a case which happened last year not far from the hatchery at Sisson.

A lot of young salmon had been distributed in Big Spring Creek. At that time we were not aware that there was a ditch taking water from this creek, but it happened there was one whose inlet was from the opposite bank from the road, hidden from view by a thick growth of alders.

Some time after the salmon had been planted, at a considerable distance above this ditch, its owners had occasion to shut the water off. After the water had drained away they saw so many dead salmon, that word was sent to the men at the hatchery who went up to investigate, and they estimated that about seven thousand young salmon had perished. What is the use of stocking our streams with fish to have them killed off by wholesale in this manner?

It is well known that in early times all the mountain streams through the mining counties were bountifully stocked with trout, and where there are at the present time hundreds of ditches taking water from these streams for irrigating and mining purposes. All these streams have fine spawning grounds for trout for miles far above where the mining debris has been deposited, and even where it is almost impossible for an angler to go. And besides these counties are not thickly populated, and the streams cannot have been fished to excess. Yet the people in these mountain counties are asking for trout to restock their streams.

All these streams would be full of trout if it were not that they have been destroyed by the open ditches.

To stock these streams with trout, whose waters are taken out through ditches without screens at their inlets to protect the young fish from being drawn into them and destroyed, is a waste of time and money. It is as ineffectual as it would be to try to dip up water in a sieve.

If it is of material consequence to keep our mountain streams stocked with trout and salmon, then it is imperative that a law should be passed compelling the owners of all ditches, flumes, and pipes which take their supply of water from public streams, to maintain screens across their inlets of sufficient fineness to prevent young trout from finding their way through.

In regard to the size of the mesh, it is of the utmost importance that it should keep out the young trout, and yet let through enough water for the requirements of the ditch.

The mesh of the screen should not be larger than one fourth of an inch square.

To let in sufficient water with this size of mesh, and not require but little attention to keep off rubbish, the surface of the screen should be two or three times larger than the cross-section of the ditch.

The ditch or flume should be enlarged at its inlet or mouth by flaring its sides to accommodate this size of screen.

A good way to put in a screen which will prevent the young fish from being drawn against the wire, as well as the floating stuff in the stream,

which would have a tendency to choke the screen, and, of course, let in less water, is to have the flaring end of the flume flush with the bank of the stream, and fitted with cleats to receive a light wooden frame.

To this frame should be fastened an oblong square basket made of the screen wire cloth. The depth of the basket should be a foot or so according to the size of the ditch. The screen being in place, the depth of the basket would thus project into the stream, and have the two ends, one side, and the bottom of the basket as a screen surface.

The upper end of the basket would, of course, be more or less clogged up with floating stuff, but the under side and the lower end would be almost entirely free, while the bottom of the basket, or outer surface, which should be nearly parallel with the current of the stream, would be kept comparatively free from floating stuff by the current itself.

This basket screen, being loosely fitted between the cleats, could be easily taken out, and with a few splashes in the stream cleared of all rubbish.

A coarse rack of slats outside of the screen would keep off any large floating substance, which might otherwise injure the basket, and with a boom fastened at the bank above the ditch, and swung diagonally part way across the stream and fastened in position, would ward off most of the floating debris.

Of course, if the main ditch at the stream has a screen, the smaller ditches taking water from the main ditch will require none.

Galvanized wire cloth of one quarter-inch mesh, strongly made, and soldered at each intersection of the wires, can be bought in San Francisco for 6 cents per square foot.

The cheapness of the wire will make the cost of a good sized screen but a small item. And with a little of our American ingenuity in constructing it, and an ardent desire for the safety of our trout, screens can be speedily placed at the inlet of all ditches.

Accompanying this report will be found a copy of the Screen Law of Wyoming, which Fish Commissioner Louis Miller kindly sent me.

THE STRIPED BASS. *Roccus Lineatus*.

Geographical Distribution.—The Striped bass, as has already been stated, occurs in all the waters of our coast from latitude 50 degrees to latitude 30 degrees. In the North it is called the "Striped bass," in the South the "Rock-fish," or the "Rock." The neutral territory, where both these names are in use, appears to be New Jersey. The fishermen of the Delaware use the latter name; those of the seacoast the former. Large, sea-going individuals are sometimes known in New England by the names, "Green-head" and "Squid-hound." There is still some uncertainty regarding the southern limits of the distribution of this species. In the Saint John's River, Florida, they are very unusual. Though familiar in the fisheries of that region since 1873, I have only known of the capture of two individuals. Mr. Stearns has obtained one or two specimens in the Gulf of Mexico, and gives an account of the degree of their abundance in those waters. He writes: "They are occasionally caught on the northern shores of the Gulf, and are, evidently, more common about the mouths of the Mississippi River than elsewhere. Since they are taken in this region only in seines, and in shallow water, their abundance cannot be correctly determined. The earliest I have been able to obtain of the capture of Striped bass in Pensacola Bay, is

that of Captain John Washington, of Mystic, Connecticut, who states that in 1850, while seine fishing from the smack "Francis Parkes," he surrounded with his seine a large school of fish which were quite unmanageable. A few of them were saved, and proved to be large Striped bass, weighing from fifteen to forty pounds. At long intervals since, solitary individuals have been taken at various points on the coast. At New Orleans it is found in the market quite often. An eighteen-pound specimen was sold there in March, 1880."

In Hallock's "Sportsmen's Gazetteer" the following statement occurs: "It is constantly seen in rivers of fresh water at great distances from the ocean, even as far up the Mississippi as St. Louis, and it is common in White River, Arkansas, and in all the rivers of the Southern States."

While there can be no question that straggling individuals of this species have been taken in the Gulf of Mexico, it seems probable that both Mr. Stearns and Mr. Hallock have been mistaken by the resemblance of this species to the Brassy bass (*Roccus interruptus*), which abounds throughout the lower Mississippi Valley.

Canadian authorities inform us that, though the bass still occur along the New Brunswick and Nova Scotia shores of the gulf, they are much less abundant and of smaller size than formerly. They have been known to ascend the St. Lawrence as far as Quebec, and Mr. Roosevelt has seen a specimen, a female fish, which was taken in the Niagara River near Lewiston. The bass is most abundant in the bays and inlets of Cape Hatteras, in the Chesapeake and Delaware Bay region; and in the protected waters of Long Island and southern New England. In winter they occur in considerable numbers in the Altamaha River, and are unusual in the markets of Charleston, South Carolina.

Habits.—The Striped bass is not migratory, being found along our coasts in winter as well as in summer, and in our markets in every month in the year. Great quantities are taken in winter in the rivers tributary to the Chesapeake, and in the rivers of New Brunswick quantities of them are speared through holes in the ice. During the past four years I have known of their capture in Long Island and Block Island Sounds, and in the Merrimac River in December, and in Martha's Vineyard Sound and in the lower part of the Hudson River in January. Though they appear to avoid a temperature higher than 65 or 70 degrees, they are not sensitive to cold, and there is good evidence that they frequently, when detained throughout the winter in shallow places, enter upon a state of torpidity.

Food.—They are very voracious feeders. Entering the rivers, they prey upon small fishes. They are particularly abundant at the time of the spring runs of the shad and herring, and at this season are particularly plump and well fed, doubtless owing to the ease with which they can obtain food. They also frequent the rocky shores of the bays and sounds at high tides, in search of crabs, shrimps, and squids; and they are said to feed upon clams and mussels, which they obtain by delving with their snouts.

Reproduction and Growth.—They spawn in the late spring and early summer, some of them in the rivers, others probably at sea, although this has not been definitely ascertained. The European bass are said to deposit their spawn near the mouth of the rivers in the summer months.

From North Carolina to New Jersey the spawning time appears to be in May; in New Brunswick in June. Dr. Blanding many years ago

estimated the number of eggs at two million two hundred and forty-eight thousand. Their rate of growth is very rapid. Dr. C. C. Abbott, for five successive years, found in the Delaware River young an inch long in the second week in June. About the middle of October these had grown to the length of four and a half inches.

The young fish—five to nine inches in length—which are taken in such quantities in the Potomac in February and March, are supposed to be the young of the previous year. Captain Gavitt, of Westerly, Rhode Island, has caught bass in June that weighed from one half to one pound, put them in a pond, and taken them out in the following October, when they weighed six pounds. The average size of this fish probably does not exceed twenty pounds. In the Potomac, Hudson, and Connecticut Rivers the largest seldom exceed thirty or forty pounds, though in the Potomac fifty-pound fish are not unusual. The Fish Commission has for several years had a standing offer of a reward for a sixty-pound fish from the Potomac, but none has been forthcoming as yet. The largest Striped bass on record was one weighing one hundred and twelve pounds, taken at Orleans, Massachusetts, in the town cove. Such a fish would be at least six feet in length. A fairly proportioned bass thirty-six inches long would weigh at least eighteen pounds.

Uses.—The Striped bass is one of the most valuable of our food fishes, its flesh being firm, finely flavored, and hard enough to bear exposure to the air for some time without injury. It is also the most popular game fish, next to the salmon. Those in the markets are chiefly obtained in seines and traps, set at various points along the coast from the south side of Cape Cod to New Jersey. Great quantities are also taken in the shad seines in the spring. They may be readily taken, also, by heaving and hauling in the surf with menhaden bait, the fish being tolled by the use of great quantities of menhaden ground into small bits, and in fresh or brackish water by the use of the artificial fly. At various points on the coast of southern New England are club-houses, supported by wealthy amateurs for the purpose of carrying on these sports.

It has already been stated that the Striped bass are believed to be less abundant in the Gulf of St. Lawrence than in former years. Similar complaints are heard from the Bay of Fundy, and from Cape Cod, where the period of diminution is believed to date from the last advent of the Bluefish: about 1850. The bass fishery, in Cape Cod Bay, was formerly of great importance, but the capture of this fish is now of rare occurrence. The early settlers of New England seem to have been more impressed by the abundance of bass than by any other circumstances connected with the fisheries, and the early chronicles are full of allusions to their exceeding plenty and excellence.

Captain John Smith saw so many in one river, that he declared that he thought he might have walked across on their backs dryshod. While there can be no doubt that north of Cape Cod their numbers have decreased, there is no reason to believe that elsewhere on our coast the fisheries have had any especial effect upon them. A Hessian officer, writing in 1777, declared that enormous numbers were, at that time, brought to New York; and the same might be said at the present day. Three fishing gangs at Bridgehampton, New York, took over eight thousand in less than a week, in December, 1874. Captain Charles Ludlow secured at one set of his seine one thousand six hundred and seventy-two bass, or about three and a half tons. Shortly afterwards a

New London fisherman brought in four hundred and nineteen bass, one hundred and eighty-five of which had been caught with a hook in three hours, near Norfolk, Virginia. One thousand five hundred have been taken with a single set of the seine. A few years ago, it is said on credible authority that six hundred were once taken, the average weight of each being eighty pounds.

DISTRIBUTION OF FISH BY THE CALIFORNIA STATE FISH COMMISSION.

DISTRIBUTION OF TAHOE TROUT.

Distributed in September and October, 1888.

LOCALITIES AND REMARKS.	Number of Fish.
Squaw Creek	20,000
Lake Tahoe, at various points	245,000
Donner Lake	100,000
Dinkley and Buena Vista Creeks, Fresno County	30,000
South Fork of American River	20,000
Taylor Creek	25,000
Truckee River	105,000
South Yuba River	35,000
Shafer's Creek	7,000
Richardson's Creek	7,000
Barker's Creek and Lake	5,000
Gilmore's Lake	1,500
Watson's Lake	500
Total Tahoe trout (as reported by Mr. J. C. Frazier, October 27, 1888)	601,000

DISTRIBUTION OF TAHOE TROUT.

FROM TAHOE HATCHERY, 1889.

DATE.	Applicant.	Where Distributed.	Number of Fish.
1889.			
Aug. 18..		Blackwood Creek, tributary of Lake Tahoe.....	60,000
Aug. 24..		Sea Gull Point, Lake Tahoe.....	35,000
Aug. 26..		Near Saxon's Old Mill, Lake Tahoe.....	35,000
Aug. 27..		At wharf, Tahoe City.....	20,000
Aug. 28..		Off Island Ranch, Lake Tahoe.....	30,000
Aug. 29..		Off Island Ranch, Lake Tahoe.....	40,000
Sept. 3..		Meeks' Bay and Creek, Lake Tahoe.....	60,000
Sept. 3..	Murphy Bros.	Small lake at the head of Meeks' Creek.....	8,000
Sept. 4..	O. Roberts	Meeks' Bay, Lake Tahoe.....	60,000
Sept. 5..	O. Roberts	Phipp's Creek, tributary of Lake Tahoe.....	60,000
Sept. 6..	McKinney	Lake Tahoe, near Sugar Pine Point.....	60,000
Sept. 7..	McKinney	Quail Creek, tributary of Lake Tahoe.....	60,000
Sept. 8..	McKinney	In Lake Tahoe, near the snag.....	60,000
Sept. 10..	M. Lawrence	Taylor Creek, tributary of Lake Tahoe.....	60,000
Sept. 13..	M. Lawrence	Fallen Leaf Lake, tributary of Lake Tahoe.....	60,000
Sept. 14..	Mrs. Vade Clark	Rubicon River, branch of Middle Fork of the American River.....	50,000
Sept. 17..		Emerald Bay, Lake Tahoe.....	100,000
Sept. 18..	M. Lawrence	Taylor Creek and Floating Island Lake.....	30,000
Sept. 20..	A. J. Bayley	Burton Creek, tributary of Lake Tahoe.....	25,000
Sept. 23..	A. J. Bayley	Truckee River, above Wardrask Dam.....	60,000
Sept. 24..		Blackwood Creek, tributary of Lake Tahoe.....	65,000
Sept. 27..	Mr. Gilmore	Gilmore Springs, seven miles from Yank's.....	8,000
Sept. 29..	Mr. Wentworth	Loon Lake and Buck Island Lake, headwaters Middle Fork American River.....	25,000
Oct. 2..	A. L. Frost	Near Rubicon Point, Lake Tahoe.....	25,000
Oct. 5..		Ward Creek, tributary of Lake Tahoe.....	20,000
Oct. 5..	A. J. Bayley	Truckee River, below outlet of Lake Tahoe.....	6,000
Oct. 5..	Com. Todman	Lake Tahoe, near Tahoe City.....	5,000
Total.....			1,027,000

DISTRIBUTION OF SALMON.

FROM SISSON HATCHERY FOR THE SEASON OF 1889 AND 1890.

Early Fall Run.

DATE.	Where Distributed and Remarks.	Number of Fish.
1890.		
Feb. 3..	Cold Creek, tributary of Sacramento River.....	100,000
Feb. 4..	Suloway Creek, tributary of Sacramento River.....	100,000
Feb. 5..	Cold Creek, tributary of Sacramento River.....	100,000
Feb. 6..	Suloway Creek, tributary of Sacramento River.....	100,000
Feb. 7..	Big Spring Creek, tributary of Sacramento River.....	140,000
Feb. 8..	School House Spring Creek, tributary of Sacramento River.....	180,000
Feb. 10..	Suloway Creek, tributary of Sacramento River.....	150,000
Feb. 12..	Big Spring Creek, tributary of Sacramento River.....	100,000
Total.....		970,000

Late Fall Run.

DATE.	Where Distributed and Remarks.	Number of Fish.
1890.		
April 23..	West Fork Sacramento River.....	80,000
April 25..	West Fork Sacramento River.....	75,000
April 26..	Upper Soda Springs, main Sacramento River.....	75,000
April 28..	Near Dunsmuir, main Sacramento River.....	75,000
April 30..	Near Eighteenth Crossing, main Sacramento River.....	45,000
Total.....		350,000

DISTRIBUTION OF EASTERN BROOK TROUT.

DATE.	Localities and Remarks.	Number of Fish.
1890.		
June 7..	Deer Creek, east of Vina, Tehama County, California, for Senator Stanford.....	12,000
June 6..	Headwaters McCloud River, Siskiyou County.....	24,000
June 8..	Shovel Creek, branch of Klamath River, for A. C. Tubbs, Siskiyou County.....	4,000
June 9..	Big Springs, branch of Shasta River, Siskiyou County.....	8,000
June 9..	Griffen's Springs, branch of Shasta River, Siskiyou County.....	2,000
June 8..	Wadsworth Springs, branch of Shasta River, Siskiyou County.....	1,000
June 8..	School House Springs, branch of Sacramento River, Siskiyou County.....	2,000
June 19..	Headwaters of Shasta River, branch of Klamath River, Siskiyou County.....	8,000
June 19..	Kaiser's Springs, headwaters of Sacramento River, Siskiyou County.....	6,000
June 25..	West Fork of Sacramento River, Siskiyou County.....	16,000
Total Eastern Brook trout.....		83,000

DISTRIBUTION OF TAHOE TROUT.

FROM TAHOE HATCHERY.

DATE.	Applicant.	Where Distributed.	Number of Fish.
1890.			
July 28.	Com. Todman	Truckee River, above Ward Rush Dam (Rainbow trout)	8,000
July 29.	M. Lawrence	Taylor Creek, tributary of Lake Tahoe	60,000
July 31.	M. Lawrence	Fallen Leaf Lake	56,000
Aug. 2.	M. Lawrence	Taylor Creek and Cascade Lake	60,000
Aug. 4.	Mrs. Kirby	Emerald Bay, Lake Tahoe	60,000
Aug. 5.	A. L. Frost	Near Rubicon Point, Lake Tahoe	56,000
Aug. 6.	Mrs. Wade Clark	Rubicon River, branch of Middle Fork of American River	50,000
Aug. 8.		Meeks' Creek, tributary of Lake Tahoe	52,000
Aug. 9.	O. Roberts	Phipps' Creek, tributary of Lake Tahoe	56,000
Aug. 11.	J. McKinney	Quail Creek, tributary of Lake Tahoe	56,000
Aug. 12.	J. McKinney	McKinney's Creek, tributary of Lake Tahoe	50,000
Aug. 19.	Mr. Gilmore	Gilmore Springs, seven miles from Yank's (several small lakes)	35,000
Aug. 21.		Blackwood Creek, tributary of Lake Tahoe	60,000
Aug. 22.	J. McKinney	Loon Lake (15,000), Summit Lake (5,000), Quail Lake (5,000)	25,000
Aug. 23.	M. Lawrence	South Fork American River, fourteen miles from Tallac	35,000
Aug. 25.	Com. Todman	Truckee River, above Ward Rush Dam (Rainbow trout)	38,000
Aug. 26.	J. Moody	Donner Lake	50,000
Aug. 26.	J. Moody	Headwaters Alder Creek, near Truckee	8,000
Aug. 27.	Mr. Scott	Squaw Creek, tributary of Truckee River	8,000
Sept. 14.	Mr. Scott	Squaw Creek, tributary of Truckee River	10,000
Sept. 17.	H. D. Burton	Carnelian Bay, Lake Tahoe	20,000
Sept. 23.	A. J. Bayley	Burton Creek, tributary of Lake Tahoe	20,000
		Total Tahoe trout	873,000

DISTRIBUTION OF BLACK BASS.

DATE.	Applicant.	Locality and Remarks.	Number of Fish.
1889.			
Aug. 12.	Senator Jones	Thermalito Reservoir, at Oroville, Butte County, Cal.	60
Aug. 17.	J. D. Jordan	Clear Lake, Lake County, Cal.	160
Aug. 25.	J. D. Jordan	Clear Lake, Lake County, Cal.	160
Aug. 31.	W. G. Dickinson	Sweetwater Lake, National City, San Diego County, Cal. (40 per cent lost)	120
1890.			
Aug. 12.	Pacific Imp't Co.	In lake at Del Monte, Monterey County, Cal.	40
Aug. 12.	Pacific Imp't Co.	Reservoir in Pacific Grove, Monterey County, Cal.	60
Aug. 22.	O. Weissman	Blue Lakes, Lake County, Cal.	60
Aug. 29.	J. D. Jordan	Clear Lake, Lake County, Cal.	88
Sept. 4.	A. C. Bassett	Sargent's Station, Pajaro River, Santa Clara County, Cal.	40
Oct. 6.	McD. R. Venable	City Reservoir, San Luis Obispo, San Luis Obispo County, Cal.	10
Oct. 6.	McD. R. Venable	Laguna de San Luis, two miles west of San Luis Obispo City, San Luis Obispo County	50
		Total Black bass	857

DISTRIBUTION OF RAINBOW TROUT.

FROM SISSON HATCHERY.

DATE.	Name of Applicant.	Localities where Planted.	Number of Fish Shipped.
1890.			
July 15.	Chas. Sonntag	Lagunitas Lake, Marin County	12,000
July 15.		Lagunitas Creek, Marin Co., 5 miles below dam	8,000
July 20.	S. V. W. Works Co.	San Mateo Ck., above reservoir, San Mateo Co.	40,000
July 23.	J. B. Randol	Almanitos Creek, near New Almaden Mines, Santa Clara County	18,000
July 23.	J. B. Randol	Guadalupe Creek, Santa Clara County	12,000
July 26.	A. W. Ingalsbe	Smith's Creek, a branch of Calaveras Creek, Santa Clara County	12,000
July 26.	A. W. Ingalsbe	Stevens' Creek, Santa Clara County	9,000
July 26.	A. W. Ingalsbe	Saratoga Creek, Santa Clara County	9,000
July 30.	Mr. Mendenhall	Arroyo Mocho Creek, Alameda County	18,000
July 30.	Chas. Hadsell	Alameda and Calaveras Creeks, Alameda Co.	12,000
Aug. 3.	J. R. Hebron	A branch of the Salinas River, Monterey Co.	12,000
Aug. 3.	Chas. Romie	Arroyo Seco, branch of Salinas River, Monterey County	18,000
Aug. 11.	John T. Doyle	Stevens' Creek, Santa Clara County	18,000
Aug. 11.	John T. Doyle	Adobe Creek, Santa Clara County	12,000
Aug. 15.	George Dennison	Boulder Creek, branch of San Lorenzo Creek, Santa Clara County	18,000
Aug. 15.	George Dennison	Bear Creek, branch of San Lorenzo Creek, Santa Clara County	12,000
Aug. 19.	F. Marriott	Los Gatos Creek, Santa Clara County	30,000
Aug. 23.	J. G. Chesley	San Gregorio Creek, San Mateo Co. (½ lost)	30,000
Aug. 31.	Dr. C. O. Dean	Paper Mill Creek, Marin County	30,000
Sept. 3.	A. C. Bassett	In branches of Uvas Creek, Santa Clara Co.	30,000
Sept. 7.	A. W. Stott	Sonoma Creek, Sonoma County	18,000
Sept. 7.	T. Lake Harris	A branch of Russian River, near Santa Rosa, Sonoma County	12,000
Sept. 11.	Dr. H. W. Smith	At Chili Bar, South Fork American River, El Dorado County	12,000
Sept. 11.	Dr. H. W. Smith	At Moore's Bridge, South Fork American River, El Dorado County	3,000
Sept. 11.	Dr. H. W. Smith	Near Dennis Johnson's, South Fork American River, El Dorado County	6,000
Sept. 11.	Dr. H. W. Smith	Two Silver Creeks, branches of South Fork American River, El Dorado County	9,000
Sept. 18.	C. F. Haswell	Cache Creek, near Ramsey, Yolo County	30,000
Sept. 23.	F. L. Wooster	In branches of Napa Creek, near Napa, Napa Co.	30,000
July and Aug.	Edson Bros.	Shovel Creek, branch of Klamath River, Siskiyou County	130,000
Aug. 25.		West Fork Sacramento River, Siskiyou Co.	25,000
Aug. 25.		Suloway Creek, branch of Sacramento River, Siskiyou County	25,000
Aug. 25.		Cold Creek, branch of Sacramento River, Siskiyou County	15,000
Aug. 26.		School House Creek, branch of Sacramento River, Siskiyou County	50,000
Aug. 28.		In three creeks at Peter Klink's, branches of Sacramento River, Siskiyou County	50,000
Sept. 28.		West Fork Sacramento River, Siskiyou Co.	50,000
Oct. 1.		Near Dunsmuir, main Sacramento River	50,000
Oct. 2.		Near Mossbra Falls, main Sacramento River, Siskiyou County	41,000
Oct. 3.		Near Little Castle Creek, main Sacramento River, Siskiyou County	40,000
Oct. 6.	McD. R. Venable	San Margarita Creek, branch of Salinas River, San Luis Obispo County	8,000
Oct. 6.	McD. R. Venable	San Luis Creek, San Luis Obispo County	8,000
Oct. 6.	McD. R. Venable	Chorro Creek, empties into Morro Bay, San Luis Obispo County	8,000
Oct. 6.	McD. R. Venable	Laguna de San Luis, near San Luis Obispo City, San Luis Obispo County	10,000
Oct. 6.	McD. R. Venable	Steiner and Venable Creeks, branches of San Luis Creek, San Luis Obispo County	3,000
Oct. 6.	McD. R. Venable	Arroyo Grande, San Luis Obispo County	3,000
		Total Rainbow trout	996,000

DISTRIBUTION OF SALMON BY THE UNITED STATES FISH COMMISSION
FROM McCloud River Hatchery.

DATE.	Localities.	Number of Fish.
1888.		
Nov., Dec.	McCloud River	1,000,000
1889.		
Nov., Dec.	McCloud River	84,000
	Total salmon	1,084,000

DISTRIBUTION OF TROUT BY PRIVATE HATCHERIES IN 1890.

KIND OF FISH.	Owner of Hatchery.	Place Planted.	Remarks.	Number of Fish.
Native trout	North Pac. Game and Fish Club.	Sonoma Creek	From eggs taken from trout trapped in Sonoma Creek by permission of the California State Fish Commission	12,000
Rainbow trout	North Pac. Game and Fish Club.	Sonoma Creek and Robinson Creek	From eggs shipped from the Shovel Creek Hatchery by the California State Fish Commission.	90,000
Eastern Brook trout	North Pac. Game and Fish Club.	Robinson Creek	(As reported by Mr. A. V. La Motte of the North Pacific Game and Fish Club).	25,000
Native trout	Alex. Badlam.	Bear Creek	From trout trapped in Bear Creek, Napa County, by permission of the California State Fish Commission.	15,000
Rainbow trout	Alex. Badlam.	Sulphur Creek	From eggs shipped from the Shovel Creek Hatchery by the California State Fish Commission.	20,000
Rainbow trout	Alex. Badlam.	Lokonoma Creek	Near Middletown, Lake County, California	20,000
Rainbow trout	Alex. Badlam.	Anderson Creek	Near Middletown, Lake County, California	20,000
Rainbow trout	Alex. Badlam.	Grizzly Creek	Near Bradford's, Lake County, California	10,000
Rainbow trout	Alex. Badlam.	Bradford Creek	Near Quicksilver Mine, Lake County, California	5,000
Rainbow trout	Alex. Badlam.	Bear Creek	Near Arcadia, Napa County, California	15,000
Rainbow trout	Alex. Badlam.	Troutdale Creek	Near Arcadia, Napa County, California (as reported by Mr. A. Badlam)	10,000
Rainbow trout	S. H. Knowles	Bear Creek branch		
Rainbow trout	S. H. Knowles	S. Lorenzo Creek	From eggs shipped from Shovel Creek Hatchery by California State Fish Commission	15,000
Rainbow trout	S. H. Knowles	In his private ponds	From eggs shipped from Shovel Creek Hatchery by California State Fish Commission.	15,000
Rainbow trout	S. H. Knowles	Los Gatos Creek, Santa Clara Co.	From eggs shipped from Shovel Creek Hatchery by California State Fish Commission	10,000
Rainbow trout	Del Monte Hotel.	Carmel River and reservoirs	From eggs shipped from Shovel Creek Hatchery by California State Fish Commission	40,000
			Total trout	322,000

RECAPITULATION.

Salmon distributed by California Fish Commissioners	4,478,000
Salmon distributed by United States Fish Commissioners	1,084,000
Eastern Brook trout distributed by California Fish Commissioners	83,000
Tahoe trout distributed by California Fish Commissioners	2,501,000
Rainbow trout distributed by California Fish Commissioners	988,000
Black bass distributed by California Fish Commissioners	832,000
Rainbow trout distributed by private hatcheries	322,000
Total	9,464,800
Salmon eggs in Sisson Hatchery October 15, 1890	3,000,000

THE FOOD FISHES OF THE CALIFORNIA FRESH WATERS.

By DR. CARL H. EIGENMANN.

The knowledge of the fresh-water fishes of California is at present more limited than that of any other State. It is, therefore, no easy task to present an account of the food fishes which shall at the same time be popular, or free from the technicalities of the ichthyologist, and scientifically exact. My personal observations have been confined to the southern and central counties of California, my explorations having been rather prematurely arrested. I hope, however, either this or the coming year to thoroughly explore every stream and lake in the State, and present you with a fuller report.

There is comparatively a very limited variety of fishes in California. A stream which, in the Mississippi Valley, would harbor seventy-five or a hundred different species of fish, would, in California, scarcely contain twenty. This is due to two causes.

CAUSES OF FISH SCARCITY.

I. Many of our streams become entirely dry during the summer, and no species that does not migrate to the sea or the lower or higher water-courses, can exist in them.

II. It is a law in the distribution of fresh-water fishes that the greater the water system the larger the number of species of fishes found in any of the tributaries. The tributaries of the Sacramento thus have much fewer species than the tributaries of the Mississippi, and the tributaries of the Mississippi much fewer than the tributaries of the Amazon. To be more precise, one naturalist has caught as many species of fishes in one of the tributaries of the Mississippi in a day as there are known from the entire region west of the Sierra Nevada.

NAMES OF FISHES.

I present a list of the fresh-water fishes now known from California, giving both the scientific and popular name:

Ammocetes tridentatus Gairdner. Lamprey.
Ammocetes cibarius Girard. Lead-colored Lamprey.
Acipenser transmontanus Richardson. White Sturgeon.
Acipenser medirostris Ayers. Green Sturgeon.
Catostomus arxopis Jordan. Kern River Sucker.
Catostomus rex R. Eigenmann. Klamath Sucker.
Catostomus occidentalis Ayers. Sacramento Sucker.
Catostomus tahoensis Gill and Jordan. Tahoe Sucker.
Chasmistes brevirostris Cope.
Chasmistes luxatus Cope.
Orthodon microlepidotus Ayers.
Lavinia exilicauda Baird and Girard.
Pogonichthys macrolepidotus Ayers.
Mylocheilus caurinus Richardson.
Mylopharodon conocephalus Baird and Girard.
Pychocheilus oregonensis Richardson. Sacramento Pike.

Ptychocheilus rapax Girard.
Ptychocheilus harfordi Jordan and Gilbert. Sacramento Pike.
Phoxinus montanus Cope.
Phoxinus orcuttii E. and E.
Phoxinus conformis Girard.
Phoxinus bicolor Girard.
Phoxinus obesus Girard.
Phoxinus crassicauda Baird and Girard.
Phoxinus crassus Girard.
Phoxinus cœruleus Girard.
Algansea dimidiata Cope. Chub.
Algansea symmetrica Baird and Girard.
Algansea bicolor Girard.
Luxilinus occidentalis Baird and Girard.
Coregonus williamsoni Girard. Whitefish.
Oncorhynchus gorboscha Walbaum. Humpback Salmon.
Oncorhynchus keta Walbaum. Dog Salmon.
Oncorhynchus tshawytscha Walbaum. Quinnot Salmon.
Oncorhynchus kisutch Walbaum. Silver Salmon.
Salmo gairdneri Richardson. Steel-head Salmon.
Salmo gairdneri irideus Ayres. Brook Trout.
Salmo purpuratus Pallas. Oregon Brook Trout.
Salmo purpuratus henshawi Gill and Jordan. Tahoe Trout.
Salvelinus malma Walbaum. Dolly Varden.
Gasterosteus williamsoni Girard. Stickleback.
Gasterosteus microcephalus Girard. Stickleback.
Archoplites interruptus Girard. Sacramento Perch.
Cottus asper Richardson.
Cottus semiscabrus centropleurus E. and E.
Cottus gulosus Girard.
Cottus minutus Pallas. "Catfish."

By saying that the number of species of fresh-water fishes is limited, I do not wish to imply that the food fishes are less in number or inferior in quality, but merely that we have less variety, a defect which can be remedied by introducing other species.

DESIRABLE SPECIES TO IMPORT.

The most prominent food fishes of the Mississippi Valley which are not indigenous to California, are the various catfishes, the buffalo, the pickerels, most of the sunfishes, especially the Black bass, the perches, and the bass. Several of these have already been introduced.

In the southern part of the State, where all but the mountain sources of the rivers dry up during the summer, we naturally have but few fresh water fishes, and any attempts to stock these rivers are, of course, futile. There are but four different species of fishes in the fresh waters of San Diego County, exclusive of the Colorado River. One is a small killifish living in the hot springs of the Colorado Desert, another a small stickleback, a third a small minnow, while the only eatable fish is the *Salmo irideus*, which occurs, as far as known, only in Pala Creek. There is scarcely more variety till we reach the Tulare Basin. *Salmo irideus*, or the Brook trout, is the only food fish south of the Tulare Basin, and it never reaches a large size there. A few species of marine fishes run up the Southern California streams during spring. Chief of these is the mullet. When the dams of the Sweetwater reservoirs were opened, to clear part of the land of the water, large numbers of Sea bass ascended the stream thus formed. With these remarks Southern California may be dismissed.

The remainder of California may be divided into the Tulare, Sacramento, Klamath, and Tahoe regions, each of which has a different set of food fish. They are:

Tulare Region.	Sacramento Region.	Klamath Region.	Tahoe Region.
Kern River sucker.	White sturgeon. Green sturgeon. Sacramento sucker. Salmon. Brook trout. Salmon trout.	White sturgeon. Green sturgeon. Three species of suckers. <i>Salmo purpuratus</i> . Salmon trout. Dolly Varden.	Tahoe sucker. Tahoe trout. Whitefish. Chub.

There are besides these a number which are found in several of these systems. The trouts and suckers are, however, different for each system. Taking up the different species used for food separately:

ACIPENSERIDÆ, OR STURGEON.

The sturgeons are among the largest of the fresh-water fishes. Like the salmon they spend some of their time in the bays and ocean, and ascend the streams to spawn. There are two species found on the Pacific Slope, to which they are confined, those in the eastern rivers being quite distinct.

Acipenser transmontanus Richardson. White Sturgeon.

This sturgeon is said to reach a weight of six hundred pounds. It is almost daily brought into the San Francisco markets. Those offered for sale vary from two to seven feet in length. It is said to reach a length of twelve feet. It is sold in the restaurants as "tenderloin of sole." Large numbers enter all of the large streams from the Sacramento to the Frazier River.

Acipenser medirostris Ayres. Green Sturgeon.

This species is much rarer than the White sturgeon, but is not infrequently brought into the markets. It reaches as large a size as the preceding. The young of these two sturgeons differ greatly from the adult, and the young of the two species are not distinguished in the fish stalls. Dr. Jordan said ten years ago, that this sturgeon was reputed poisonous and not used for food. Although it is still looked upon with less favor than the White, or the sturgeon, it is no longer considered poisonous. This property is now ascribed to the young of this or of both species. The old can readily be distinguished from the White sturgeon by its rough skin and by the green band along the belly.

CATOSTOMIDÆ, OR SUCKERS.

The sucker is almost entirely a North American product; of the many species only two are found elsewhere. The suckers found in California are all species peculiar to the western slopes of America. The Buffalo fishes, which belong to this family, are not found on the Pacific Slope. All the species are more or less valuable as food. The California suckers all belong to the genera *Catostomus* and *Chasmistes*, and each river system has one or more which is peculiar to it. The majority ascend small streams in spring to spawn.

Catostomus arxopus Jordan. Kern River Sucker.

This is a small sucker, about thirteen inches long. Very little is known about it as yet.

Catostomus rex R. Eigenmann.

This sucker, reaching a length of three feet, is abundant in Tule Lake, and ascends the Lost River.

A specimen has lately been procured for the Academy of Sciences, through the kindness of Mr. Woodbury, of the Fish Commission.

Catostomus occidentalis Ayres.

This is the common Sacramento sucker, or "the sucker" of the San Francisco market. It is abundant in the whole Sacramento Valley, and descends some distance into tide water. I have taken it at Mare Island. It is not greatly esteemed as food.

Catostomus tahoensis Gill and Jordan. Tahoe Sucker; Red-sided Sucker; Black Sucker.

This sucker is found in the Truckee Basin. It ascends the rivers and rivulets tributary to Lakes Tahoe and Donner in June to deposit its spawn. The very young of this species are quite black; the half grown have a bright red stripe along the sides. In the early part of June these half grown ascend the small rivulets in such abundance that the Indians and others catch large quantities by placing a sack across one of the streams and then driving them down. The larger ones have the red lateral stripe less conspicuous than the half grown. They ascend the rivers at the time the young ones ascend the rivulets. In June none were seen in Lake Tahoe, and but few were being taken in Donner Lake. A few were taken in the Fish Commission's traps in June, and great quantities were seen in Donner Creek, especially in all deep holes.

Chasmistes brevirostris Cope.

This is a small sucker, reaching the length of sixteen inches. It is abundant in Klamath Lake, but does not ascend Williamson's River in spring.

Chasmistes luxatus Cope.

This sucker is also found in Klamath Lake, but reaches a much larger size, nearly three feet. "It ascends the streams in thousands in the spring, and is taken and dried in great numbers by the Klamath and Modoc Indians."

CYPRINIDÆ. The Carps or Minnows.

The American members of this family are mostly small, bony fishes, not fit for food. In the waters of the western slopes some of them attain a large size, however, the Sacramento pike reaching a length of five feet. They are usually very abundant where they are found at all, and form an important item of the food of larger fishes. The most important member of the family is the German carp, a native of Central

Asia, which has been copiously introduced into Europe and America. A large number of the species found in California are more or less valued as food, and are at times brought to the San Francisco markets.

Orthodon microlepidotus Ayres.

This is a small species, reaching a length of fourteen inches. It is abundant in the Sacramento, and is occasionally found in the San Francisco markets.

Lavinia exilicauda Baird and Girard.

This species resembles the preceding in size and distribution.

Pogonichthys macrolepidotus Ayres. Split-tail.

This is one of the commonest of the minnows. It is at once recognized by its widely forked tail.

Mylopharodon conocephalus Baird and Girard.

This is one of the largest of the *Cyprinidæ*. It is said to reach a length of eighteen inches. It is rarely brought to the San Francisco market.

Ptychocheilus oregonensis Rich., and *harfordi* J. and G. Sacramento Pike; Whitefish.

There are two varieties of pike brought to the markets, but they are not distinguished by the fishermen. They are called pike from their resemblance to the true pike, from which they are, however, quite distinct, and to which they are not at all related. *P. oregonensis* is said to reach a length of five feet.

SALMONIDÆ. Salmon, Trout, and Whitefish.

The *Salmonidæ* embrace the most important of our fish, both as regards food and sport. The genera which in California are of greatest value are *Coregonus*, *Oncorhynchus*, *Salmo*, and *Salvelinus*. They can readily be distinguished from our other fresh-water species by the adipose fin, and by the presence of scales. The genera found in California may be distinguished by the following characters:

- a. Jaws toothless; scales rather large; habitually living in fresh water *Coregonus*, or Whitefish.
- aa. Jaws with distinct teeth.
- b. Anal fin elongate; fourteen to seventeen rays, the tip of the highest ray rarely extending beyond the base of the last *Oncorhynchus*, or salmon.
- bb. Anal fin shorter; of nine to eleven developed rays.
- c. Vomer flat; its toothed surface plane; teeth on its shaft in pairs, or in a zig-zag row; tip of the highest anal ray usually extending beyond the tip of the last ray *Salmo*, or trout.
- cc. Vomer boat-shaped; its shaft strongly depressed; teeth on chevron only *Salvelinus*, or Charms, or Brook trout.

Unfortunately there is a confusion of names due to localities and variation in the species of this family which is frequently misleading. To this is to be added that very little is known as yet concerning the California trouts, so that many writers, basing their remarks on a few pickled specimens, have increased the confusion rather than helped us.

To this must also be added that the excellent figures accompanying many of the reports, and which pretend to give the differences, are based on specimens which differed widely in size, and are therefore misleading. This last fact has undoubtedly much to do with the confusion existing in regard to the Steel-head trout and Brook trout.

The discussions whether a given fish may be a trout or Salmon trout while edifying to the man talking or writing, does not help us in the least to clear this matter.

In this connection it may be worth our while to examine the remarks of Dr. Günther on the variability of the species of the genus *Salmo*, remarks which Dr. Jordan had occasion to quote when studying these same fishes:

There is no other group of fishes which offers so many difficulties to the ichthyologist, with regard to the distinction of species, as well as to certain points in their life history, as this genus.

The almost infinite variations of these fishes are dependent on age, sex, and sexual development, food, and the properties of the water. * * * The coloration is, first of all, subject to variation, and consequently this character but rarely assists in distinguishing a species, there being not one which would show in all stages of development the same kind of coloration. The young of all the species of this genus are barred, and this is so constantly the case that it may be used as a generic, or even as a family character, not being peculiar to *Salmo* alone, but also to *Thymallus*, and probably to *Coregonus*. The number of bars is not quite constant, but the migratory trout have two (and even three) more than the river trout. When the salmon has passed the "parr" state, the coloration becomes much diversified. The males, especially during and immediately after the spawning time, are more intensely colored and variegated than the females, specimens which have not attained to maturity retaining a brighter silvery color, and being more similar to the female fish. Food appears to have less influence on the coloration of the outer parts than on that of the flesh; thus, the more variegated specimens are frequently out of condition, whilst well fed individuals, with pinkish flesh, are of a more uniform, though bright coloration. Chemistry has not supplied us yet with an analysis of the substance which gives the pink color to the flesh of many salmonoids; but there is little doubt that it is identical with, and produced by, the red pigments of many salt and fresh-water crustaceans which form a favorite food for these fishes. The water has a marked influence on the colors. Trout with intense ocellated spots are generally found in clear, rapid rivers, and in small, open, alpine pools; in the large lakes, with pebbly bottom, the fish are bright-silvery, and the ocellated spots are mixed with, or replaced by, X-shaped black spots; in pools or parts of lakes, with muddy or peaty bottom, the trout are of a darker color generally, and when inclosed in caves or holes they may assume an almost uniform blackish coloration. The brackish, or salt water, has the effect of giving them a bright-silvery coat, without or with comparatively few spots, none of which are ocellated. * * *

With regard to size the various species do not present an equal amount of variation. Size appears to depend on the abundance of food, and the extent of water. Thus, the salmon and the different kinds of Great Lake trout do not appear to vary considerably in size, because they find the same conditions in all the localities inhabited by them. * * *

The proportions of the various parts of the body to one another vary exceedingly in one and the same species. * * * The fins vary to a certain degree. * * *

Finally, to complete our enumeration of these variable characters, we must mention that in old males, during and after the spawning season, the skin on the back becomes thickened and spongy so that the scales are quite invisible, being imbedded in the skin.

Coregonus williamsoni Girard. Whitefish.

This fish is abundant in Lake Tahoe. It spawns in October and November in the tributaries of the lake. During the remainder of the season the adult is probably found in deep water. In June, schools of individuals, nine inches long, were seen on the eastern shores of the lake. In the evening when swarms of gnats were blown into the lake these Whitefish rose to them. A few were caught at the time with small hooks baited with fly. It reaches a length of nearly fifteen inches, and weighs about a pound. It ranks high as a food fish. Mr. Henshaw says of it

At Lake Tahoe it was found very abundant in October, being met with at that season in all the few streams that rise from the lake. * * * This month, and later,

their spawning season, and as they pass up many are intercepted by the Indians, who find a market for considerable numbers in the settlements and logging camps about the lake. Having constructed a suitable net of mosquito netting, which is affixed to a long pole, the Indian, accompanied by one or two squaws, proceeds to the stream where it is sufficiently narrow for his purpose. Placing the net at the head of one of the deep sandy-bottomed pools which are found at every turn of the stream, he awaits quietly till all the fish near by have been frightened into it by the squaws, who advance from below, and beat the water with sticks. With a sudden scoop he usually empties the pool, taking perhaps from six to a dozen fish from each. All that we saw caught in this manner were quite small, averaging perhaps ten inches in length, but they attain a much larger size.

ONCORHYNCHUS. Pacific Salmon.

The members of the genus *Oncorhynchus* are confined to the North Pacific and the rivers flowing into it. They are generally termed salmon without distinguishing them from one another, or from the salmon of New England and Europe. They are by far the most important food fishes, and the Quinnet salmon probably surpasses in value all of our other fresh-water fishes combined.

Four of the five species known are found in the Sacramento; one of these is, however, only occasionally taken.

All of these species live in the sea, and ascend the rivers only at the spawning season. The Quinnet salmon enter the Sacramento in the spring and summer, and the run ceases, according to Jordan, in October. The larger individuals enter the river first, and the smaller ones, two feet long, do not run till July and August. Jordan says:

The spring salmon ascend only those rivers which are fed by the melting snows from the mountains, and which have sufficient volume to send their waters well out to sea. Such rivers are the Sacramento, Klamath, * * * etc.

Those salmon which run in the spring are chiefly adults (supposed to be at least three years old). Their milt and spawn are no more developed than at the same time in others of the same species which will not enter the rivers until fall. It would appear that the contact with cold fresh water when in the ocean, in some way caused them to turn toward it and to "run" before there is any special influence to that end exerted by the development of the organs of generation.

High water on any of these rivers in the spring is always followed by an increased run of salmon. * * * The average weight of the Quinnet in the Sacramento in the spring is sixteen pounds.

Those fish which enter the rivers in the spring continue the ascent until death or the spawning season overtakes them. Probably none of them ever return to the ocean, and a large proportion fail to spawn. They are known to ascend the Sacramento as far as the base of Mount Shasta, or to its extreme headwaters—about four hundred miles.

At these great distances, when the fish have reached the spawning grounds, besides the usual changes of the breeding season, their bodies are covered with bruises, on which patches of white fungus develop. The fins become mutilated, their eyes are often injured or destroyed, parasitic worms gather in the gills, they become extremely emaciated, their flesh becomes white from the loss of oil, and as soon as the spawning act is accomplished, and sometimes before, all of them die.

Dr. G. Brown Goode says of this fish:

Fifty years ago it was hardly known, except to students of natural history. Now it is known and eaten almost all over the world, for there is hardly a port in the world where ships have not carried the canned salmon of the Columbia, which is the same fish under a different name; and not only has this fish, in the form of food, traveled nearly all over the world, but the living embryos of the California salmon have been transported to England, France, Germany, Belgium, Denmark, Russia, Australia, and New Zealand, so that there is probably no one fish inhabiting a limited locality which is known over the world in so many different places as the California salmon.

The four species of *Oncorhynchus* found in the Sacramento are distinguished by the following characters:

- | | |
|--|-------------------|
| a. Scales small, lateral line more than 200 | <i>Gorbusha</i> . |
| aa. Scales large, lateral line 125-155. | |
| b. Pyloric caeca 50-80; lateral line 125-135 | <i>Kisutch</i> . |

bb. Pyloric cæca 140 or more.

c. Anal rays 13-14; branchiostegals 13-14

cc. Anal rays 16; branchiostegals 15-19

Oncorhynchus gorbuscha Walbaum.

This, the Humpback salmon, is only occasionally taken in the Sacramento and Columbia. It runs every other year in Puget Sound. It reaches a weight of three to seven pounds.

Oncorhynchus kisutch Walbaum. Silver Salmon.

This salmon runs in the Sacramento in summer and fall; it does not exceed eight pounds in weight, and many are doubtless confounded with the young of the Quinнат. From this they are, however, readily distinguished by the number of cæcal appendages about the stomach, which scarcely exceeds seventy-five in this species, while there are more than one hundred and twenty-five in the Quinнат. Mr. Chas. Ohm took the young of this species, five and seven eighths inches long, in Paper Mill Creek, on March 24, 1890.

Oncorhynchus keta Walbaum. Dog Salmon.

I have not yet seen any fresh examples of this species. It is said to be abundant in the fall from the Sacramento northward, when it ascends all the streams for a short distance. It does not begin to "run" until its sexual organs are well advanced in development and its flesh proportionately deteriorated. For this reason it is of no great economic value.

Oncorhynchus tshawytscha Walbaum. Quinнат Salmon.

This is the salmon par excellence, and, like *Salmo salar*, "stands pre-eminent, like a Highland Chieftain, needing no name save that of his clan." It is still "The Salmon," "Quinнат Salmon," and "King Salmon" when ready to be eaten, "Columbia Salmon" or "Alaska Salmon."

What I have said under the head of the genus *Oncorhynchus* in general applies to this species especially. I have caught the very young of this species (about two inches long) at Mare Island, on April 17, 1890.

SALMO.

The species of this genus are variously named by the fishermen. The young taken in the mountain streams are all Brook trouts, or Rainbow trouts; the old ones are Trout, Steel-head, Salmon trout, and even Salmon, and a special series of names has been invented in Lake Tahoe.

It is concerning the members of this genus that there was such discussion in the papers during last spring. For practical purposes, all the species of this genus may be classed as one, and covered by a general law protecting trout. All the rules of the angler will not suffice in distinguishing the species, and such practical experiments as scraping the scales with the thumb nail to distinguish Brook trout from Salmon trout, are perfectly useless. Every angler knows how variable the trouts are in the different streams and ponds, and Dr. Günther's words, quoted above, are but the expression of the experience of every naturalist, as well as of every angler. Through the courtesy of Mr. Charles Ohm,

have been able to examine about seventy-five Brook trouts from different streams, and others have come into my hands from Mr. Belding. Although the alcohol has obliterated most of the color markings, it can still be seen that no two streams have trout with exactly the same characters. To add to the confusion, the young of the salmon greatly resemble the trouts, and the old trouts greatly resemble the salmon. Young salmon have been brought to me as Brook trouts; and I bought a splendid Brook trout, nineteen inches long, which the fish dealer declared was a salmon, and willing to prove it by as large a bet as I would name.

I do not know where trouts have been planted, and where those so planted were procured, but the native species are distributed as follows:

1. The Brook trout, or Rainbow trout (*Salmo gairdneri irideus* Gibbons), in all mountain streams west of the Sierra Nevada from Mount Shasta to Lower California.

2. The Steel-head (*Salmo gairdneri* Richardson), from the Sacramento northward.

3. The Northern trout (*Salmo purpuratus* Pallas), from Mount Shasta northward.

4. The Tahoe trout (*Salmo purpuratus henshawi* Gill and Jordan), in the Truckee Basin, including Lakes Tahoe, Donner, Pyramid, and possibly Eagle.

It is thus seen that three of the trouts inhabit contiguous territory, while the other, the Steel-head, overlaps the territory of two of the species. There are, however, so many forms which are intermediate between the Brook trout proper and the Steel-head that the former may be looked upon as simply a southern form of the latter, or, conversely, the latter a northern form of the former.

These species and varieties are extremely hard to distinguish unless specimens of the same size are at hand. They may be determined by the following technical characters arranged by Dr. Bean:

a. No hyoid teeth.

b. Anal rays, 12; depth of body equals length of head in young; tail of adult truncate *S. gairdneri*; Steel-head.

bb. Anal rays, 10; depth of body much exceeds length of head in young; tail of adult forked *S. gairdneri irideus*; Brook, or Rainbow trout.

aa. Hyoid teeth.

c. Head short; scales, not more than 170; gill rakers, 8-12; cæca, 20 *S. purpuratus*; Northern trout.

cc. Head long, conical; scales, sometimes 184; gill rakers, 9-14; cæca, 50-60 *S. purpuratus henshawi*; Tahoe trout.

Salmo gairdneri Richardson. Steel-head Salmon.

This trout is not infrequently brought into the San Francisco market during the close season. At other times it is not so abundant, and in summer and fall it is rarely seen. It reaches a weight of twenty pounds. The California Academy of Sciences possesses a large specimen, the gift of Mr. Charles Ohm. It measures two feet five inches in length, and is a spent male.

There are several others smaller than this in the Academy's collection, presented by the same gentleman. It is more slender than the Rainbow trout or the Quinнат salmon, and does not ascend streams to any great distance.

Very little or nothing is known of the habits and life history of this species, and any notes on its migration, etc., ought always to be kept.

The young have very rarely been found, a fact which has led many to believe that the Brook trout are only the young of this species, especially as the latter are always, or usually, found in abundance in the same streams.

Salmo gairdneri irideus Gibbons.

This is the Rainbow or Brook trout proper. It is also known by various other names. There is no difficulty in distinguishing the adult of this species from the adult of the Steel-head, but the half grown are remarkably alike, and intergradations of all sorts are abundant. It does not attain nearly the size of the Steel-head, the largest recorded weighing but six pounds. These large examples are very rare. I have seen only one in the markets of San Francisco, and, as I have stated above, this was represented to be a young salmon.

The young are caught in large numbers in all the trout streams in Central and Southern California. It probably does not enter salt water as readily as the Steel-head, but it probably runs into the sea from short rivers which are dry in summer, and from others having a continuous stream of clear water.

It is a most excellent table fish, but not caught in quantity for the market. Its chief value seems to be to offer sport to anglers, and this is said to be of a very tame kind. It has been extensively introduced and seems to flourish in many eastern streams. Specimens have been taken in salt water near Oakdale, Long Island.

It varies more in size, color, etc., with the stream it inhabits than any other fresh-water fish.

Mr. Henshaw says of this species:

This is the common Brook trout of the small mountain streams of the Pacific Slope, and up to an altitude of nine thousand feet it is the rare exception to find a suitable stream that is not well stocked with it. Upon many of them, as the tributaries of the South Fork of the Kern River, these trout are found in very great abundance, each pool and rapid numbering its finny denizens by the score. They may be taken in any sort of weather, at any hour of the day, by almost any kind of bait. During the heat of the day they frequent almost entirely the deeper pools, lying under overshadowing rocks or in the shade of some convenient log. In early morning or late afternoon they come out and run more into the shallows and rapids, under which circumstances they bite best and afford the finest sport. Like the average Brook trout the species rarely attains any considerable size, ranging from four to eight or more inches in length. Their colors are usually very bright, and for beauty this species takes rank among the foremost of its kind, and has well been called the Golden trout. In this respect, however, it is subject to the usual variation obtaining in the family, the change of color not only accompanying a difference in locality, but being plainly discernible in individuals taken in different parts of the same stream not far distant. In fact, as a specific character, color in this family seems to be at its lowest value. The character of the bottom and water itself has much to do with this, and I remember to have fished in a small rivulet on one of the sub-alpine meadows not far from Mount Whitney, whose sluggish waters flowed over a bottom of dark mud, in which the color of the trout simulated very closely its hue; they had lost nearly all the flashing iridescent tints characterizing the same species caught but a few hours before in another stream, and had become dull and somber-hued. Accompanying this change of color was a correspondingly noticeable difference in the habits and motions, and the several dozen trout caught that evening for supper were taken out by the hook with the display of very little more gaminess than would be noticed in so many Horned pout. On the contrary, in the clear rapid current of the mountain stream, a flash of sunlight is scarcely quicker than the gleam of gold and silver, seen for a single instant, as the whirling waters are cut by one of the trout as he makes a rush from his lurking place for some chance morsel which is being borne past him. The western trout are rarely as shy as their relatives of eastern waters, and because of their numbers and consequent scarcity of food are apt to be less fastidious; yet even when most abundant due caution must be used if one would be successful, and not every one can catch trout even in the West. With the proper care in concealing one's self a pool may be almost decimated ere the alarm will be taken, and I have seen fifteen fair sized trout taken from a single small pool in quick succession.

Salmo purpuratus Pallas. Oregon Brook Trout; Salmon Trout; Lake Trout.

I know nothing personally of this fish. It "is very abundant in all the waters north of Mount Shasta, and through the Great Basin and Rocky Mountain region; occasionally southward to Santa Cruz." It seems to have skipped California, except some parts of it; is found in abundance to the north of us, and extends farther south than any other salmon, having been "obtained by Professor Lufton from streams of the Sierra Madre, Mexico, at an elevation between eight and nine thousand feet in the southern part of Chihuahua, near the boundaries of Durango and Sinaloa." It occasionally reaches a weight of twenty-five pounds in the Columbia. These large ones are known as Steel-head, the young as Brook trout, and the partly grown as Salmon trout. It is of considerable importance economically, and its introduction into all streams suitable to it is to be recommended.

Salmo purpuratus henshawi Gill and Jordan.

This, the Lake Tahoe trout, is of greater economic importance than the others. It is abundant in the San Francisco markets all through spring. The fishermen of Lake Tahoe keep their catch alive till they have a sufficient number to warrant a shipment, when they are killed, boxed, and shipped to San Francisco. The past year one company had the entire control of the Tahoe catch.

This fish is known under various names to the fishermen and anglers of Lake Tahoe, who consider the variations, due to age, sex, depth of water, and character of bottom, all of specific value. If we keep in mind, however, the statements made by Dr. Günther, all the variations can easily be explained. The trout reported to me while at Lake Tahoe last June were: First, the Big Black trout, reaching a weight of twenty-nine pounds, and spawning in the rivers in April and May. Second, the Red trout, probably not exceeding a weight of seven pounds, which spawns in the streams from May to the first of August. Third, the Pogy or Porgy, weighing one and a half to two pounds, and spawning the latter part of August and during September. Fourth, the Silver trout, reaching nearly seventeen pounds in weight, and spawning in the lake in October and November. Fifth, the Yellow Belly or Sulphur Belly, the time and place of spawning not determined. Sixth, the Brook trout, found in the streams about Lake Tahoe.

In this connection I can but quote, with slight modification, what we have said elsewhere—"San Francisco Chronicle," August 31, 1890:

The so called Big Black trout we did not see. The eggs of this large trout are larger than those of the Red trout, and grayish in color; the young are also gray. The eggs and young of the Red trout are almost cherry red, and the pigment of the young, reared in the hatchery, is much more developed than in those of the big trout. The facts brought to our notice would seem to indicate that the big trout is a species distinct from the Red trout. It would not, however, be surprising if this should prove to be only the adult form of the Red trout. The difference in the size of the egg, and in the time of spawning, is not without its parallel in sea fishes, and the difference in color is, as we have seen, easily accounted for.

The Red trout has meat of a light pink color. The branchiostegal membrane is bright red. The females which have deposited their ova are quite silvery, while the males which have spawned are of a dark cherry color on the sides, darker above and lighter below. All the numerous individuals seen were pretty uniformly spotted.

The Porgy is unquestionably the young Red trout during its first spawning season. "It is so fat that it may be fried in its own grease." The later time of spawning is readily accounted for by the youth of the Porgy, while its place of spawning (in the lake) is made

a necessity by the fact that, in all but unusually late seasons, like the present, the streams emptying into the lake become dry by the time this fish is ready to spawn. In color the Porgy is intermediate between the male and female trout, but the spots are much less regular.

The Silver trout may readily be distinguished at a glance in life, but the Porgy is readily taken for a Silver trout when life is extinct. Two Porgies purchased at the wharf of Tahoe City appeared to be Silver trout when they reached our hotel. The meat is of a salmon color. Many of the Silver trout are, without any doubt, the Red trout at a stage younger than the Porgy. If the assertion be true, that the Silver trout attains a weight of seventeen or eighteen pounds, the lack of color is doubtless due to the surroundings.

The Yellow-belly is a Silver trout from a different bottom, which has changed the silvery to yellow.

The Brook trout of this region are merely the young of the Red trout. They are quite distinct from the true Brook trout (*Salmo trideus*).

It will thus be seen that the trout of Tahoe belong at most to only two species, and very possibly to a single one.

At the fish hatchery of the State Fish Commission, located at Tahoe City, thousands of trout are now being hatched. The troughs at the hatchery are filled with the trout in all stages of development, from the currant-like egg to the food-hunting fish an inch long, which has lost its yolk-sac, or source of nourishment.

Salvelinus malma Walbaum. Dolly Varden; Red-spotted Trout.

This is another species concerning which I have no personal knowledge. It is indigenous to the region west of the Cascade Range, from Northern California to Alaska. According to Goode it is the most important of our chars, next to the Eastern Brook trout. It descends to the sea, and reaches the weight of fourteen pounds, but in the mountain streams it spawns at a length of six or eight inches. They are reported to spawn late in the fall in the rivers.

CENTRARCHIDÆ. The Sunfishes.

Archoplites interruptus Girard. Sacramento Perch.

This is the only California representative of the numerous species of sunfishes inhabiting North America. It is found throughout the Sacramento and San Joaquin Valleys, and descends to tide water. It is not frequently brought into the market, and is of no great economic value.

HOLCONOTIDÆ. Viviparous Perches.

Hysterocarpus traski Gibbons. Viviparous Perch.

The economic value of this fish is entirely incommensurate with its scientific interest. It does not reach a large size. It is found throughout the Sacramento Valley. It is the only American fresh-water representative of the viviparous family *Holconotidæ*, of which there are so many species along the entire coast of California. While all our other fresh-water fishes deposit spawn, this species brings forth living young in an almost mature stage.

Its characters have been so changed, probably by its permanent stay in fresh water, that it now represents a sub-family quite distinct from its marine relatives.

COTTIDÆ. Sculpins.

The members of this family are mostly marine, and species of *Cottidæ* abound along the entire coast of California. Some of them reach a large size, and are brought into the markets; but most of them are small and of no importance.

COTTUS. Bullheads; Miller's Thumbs.

The remaining species of fresh-water fishes are all small, and only indirectly of economic interest. Our account of the one found at Lakes Tahoe and Donner will serve for them all.

Large individuals (about seven inches is large for this fish) are especially abundant near the hatching house of the Fish Commission, where the dead trout eggs are thrown each day. A handful of trout eggs is certain to bring a bullhead from under every stone in the vicinity. This fish is related to the *Oligocottus analis*, a marine species of bullhead living in tide pools on the coast of California, which changes, according to food and surroundings, from a grass-green to gray of various patterns. The changes in color of *Cottus minutus* are no less striking. Over a muddy bottom this species is quite black, assuming a drab or "sand color" over sandy bottom; while over rocks and pebbles it is conspicuously banded with light and dark. The bullheads are very destructive to the trout. They lie in wait for them at the mouths of creeks for the descent of the young ones. The bullheads, in their turn, form the principal food of a species of *Eutenia*, abounding on the shores of the lake.

WHY SALMON ARE SCARCE.

LETTER FROM DR. H. W. HARKNESS, PRESIDENT OF THE CALIFORNIA ACADEMY OF SCIENCES.

Upon reëxamining the subject, with the view of determining the cause for the scarcity of salmon in our rivers, we find that the principal agent engaged in their destruction is man.

Man accomplishes this in various ways—by the fouling of the rivers by manufactories, by dams or other obstructions, and chiefly by seine fishing.

The modern appliances are so perfect, and the pursuit of fish so active and persistent, that we are convinced that should the fishermen comply with the law in every particular, even then the salmon would disappear altogether from our waters; but when we take into consideration the fact that all unfair means are resorted to for the purpose of increasing the catch, we are no longer at a loss to account for their scarcity.

If our fishermen would but pay a decent respect to the laws, and furthermore would capture only a sufficiency for the supply of the market with fresh salmon, our rivers, with assistance from the State in the way of restocking at intervals, might still continue to be productive for an indefinite period.

There is one source of waste, as we look upon it, however, which should be prevented by the authorities, viz.: the canning interest. From time to time the Government has expended large sums of money for the purpose of stocking our rivers with salmon. This is the act of a paternal government with the sole idea, as we view it, of furnishing to all of the inhabitants of the State, so far as it is possible to do so, an opportunity for supplying the table with a cheap, nutritive article of food.

The taxpayers at large are called upon to pay the cost, and all are alike to share in the benefit. Let us examine for a moment, to see if there is a fair distribution of the results of this outlay. If, as has been previously stated, after the stocking of the rivers, fishing was conducted in accordance with the laws (fishing being prohibited during certain days, in order that a percentage of the breeding fish might escape); also, that the close season should be strictly observed, and further, that the exportation of fish should cease under these conditions, we believe that our rivers would, for an indefinite period, continue to furnish salmon in quantity sufficient to meet the home demand.

No sooner, however, does the salmon appear in tolerable abundance than the canner begins his work. Either by hiring boats and fishermen himself, or by offering tempting rewards to the fisherman for his catch, he is enabled to cover the river with boats in such numbers as to capture a large proportion of the product of the stream before they can pass his establishment.

If the fish so captured from the Government preserves were distributed as canned provisions among our people, there would be some slight

excuse; but when we come to learn that all, or nearly all, are shipped away to foreign countries, we begin to realize that the people are being defrauded of their just dues.

The canner may claim that he is realizing but a small percentage of profit, or he may affirm that he has met with material loss, yet this has nothing to do with the subject. He is responsible for the increase of the price of fresh fish, and he is to be blamed for the final exhaustion of the rivers. There is no river, however rich it may be in salmon, but must eventually become impoverished if the canner is to be allowed to pursue his vocation, even when under limited Government surveillance.

During one year, some time back, there were two thousand men and one thousand boats engaged in the salmon fisheries of the Sacramento River alone. How many of these were employed by the cannery we are unable to determine. As his means of canning fish are practically unlimited, and he has the world for a market, the canner has but to increase his fishermen until the stream is so far exhausted as to be of no further value.

In our judgment, the business of the canner should cease, or else the Government should abandon the plan of stocking the rivers when the results are so unsatisfactory.

We feel that this is a question of the greatest importance, and that the attention of the authorities should be called to it, and that the facts should be set forth so clearly as to induce them to take steps to remedy the evil.

To illustrate the case still more fully, we will suppose that our rulers should, while acting in the capacity of a paternal government, determine to set aside a large tract of land for a deer park, where large bands of these animals might be cared for with the view ultimately that venison should be furnished cheaply at certain seasons to the people of the State. What would be said of the economy of such a proceeding if the Government, during the hunting season, should permit individuals to kill the deer without hinderance for the purpose of canning the flesh so secured and sending it away to a foreign market?

TENTH ANNUAL REPORT

OF THE

STATE BOARD OF PRISON DIRECTORS

OF THE

STATE OF CALIFORNIA,

FOR THE

FORTIETH FISCAL YEAR, ENDING JUNE 30, 1889.

SACRAMENTO:

STATE OFFICE : : : J. D. YOUNG, SUPT. STATE PRINTING.

1890.

STATE BOARD OF PRISON DIRECTORS.

ROBERT T. DEVLIN Sacramento.
CHARLES SONNTAG San Francisco.
EDGAR J. DePUE San Francisco.
A. E. SHATTUCK San Francisco.
JOSEPH CRAIG Woodland.

OFFICERS OF THE STATE PRISON AT SAN QUENTIN.

JOHN McCOMB Warden.
BEN. CHAMBERS Deputy Warden.
J. V. ELLIS Clerk.
ED. REDDY Adjutant.
F. C. DURANT, M.D. Resident Physician.

OFFICERS OF THE STATE PRISON AT FOLSOM.

CHARLES AULL Warden.
W. W. CUNNINGHAM Clerk.
W. H. ROBINSON Deputy Warden.
RICHARD J. MURPHY Captain of the Guard.
T. B. EAGLE Visiting Physician.
GILES G. CRANDALL Commissary.
BRINARD F. SMITH Secretary.

REPORT.

NOVEMBER 15, 1889.

To his Excellency R. W. WATERMAN, Governor of the State of California :

The State Board of Prison Directors beg leave to submit herewith their annual report for the fiscal year ending June 30, 1889, with copies of the reports of the Wardens and Clerks of the respective prisons at San Quentin and Folsom.

Your Excellency will find that these reports are very complete, covering in detail a history of the work accomplished in the prisons during the year just past. For this reason, much of the labor in the way of a full report, that otherwise would fall upon us, has been saved ; still, however, we shall trespass upon your time to call your attention, briefly, to some of the more salient features connected with prison management.

At San Quentin, in years past, various industries have been followed, but in February of this year it was deemed best to abolish all industries, save the manufacture of jute fabrics. Accordingly, after full consultation with your Excellency, a resolution was passed abolishing all kinds of productive labor, save that just mentioned. From that time on, the labor of convicts at San Quentin has been devoted solely to the manufacture of jute goods.

The system of working convicts, both by day and by night, has proven a complete success.

This is no longer an experiment, but the facts and figures submitted in the annexed reports, as well as the examination made by the expert appointed by yourself, show that the cost of bags manufactured by night is practically the same as the price of those manufactured by day.

A glance at the Clerk's report will show that not only has this industry been useful in saving farmers from paying exorbitant prices for bags, but at the same time has been highly remunerative to the State.

In our last report we made suggestions for the purchase of additional land and the erection of new buildings. The matters there submitted were very fully considered by the Legislature, and the result was that appropriations were made for the purchase of additional tide lands and for the erection of necessary structures.

Most of the purchases authorized by the appropriations mentioned have been made.

The Legislature, recognizing the necessity of making provision for insane criminals, passed an Act, appropriating a certain sum for that purpose. It will not be questioned, at this day, that a separate institution is necessary for this class of prisoners. The testimony of Superintendents of insane asylums shows that these institutions have not the facilities for properly guarding insane criminals, nor has a prison the opportunity for treating them properly, from a sanitary point of view. We regret to say, however, that the appropriation is scarcely adequate to give to the State an institution of the size and character that this should be. Plans have been

drawn for the erection of a building, at an estimated price that will bring it within the limits of the appropriation. These plans have not, however, yet been definitely adopted by the Board.

Plans have been drawn and adopted for the other buildings, for which appropriations were made by the last Legislature, and some of the structures are now in process of erection.

At Folsom, the work on the dam and canal, mentioned in our previous report, has been, during the past year, vigorously prosecuted.

It is unnecessary at this time to speak of the value the State will derive from this work when completed. The report of A. W. Von Schmidt, printed in our last report, removes this fact beyond the realm of conjecture.

A considerable portion of the tract of this prison has been set out in fruit trees, and a still greater quantity will be set out during the coming year.

An Act of the Legislature, last session, made an appropriation of \$112,500 for the purpose of purchasing materials for the construction of a power house, in order to utilize the waters of the American River for power purposes, and also for the purchase of wheels, machinery, and pipes necessary to supply the prison with water, and for piping necessary to supply the power for running electric lights for the prison, and iron-stone pipes for sewers.

Some time ago the Board employed P. A. Humbert, civil engineer, to draw up plans and specifications for a power house, and for the construction of machinery to utilize the power belonging to the State. These plans and specifications have been submitted to the Board, and work thereon will soon be commenced.

Among other duties placed upon the Board of Prison Directors, at the last session of the Legislature, was that of purchasing a site for a School of Industry for boys, at or near Ione.

We refer to the fact with some pleasure, that the views contained in our last report, showing the absolute necessity for the establishment of such an institution in this State, which were in full accord with those expressed in your message to the Legislature, were received and acted upon by the members of that body.

The Act referred to provided that the site to be selected should, among other things, have water facilities sufficient for the uses of said school, and for power in operating machinery.

This clause has given the Board a great deal of difficulty, for the reason that it requires, to some extent, the examination of an expert to determine what facilities each site possesses in this respect.

For the purpose of determining this fact, the Board employed A. W. Von Schmidt to make an examination, and his report has just been received, but no action thereon has yet been taken.

The urgent necessity for the establishment of an institution for the young boys who have not yet become adepts in crime, in order that they may be weaned from their evil paths, imbued with sentiments of morality, and taught some useful occupation, by which they may, in after years, earn their livelihood, is patent to every one who has given the least attention to the subject.

States that cannot compare with California, either in wealth or population, have schools of this character, and California is really behind her sister States in the matter of reformatory institutions.

It is useless to dilate upon this subject further, for your Excellency was among the first to call to the attention of the people of this State the necessity for the creation of such a school. The pages of this report will show

that many are found in both our prisons, who ought to be in an institution of this character, but, unfortunately, no provision is made elsewhere for them. When a young boy is convicted of felony, no institution, under the present condition of affairs, can receive him but the State Prison.

In conclusion, permit us to say, that we hope, before submitting our next report, to have carried out fully all the measures of improvement and reformation in our penal institutions spoken of in our last report, or for which provisions were made by the Legislature, and that we desire to acknowledge the many courtesies that you have extended to us.

Respectfully submitted.

REPORT OF THE WARDEN

OF THE

State Prison at San Quentin, California.

WARDEN'S REPORT.

WARDEN'S OFFICE,
SAN QUENTIN PRISON, August 1, 1889. }

To the honorable State Board of Prison Directors :

GENTLEMEN: It is very gratifying to me, in presenting my second annual report as Warden of the State Prison at San Quentin, embracing the period from July 1, 1888, to June 30, 1889, to be able to call your attention to the very satisfactory financial condition of the prison, as shown by the tabulated statements of the Clerk accompanying this report. The condition is all the more gratifying because an extraordinary return from the Manufacturing Department was needed to supplement the scant appropriation for the support of the prison for the next two years; and because, by this unprecedented success, it is possible to return to the State Treasury a portion of the surplus. The tables of the Clerk's report show the following resources on the thirtieth of June, 1889:

Cash in the State Prison Fund	\$168,923 66
Cash on hand and in bank	45,863 02
Due from sundry debtors	4,934 39

	\$219,721 07
Less liabilities on account unpaid bills and salaries	26,951 18

Leaving a net surplus of available cash resources at the end of the year of.... \$192,768 89

The amount of net earnings during the past year is larger than that of previous years, being \$103,098 59.

Against \$89,945 67 for the year ending June 30, 1888.	
52,158 76 for the year ending June 30, 1887.	
60,094 16 for the year ending June 30, 1886.	
58,986 89 for the year ending June 30, 1885.	

This increase in earnings was accomplished in the face of the loss of income from the sash and door factory—regarded as the most profitable industry ever pursued in this prison. By order of your honorable Board, the manufacture of doors, sashes, and blinds was peremptorily and finally discontinued on the first of March, and by that act an income of \$25,000 to \$30,000 a year was at once cut off. The action was taken to satisfy those who claimed that the labor of free citizens was interfered with and injured by the employment of our convict force. The operatives who were thrown out of employment by shutting down the sash and door factory were at once assigned to duty in the jute mill, and the result of their labor at the end of the year demonstrated that any apparent pecuniary loss sustained by the State on account of the abandonment of this discarded industry was fully made up by the increased earnings of the Jute Department, as shown in the following table, containing a synopsis of the output, sales, and profits realized from the sale of jute goods during the past three years:

	First Year Ending June 30, 1887.	Second Year Ending June 30, 1888.	Third Year Ending June 30, 1889.	Increase Second Year over First Per Cent.	Year over Second Year—Per Cent.
Number of yards burlap manufactured.....	2,180,047	2,951,414	3,619,015	35.4	22.6
Manufacturing expenses, exclusive of value of raw jute.....	\$36,805.17	\$48,648.17	\$69,841.26	32.1	43.0
Sales.....	\$131,625.43	\$180,047.78	\$273,510.41	36.7	51.0
Profit and loss.....	\$17,240.10	\$51,120.70	\$80,926.10	196.2	58.0

The apparent difference in this table between the rates of increase in output and manufacturing expenses during the past year over those of the previous year, is due to the very large advance at the beginning of the year in the price of coal required to operate the mill, this article forming one of the principal items in the manufacturing expense. The price of coal during the year ending June 30, 1888, had been \$6 65 per ton, whereas during the year just ended the price of the same coal was \$9 per ton. During the thirty-ninth fiscal year, ending June 30, 1888, the mill was operated with but one shift of men for eight and one half months, and with two shifts for three and one half months; and consumed coal to the value of \$13,301 82, or almost exactly two thousand tons at \$6 65. During the whole of the past year the mill was operated with two shifts of men, and although consuming only about 50 per cent more of coal (two thousand nine hundred and sixty-six tons), the value of the same was increased to \$26,697 79, a fraction over 100 per cent.

To more clearly demonstrate this, the manufacturing expenses for the two years were, as stated in above table:

	Year Ending June 30, 1888.	Year Ending June 30, 1889.
Manufacturing expenses.....	\$48,648 17	\$69,841 26
Deduct value of coal used.....	13,301 82	26,697 79
Leaving.....	\$35,346 35	\$43,143 47

Or an increase of 22.06 per cent in all expenses incurred in manufacturing jute goods, excepting cost of raw jute and coal, against an increase of 22.63 per cent in the output. This would indicate that all these expenses remained about the same, and that the increased cost of production is due entirely to the advance in the price of coal.

The sales of grain bags were conducted during the past season on the same plan as that adopted last year, and it is most gratifying to me to say that our efforts to sell only to direct consumers as far as possible, met the cordial approval and coöperation of the farmers of this State, who signified the same by sending in their orders for bags to such an extent, that at times they covered a large quantity in excess of our stock on hand, and in several instances we were compelled to decline acceptance of an order, as we could not guarantee against accident for so long a time in advance of possible manufacture.

A detailed statement of the operations of the jute mill is herewith submitted:

STATEMENT OF OPERATIONS OF JUTE DEPARTMENT FOR THE FISCAL YEAR ENDING JUNE 30, 1889.

Raw jute on hand July 1, 1888.....	5,302 bales.
Raw jute purchased and received since.....	3,945 bales.
Total.....	9,247 bales.
Less raw jute on hand June 30, 1889.....	1,408 bales.
Total.....	7,839 bales.
Less number of bales rejected on account damage.....	10½ bales.
Used in manufacturing during the year.....	7,828½ bales.
7,828½ bales at 400 pounds equals.....	3,131,400 pounds.
Less increase in amount of raw jute in process of manufacture on June 30, 1889.....	39,344 pounds.
Over amount on July 1, 1888.....	35,120 pounds.
	4,224 pounds.
Net amount of raw jute used during the year.....	3,127,176 pounds.

Goods Manufactured.

36,398 cuts = 3,567,004 yards 45-inch burlap; 525 cuts = 52,011 yards 40-inch burlap; total, 3,619,015 yards.
Three-ply twine, 4,148 pounds; five-ply twine, 121,809 pounds; of which amount 47,694 pounds were used in sewing bags, and 4,250 pounds in baling goods.
Number of grain bags made during the year out of burlap manufactured, 3,052,433.

Spinning and Weaving Expenses.

Coal.....	\$26,697 79
Jute oil.....	1,830 40
Sizing.....	3,392 14
Cotton twine.....	1,730 84
Machine oils and engineer's supplies.....	1,206 55
Tools and repairs.....	10,048 72
Gas.....	4,446 57
Salaries.....	12,115 26
Insurance.....	728 80
Miscellaneous (board of employes, stationery, etc.).....	1,280 33
Raw jute in process of manufacture (dye stuffs).....	111 82
	\$63,589 22
Less expense incurred in sewing bags and keeping sewing machines in repair:	
Say five per cent of coal.....	\$1,334 89
Say ten per cent of sizing.....	339 21
Say one hundred per cent of cotton twine.....	1,730 84
Say five per cent of machine oils, etc.....	60 33
Say ten per cent of tools and repairs.....	1,004 87
Say five per cent of salaries.....	605 76
Say ten per cent of gas.....	444 68
Say five per cent of miscellaneous.....	64 02
	5,584 60
Net expense of spinning and weaving 3,619,015 yards of cloth.....	\$58,004 62
Or 1.603 cents per yard.	

Sewing Expenses.

Percentage of gross spinning and weaving expenses, as per statement above.....	\$5,584 60
7,604 pounds twines manufactured and used in sewing bags, at \$4 15.....	1,979 30
Total expense of sewing 3,052,433 grain bags.....	\$7,563 90
Or 2.48 cents per bag.	

Baling Expenses.

Yards of 12-ounce cloth at 4.5103 equals.....	19,5446 cents.
Pounds of twine at 4.15 equals.....	2.60 cents.
Pounds of 8-ply manilla rope at 12. equals.....	18.00 cents.
Total (per bale).....	40.1446 cents.
Cost of baling one grain bag (500 in a bale).....	0.0803 cent.
Cost of baling one yard burlap (700 to 800 yards per bale).....	0.0535 cent.

Shipping Expenses.

Drayage credited to stock department.	
\$35 per month, on say 600 bales of goods (per bale)	5.83 cent
Freight on steamer to San Francisco (per bale)	25.00 cent
Total (per bale)	30.83 cent
Cost of shipping one grain bag	0.062 cent
Cost of shipping one yard burlap	0.041 cent

COST PRICE OF GOODS MANUFACTURED DURING THE YEAR ENDING JUNE 30, 1889.

45-Inch Burlap.

12 ounces of jute at 3.524 per pound	2.643 cent
Waste 10 per cent	0.2643 cent
Cost of spinning and weaving	1.603 cent
Cost, loose	4.5103 cent
Baling	0.0535 cent
Cost in bale	4.5638 cent
Shipping	0.041 cent
Cost delivered in San Francisco (per yard)	4.6048 cent

22x36 Grain Bag.

39 inches of 45-inch burlap, at 4.5103 cents per yard	4.8862 cent
Sewing	0.248 cent
Cost, loose	5.1342 cent
Baling	0.0803 cent
Cost in bale	5.2145 cent
Shipping	0.062 cent
Cost delivered in San Francisco (per bag)	5.2765 cent

TOTAL OPERATING COST OF JUTE MILL FOR THE YEAR ENDING JUNE 30, 1889.

Total expenses incurred, including value of supplies on hand July 1, 1888:

Raw jute	\$130,424 4
Raw jute in process of manufacture	1,382 1
Coal	27,330 1
Sizing	3,490 0
Jute oil	1,889 0
Cotton twine	1,859 0
Rope (bale)	1,237 0
Machine oils and engineer's supplies	1,245 2
Tools and repairs	15,063 8
Salaries	12,115 2
Gas	4,446 6
Insurance	728 0
Miscellaneous	1,298 8
Freight on manufactured goods	2,148 0

Less value of supplies on hand June 30, 1889:

Raw jute	\$20,081 55
Raw jute in process of manufacture	1,612 13
Coal	639 15
Jute oil	59 40
Sizing	98 47
Cotton twine	129 00
Rope	75 90
Machine oils and engineer's supplies	39 16
Tools and repairs	2,072 94
Miscellaneous	18 50

Net operating cost for the year

\$179,842

Divided as follows:

Value of raw jute used	\$110,342 89
Less increase in value of raw jute in process of manufacture	341 84
Net value of raw jute used in manufacturing	\$110,001 05
Spinning and weaving expenses	58,004 62
Sewing expenses	5,584 60
Rope used in baling	1,162 05
Freight on manufactured goods	2,148 00
New set of boilers and repairs on old boilers, as per bill of Union Iron Works, July, 1888	2,941 99
	\$179,842 31

GOODS SOLD DURING THE YEAR ENDING JUNE 30, 1889.

812,200 22x36 grain bags, at 7½ cents	\$58,884 50
1,034,750 22x36 grain bags, at 7½ cents	77,606 25
1,008,058 22x36 grain bags, at 7½ cents	93,702 00
364,100 22x36 grain bags, at 8 cents	21,128 00
3,500 imperfect grain bags, at 5 cents	175 00
4,000 4-pound wool bags, at 30 cents	1,200 00
1,600 4-pound wool bags, at 32 cents	512 00
50 ¾-pound wool bags, at 30 cents	15 00
1,050 odd and damaged bags	27 77
52,011 yards 40-inch burlap, at 5½ cents	2,756 59
17 yards 45-inch burlap	1 00
970 yards 45-inch burlap, at 5 cents	48 50
208,162 yards 45-inch burlap, at 6 cents	12,489 72
6,360 yards 45-inch burlap, at 6½ cents	429 31
20 yards 45-inch burlap, at 7 cents	1 40
44 yards 45-inch burlap (sewn together), at 7½ cents	3 30
1 bean cloth, 35x35 feet	9 75
1 bean cloth, 40x40 feet	11 75
1 bean cloth, 48x50 feet	17 50
1 bean cloth, 15x15 feet	1 25
1 bean cloth, 15x18 feet	1 50
4,008 pounds 3-ply twine, at 8 cents	327 84
50,270 pounds 5-ply twine, at 7 cents	3,518 90
50 yards ore cloth (damaged old stock), at 5 cents	2 50
3,429 pounds jute rope, at 2½ cents	85 73
33,082 pounds jute rope, at 1½ cents	372 17
420 pounds loom waste, at ½ of a cent	2 10
9,664 pounds loom waste, at ½ of a cent	84 57
3,982 pounds loom waste, at 1½ cents	44 79
11,740 pounds card waste, at ½ of a cent	73 38
Issued and charged to departments of the prison:	
100 pounds 5-ply twine, at 6 cents	6 00
110 yards 45-inch burlap, at 6 cents	6 60
209 yards coffee cloth, at 6 cents	12 54
Drayage charged in bills	11 25
	\$273,570 46
Less shortage in remittance for 1,500 grain bags in July, 1888	\$0 05
Rebate for freight on 120,000 bags received by purchaser on board their own vessels—240 bales, at 25 cents per bale	60 00
	60 05

Net amount of sales

\$273,510 41

PROFIT AND LOSS ACCOUNT.

Net amount of sales of jute goods during the year ending June 30, 1889	\$273,510 41
Value of goods on hand June 30, 1889, at cost price	1,966 64
educt:	
Net operating expenses for the year	\$179,842 31
Value of goods on hand July 1, 1888	14,707 88
	194,550 19
Net profit on goods sold during the year	\$80,962 86
41½ per cent on cost price.	

RECLAIMING THE WASTE LANDS.

The work of improving the State Prison tract has been continued during the past year, and quite a large area of land has been converted into vegetable gardens. The hillsides in the "valley," from which for years the soil had been stripped for brick making, and which formed such an unsightly feature of the prison grounds, being cut up by small gulches and ravines in all directions, have been leveled during the year as long as the condition of the soil would permit the use of a plow, and in the course of another year may be put into such shape as to make their cultivation practicable.

The construction of a levee, thirty feet wide on top, across the tract of tide land west of the prison has been commenced, and is rapidly approaching completion, and when finished will be the means of reclaiming about twenty-five acres of land now covered by tide water.

WELL WATER.

Irrigation being necessary for the proper cultivation of the new ground made during the year, and we being dependent for our water supply entirely upon the Marin County Water Company, several wells in the "valley" were cleaned out, and windmills and tanks erected over them, and these furnish now a portion of the water required. The sinking of a very large well is also under way near the northwest corner of the prison wall, and this shows indications of furnishing a large supply of water when finished. While sinking this well a body of rock was struck, which is of considerable value, as it presents the appearance of a first class building stone. Four hundred blocks have been cut and dressed with a view to use as quoins in the front building, for which an appropriation was made by the last Legislature.

PURCHASE OF LANDS.

An appropriation was also made to purchase adjacent lands at San Quentin for the use of the State Prison, and improvements on State lands owned by various parties, and the following purchases have been made accordingly:

First—Ninety-five acres of tide lands from assignees of Wm. T. Coleman, for \$2,500; the deed also including whatever interest they may have in about twenty more acres adjoining.

Second—Houses on State lands formerly owned by Mrs. Jones, Mr. Saultry, D. Sutherland, and W. O'Grady, the price paid for all of them aggregating \$1,000.

The purchase of land, to straighten boundary line and for right of way to change county road, has not been effected yet, owing to the land in question being in litigation before the United States Supreme Court, and pending a decision, a perfect title cannot be given by the present holder of the land.

The two acres of tide land and the houses owned by Mrs. Edwards et al., for the purchase of which the sum of \$2,000 was appropriated, are still in possession of the owners, who refuse to sell for this sum, it being \$1,500 less than the price at which they offered to sell. The houses owned by John Mann and Henry Schlosser have not yet become the property of the State, because the owners are not satisfied with the sums appropriated by the Legislature for the purchase of the property.

THE PRISON RECORDS.

I find the books in the Turnkey's Department have been very badly kept, the volumes being in a dilapidated condition, needing immediate care, and I have had a clerical force assigned to the task of rewriting the books in compact form; I have also made arrangements to print a reference book, which will do away with the constant use and consequent wear and tear of the bulky volumes. As the work progresses, the necessity for the revision and preservation of the records is made more strikingly apparent.

Accompanying will be found reports from the Turnkey, the Physician, the Chaplains, and the Clerks, which give detailed information as to the condition of the several departments.

Respectfully submitted.

JOHN McCOMB, Warden.

CLERK'S REPORT.

CLERK'S OFFICE, CALIFORNIA STATE PRISON, }
SAN QUENTIN, CAL., August 28, 1889. }

Hon. JOHN McCOMB, Warden State Prison, San Quentin, California:

DEAR SIR: I have the honor to submit the following report of the financial transactions of this prison during the fortieth fiscal year, ending June 30, 1889. Table No. 1 exhibits the cash received from all sources during the year; Table No. 2, the cash disbursements for the same period; Table No. 3, abstract of the expenses for same period; Table No. 4, cost of maintaining prisoners for same period; Table No. 5, earnings for the fortieth fiscal year; Table No. 6, assets and liabilities.

Very respectfully,

J. V. ELLIS, Clerk.

TABLE No. 1.

Cash Receipts of the State Prison at San Quentin, during the Fortieth Fiscal Year, ending June 30, 1889.

DATE.	General Appropriation.	State Prison Fund.	Jute Fund.	Jute Mill and Building Fund.	Appropriation for Purchase of Land.
1888—July	*\$22,764 04	\$1,372 25	\$75 00

TURNKEY'S REPORT.

SAN QUENTIN, August 1, 1889.

Gen. JOHN McCOMB, Warden of California State Prison, San Quentin:

SIR: I herewith submit my tabulated reports of the Turnkey's Department for the fiscal year ending June 30, 1889.

Very respectfully,

B. DOUGHERTY, Turnkey.

PHYSICIAN'S REPORT.

To Gen. JOHN MCCOMB, Warden California State Prison at San Quentin:

SIR: In making my report for the fiscal year ending June 30, 1889, I desire to call your attention to the unusual number of deaths from consumption—seventeen, half the whole number of deaths, from this fell scourge. Nearly all came here with the disease perfectly developed and easily distinguishable. I now have five men in the hospital, who will eventually die with this awful disease, whose lives could have been prolonged had they been sent to a more salubrious climate.

Therefore, I am in hearty accord with Dr. Ruggles, of the State Board of Health, when he proposes to have the Board issue a circular addressed to all Judges, asking them to carefully examine (or have the County Physician do so) all prisoners, and have them send those who have the slightest lung trouble to Folsom, for this reason: that the increased dryness of the air at that place is greatly to the advantage of all who suffer from lung troubles, more particularly consumption and asthma.

It is well known that the bay climate is the worst possible for those troubles; therefore, for the sake of extending the life of those suffering from those troubles and for the better preservation of the health of the convict, it would be only humane to send all who show the slightest disease of the lungs to Folsom.

Another thing is the great number of Spaniards who develop this disease. After being confined here a few weeks, they commence coughing, and rapidly go down, are taken to the hospital, and eventually die in spite of all medication.

The jute mill seems to be the worst place for them, and I am very careful to take them out of the mill when my attention is first called to them and put them in the road gang, where they sometimes pick up, but in nearly every case the relief is but temporary, and they soon sicken and die.

Taking data from all these facts, I would most strongly urge you to call attention to these facts, and urge upon the Board of Directors to cooperate with the Board of Health and call upon the different Judges to send all who are so afflicted to Folsom.

The health of the prisoners has been good during the past year; but deaths that have occurred have been for the most part Spaniards and old men who have been in prison for a long time.

The sanitary conditions are as good as one could expect from old buildings which are not of modern date or design, and have many defects, some of which have been remodeled, and others will always remain as long as the buildings stand.

I would call attention to the necessity of having a cesspool constructed, to empty buckets in the morning; also the advisability of having around the water-closets paved with bituminous rock or asphalt, instead of as now with bricks, for the reason that there is always more or less slop coming from a number of men emptying buckets, and this the bricks absorb, making during the heat of the warm days an unpleasant odor, while a

bituminous rock pavement could be easily kept clean, and no smell would arise.

The old bunks have been torn out and replaced with new ones in nearly all cells and rooms, making it much easier to clean.

The new bathing tank is a marked success, as I predicted it would be in my last report, it being in the upper yard where the men have access to it at all times. They have no excuse for not bathing, and I don't think there are but very few men but what take advantage of the privilege, and take a bath at least once a week. And as cleanliness is next to Godliness, this in a great measure prevents sickness.

As it comes within my province to inspect the food, and see that what the prisoners get is wholesome and fit to eat, I will say the food is good and wholesome—much better than one half the men would get were they free.

The mess consists of beans, mush, bread of fine quality, and plenty of good coffee, for breakfast. Boiled beef, stew, potatoes, corned beef once a week, and fish once a week, for dinner; and for supper beef stew with vegetables, beans (two kinds—red and white), and tea instead of coffee. This, together with plenty of bread of the best quality at all meals (Chinamen have rice at all meals), constitutes the bill of fare, which I think plenty good enough for men who are sent here for punishment, not for a picnic.

The death rate continues to be somewhat large. This is owing to the large per cent of Spaniards, Indians, and Chinamen who, from the very nature of things, are prone to develop consumption, scrofula, and other kindred diseases.

The average number of inmates was one thousand three hundred and thirty-eight, with a total of thirty-four deaths, making a death rate of $2\frac{1}{2}$ per cent. Of this number, two died by suicide, and one was murdered. Taking this from the total will leave but $2\frac{1}{8}$ per cent.

I am in hopes the death rate will be much smaller the present year. All indications point that way.

I find, on referring to the books, that there has been five thousand and thirty-nine calls on the doctor for treatment, of which two thousand two hundred and forty-four were excused from labor—some for a length of time, while the most were for trivial ailments and only had an excuse for the day.

On dividing these calls into quarters, they show but very little difference, showing that there has been no epidemic of any kind:

First quarter—Calls, one thousand four hundred and one; excused, six hundred and fifteen.

Second quarter—Calls, one thousand and ninety-three; excused, four hundred and ninety-eight.

Third quarter—Calls, one thousand two hundred and sixty-three; excused, five hundred and thirty-six.

Fourth quarter—Calls, one thousand two hundred and seventy-two; excused, five hundred and ninety-three.

Making a total (as I have already said) of five thousand and thirty-nine calls and two thousand two hundred and forty-four excused.

The following table shows the number of deaths, from what they died, the month in which they died, and the number in hospital during the month:

July, 1888.—Number in hospital, 10. 11302—Samuel Stevens, consumption; 9978—Ah Wan, opium habit; 11715—Louis Garcia, consumption.

August, 1888.—Number in hospital, 8. 11819—Tomas, Indian, consumption; 12971—Wm. Clements, consumption.

September, 1888.—Number in hospital, 12. No deaths.

October, 1888.—Number in hospital, 12. 12125—Santiago Sales, scrofula; 11458—William Scollard, pneumonia; 13174—Shortrom Yokosi, consumption.

November, 1888.—Number in hospital, 17. 13011—George Daily, suicided by jumping from balcony of sash and door factory; 5800—Tesdero Morena, cancer of throat; 12909—John O'Brien, consumption; 10111—Ah You, consumption; 11383—Indian Johnnuy, consumption; 12916—Isaac Farren, inflammation of bowels; 12570—Billy Ketchum, scrofula.

December, 1888.—Number in hospital, 12. 12808—Ysedro Menchago, general debility; 12484—Charles Larkin, consumption; 12181—Annie Thompson, epilepsy; 12275—Daniel McCarthy, consumption.

January, 1889.—Number in hospital, 11. 12882—Fred. Gillett, general debility; 12818—Ybarro Branos, consumption; 13042—Ah Hing, heart disease; 12427—Ah Sam, consumption.

February, 1889.—Number in hospital, 11. 13128—J. G. Crawford, suicided by hanging; 12382—Henry Lewis, murdered; 12807—John Mahoney, consumption.

March, 1889.—Number in hospital, 13. 10490—José Morfica, consumption; 13338—Juan Chino, cirrhosis of liver.

April, 1889.—Number in hospital, 13. 12650—John Doyle, inflammation of bowels.

May, 1889.—Number in hospital, 15. 12481—George West, syphilis; 12726—Juan Lopez, consumption.

June, 1889.—Number in hospital, 15. 13106—James Smith, heart disease; 9156—Jesus Ballos, consumption; 13552—Thornton McGee, consumption.

RECAPITULATION.

Died of consumption	17	Died of opium habit	1
Died of heart disease	2	Died of cancer of throat	1
Died of syphilis	1	Died of pneumonia	1
Died of scrofula	2	Died of general debility	2
Committed suicide	2	Died of epilepsy	1
Died of inflammation of bowels	2		
Died of cirrhosis of liver	1	Total	34
Murdered	1		

In conclusion, I desire to express my gratitude to you, sir, for uniform courtesy and prompt attention to all measures I suggested for the sanitary good of the prison, and to other officers for courtesy and kindly good feeling.

Very respectfully,

F. C. DURANT, M.D.

CHAPLAIN'S REPORT.

Hon. JOHN MCCOMB, Warden :

DEAR SIR: I herewith respectfully submit my report of the department under my charge for the year ending June 30, 1889. As I have, at the beginning of each month, made a report to you of the transactions of the previous month, this document will be little more than a summary of those twelve reports.

LIBRARY.

Again I have the pleasure to report that the library has been as popular and well patronized an institution as in any previous year. The prisoners appreciate, to the full, this means of mental entertainment, and are eager to avail themselves of the privilege to draw books from the shelves of the library. I must again express my regret that the Legislature does not place at the disposal of the Warden, monthly, a small sum, to add to the library a few, at least, of the current popular issues of the day. The additions of the year have been limited to the gift of a few second-hand volumes from the Mechanics' Library of San Francisco, and the binding of the monthly magazines, for which we are again indebted, mainly, to the generous liberality of Mr. George W. Gibbs, a merchant of San Francisco. The writer and the prisoners are grateful to him for his kind remembrance of those who are in "the house of bondage." I append a particular statement of the library during the year:

Books on the shelves July 1, 1888, five thousand two hundred and six; added during the year, eighty; condemned as too dilapidated for further use, ninety; missing, two hundred and four; leaving four thousand nine hundred and ninety-two as the present number. Of these, three thousand five hundred and fifty belong to the public, and one thousand three hundred and eighty-three to the Catholic side of the library.

The issues for the year were twelve thousand two hundred and twenty-seven, being a monthly average of one thousand and nineteen. Of these issues ten thousand nine hundred and forty-one were from the public, or general side, and one thousand two hundred and eighty-six from the Catholic. Besides these books of the library, we have still an assortment of about one thousand four hundred bibles, testaments, school, and prayer and hymn books.

DONATIONS.

These have been as liberal as in most of the former years, aggregating as follows:

Newspapers—miscellaneous	2,540
Newspapers—religious	1,170
Newspapers—foreign	460
Newspapers—scientific	80
Newspapers—illustrated	130
Magazines and pamphlets	600
Books	90
Almanacs and calendars	1,700

The donors, to whom suitable acknowledgment was made at the time, are: The Rev. James Woodworth, Miss Stebbins, Mr. James Linforth, heirs of General Allen, Mr. A. C. Bradford, Cosmos Club, Mr. George W. Gibbs, Mechanics' Library, San Francisco; Miss C. Curtiss, Mrs. Dr. M. A. McMath, San José; Mrs. Kemble, Mrs. Dr. McClure, Oakland; Mrs. P. Hendry, E. R. Highton, Alameda; R. M. Sherman, Miss Chase, Santa Clara; Mrs. Brown, Dr. Hinman, unknown donor; Mrs. Lissak, Dr. Hasey, Pennsylvania; Mrs. Tharp, San Quentin. The Chaplain and his family have also added somewhat to the pile of donations.

BINDERY.

Much work has been done in this department, but it has not been worked up to its capacity for want of necessary material. It is still in charge of the same prisoners, who have had one assistant a part of the time. The work performed has been highly creditable to the binders. It foots up as follows:

Books bound and rebound	199
Books repaired	461
Copybooks made	239
Tablets for the offices	136

EMPLOYÉS.

There are two assistants in the library, one having special charge of the Catholic side, one bookbinder, and an assistant—four in all, who also do the janitor's work. All, of course, are prisoners.

I have attended fifteen funerals during the year—a small number when compared with previous years, and certainly a small per cent of the more than one thousand three hundred inmates of the prison.

RELIGIOUS SERVICES.

These have been regularly held, as heretofore, in the prison chapel at 9:15 A. M. on each Sunday. On the second and fourth Sunday of each month, the services of the Roman Catholic Church are held by the Rev. H. Lagan, of San Rafael, and his assistants. The other Sundays are occupied either by myself or by other ministers, who have, from time to time, kindly accepted my invitation to preach to the prisoners. The Rev. James Woodworth, of San Francisco, Secretary of the Prison Commission, has, as usual, officiated on the third Sunday of each month. The attendance during the year has been larger than on previous years, the chapel being well filled each Sunday, and sometimes crowded. I have administered the holy communion four times to the little band of professing Christians. On the twenty-third of June, Archbishop Riordan, of San Francisco, visited the prison and administered the holy rite of confirmation to a large number of recipients. His visit, official acts, and earnest address to the prisoners, made a deep and, I trust, a lasting impression upon the men. I suppose that the Assistant Chaplain has given you a full account of this interesting service.

It is my intention, at an early day, to have a confirmation held by the bishops of the Protestant Episcopal Church, and believe that a large class will be ready and anxious to receive the rite of "laying on of hands."

I believe and think a careful observation of nearly eight years enables me to speak with some confidence that the effect of all these religious services

is not only good upon the attending prisoners personally, but also promotive of good discipline in the prison generally. Many of the prisoners are sincerely desirous of a thorough reformation, and in their endeavors to accomplish this object, these religious services exert an influence for good, second to none in a penological institution.

Services are still held in the women's department, on the first and third Sundays of each month. The attendance is small, but the services are warmly greeted by the few who do attend.

The Sisters of Mercy continue their monthly visits to the prison. I always give them a hearty greeting, and my wishes for success in their self-denying efforts to do good, not only to those of their own sex, but also to the men in the hospital, and elsewhere in the prison. Would that some other "holy women" would imitate their Christian example.

Respectfully submitted.

WM. H. HILL,
Chaplain.

SAN QUENTIN, July 1, 1889.

CHAPLAIN'S REPORT.

Hon. JOHN MCCOMB, Warden of San Quentin :

DEAR SIR: In April of last year the Board of Prison Directors, in that spirit of fair dealing that characterizes all high-minded citizens, gave the unfortunate Catholic prisoners equal rights with their Protestant associates. At the request of His Grace, Most Reverend Archbishop Riordan, and at your own strong recommendation, prompted by your sense of right and justice, the Directors, by a unanimous vote, appointed a Catholic Chaplain to minister to Catholic prisoners. Since then my assistants and myself have worked, with a certain amount of success, for the spiritual interests of those professing our faith, and for the material interests of the State, which must be affected for good or for evil by the moral character of its citizens. It affords me great pleasure to state that every effort was encouraged by those in authority. Indeed, I gratefully acknowledge the uniform kindness and constant good will manifested by the Warden and every subordinate officer. Many of the grateful prisoners have many times expressed similar feelings in more expressive language for this happy state of affairs. There are many generous and appreciative souls behind bolts and bars, upon whom kindness is never wasted. Every little shadow of attention or consideration brings a ray of light into their ruined lives, fills them with inexpressible gratitude, and makes the hardened man a child in confidence and obedience.

Before my connection with the prison, I had very different ideas of the unfortunates, branded with the stigma of social ostracism, made to wear a garb of shame, and condemned to dwell in living tombs. To my eye, every convict was a criminal to be shunned or watched. I am now satisfied, as I am of my own existence, that there are innocent, yes, saintly men in San Quentin. I believe that hearts as good, as loyal, and as true, beat under coarse, striped flannel, as under the broadcloth, the velvet, and purple of a glittering world; hearts, that in the wild moment of passion, or in the evil hour of insane drunkenness, have yielded to excesses and stooped to crimes which they would give a thousand lives to blot away. There are brutal natures, vicious creatures, and human monsters, who need iron tanks and armed keepers, and who are not at home except in prison. It is not hard to distinguish these different classes of men in the prison yard. The religious life of the prisoner is the greatest comfort to the first and better element, and makes them, in a manner, resigned, if not satisfied, with their sad fate.

It was for them a day of great joy and consolation when the chief pastor of their souls paid his first official visit to their dismal home, consoled them in their sorrow, encouraged them by loving and fatherly advice, broke to them the bread of life, and placed on their brows the standard of Christ, which shall be for them in the future the standard of victory. Over two hundred convicts received holy communion, and over two hundred more the sacrament of confirmation at his hands. A considerable amount of time and labor had been expended for this happy result. Four priests labored faithfully for the greater part of the preceding week, in hearing the

confessions and instructing the prisoners. Non-Catholics may consider it as they will, but the power that takes the man of passion and makes him docile as a child; brings the hoary-headed old sinners, and the young man full of passion and resistance, on his humble knees, and, in the language of sobs and tears, extracts from him the history of his dark and chequered life; brings from his lips, yes, from his heart, expressions of sorrow and regret for the evil past, and promises reform for the future—this is a power for good that few can appreciate, who have not seen or experienced its magnitude. This power was at large during the mission at San Quentin, and this happy fact we owe to you. In the name, therefore, of the Archbishop of the diocese, in the name of the priests of the State, and particularly in the name of the prisoners, I sincerely thank you for the true spirit of religious liberty and equality that marks your administration.

We visit the prison frequently in the discharge of our duties. On every second and fourth Sundays of the month, at 9:15 A. M., mass is celebrated and a sermon preached. On the same day there is catechetical instructions from 1 to 2 P. M. The large Chapel Hall is always packed with a respectful and, I believe, an average religious congregation. Their conduct is all that could be desired in a fashionable city congregation.

Good results must necessarily follow from the Sunday services. The chapel is not suited for divine service. There is nothing in it to create or foster devotion and piety. In the first place, there are not enough benches. The walls are rough brick; the roof ugly and open. Almost alongside the platform on which the priest celebrates mass and from which the minister preaches, there is an article of furniture that should be located elsewhere. The chapel should, I believe, be put in proper order for the sacred services of religion. No doubt but as soon as the many and vast improvements inaugurated during your administration are fairly under way, you will direct your attention to the miserable chapel, and make it what it should be. The chapel serves also for a library. This department is under the jurisdiction of Rev. Mr. Hill and two assistants. One is a Catholic, and is supposed to be particularly interested in the Catholic section of the library. The library is tolerably fair. There is a great deal of miscellaneous and light reading. The reverend Chaplain has already made an exhaustive report, every word of which I indorse, and particularly those relating to the binding. We attended many sick calls during the year, and in relation to them I wish to express my appreciation of the Christian spirit of Mr. Hill, who always telegraphs or telephones us as soon as he sees danger of death to a poor Catholic patient.

There is no compulsion to attend divine service, and of this I approve. I highly and heartily approve of your action in throwing open every prison door on Sunday morning, giving every prisoner the freedom of the yard for the day. I have been often delighted to see the young men playing and jumping and indulging in all kinds of boyish amusements, for then I knew that, for the passing hour at least, they forgot their sorrows and looked not on the towering walls, the gloomy cell, and the frowning guns on the posts.

The female portion of the prison we attend once per month. We say mass or give an instruction. We visit them as occasion requires during the month. They are always most respectful and docile. All their surroundings are clean and neat; their rooms, particularly, are models of taste and culture. Wishing you a long term as Warden of San Quentin,

Yours, very respectfully,

H. LAGAN, Chaplain.

REPORT OF THE WARDEN

OF THE

State Prison at Folsom, California.

WARDEN'S REPORT.

To the honorable State Board of Prison Directors:

GENTLEMEN: I have the honor to submit herewith my annual report for the fortieth fiscal year, also the reports of the Deputy Warden, Physician, and Commissary, showing in detail the operations of the Folsom State Prison.

The report of the Clerk, also submitted, sets forth fully the financial transactions of the prison for the year.

The appropriation made by the Legislature for the thirty-ninth and fortieth fiscal years was \$250,000. We used for the support of the prison during the thirty-ninth fiscal year, \$113,573 72; during the fortieth fiscal year, \$116,039 46, making a total of \$229,613 18; leaving a balance of \$20,386 82 of the appropriation unexpended after paying all liabilities for the year, which will, by law, revert to the General Fund in the State Treasury. By reference to Table No. 8, of the Clerk's report, it will be seen that we have in the Folsom State Prison Fund, \$11,359 66; due from sundry debtors, \$5,024 56; cash on hand, \$1,532 11; total available cash assets, after paying all liabilities for the fortieth fiscal year, \$17,916 33. This amount will be available for use during the ensuing two years, which, added to the appropriation made by the last Legislature, will be ample to meet all requirements, notwithstanding the prospect of a large increase of the number of convicts on hand, and the decrease in the appropriation of \$30,000.

We have done but little quarrying of stone for sale, owing to the employment of all our laboring force on the dam and canal. The demand for building-stone, curbing, crosswalk, and trimmings for buildings is steadily on the increase, at advanced prices over last year, with a prospect of a much greater increase in the future. We could readily find sale for all the granite we can quarry and dress. I have faith in the future operations of the quarry when we are in a position to utilize our labor in that direction.

Table No. 3, of the Clerk's report, shows the maintaining cost of the prison for the year in detail, the total being \$97,445 09. The average number of convicts on hand for the year being 488.3, makes the per capita per diem cost fifty-four cents and six mills. This is a larger pro rata than it should be, and is due to several causes. The average number of prisoners was reduced from 539 the previous year, to 488.3 by the transfer of one hundred and fifty prisoners to San Quentin in the latter part of the previous year. The working of all our available force outside the limits of the prison, scattered along the bank and bed of the American River for some distance, necessitated the strengthening of the guard line to prevent escapes; hence it will be seen that the salary account of \$39,726 47, or 45 per cent of the total maintaining cost, is largely out of proportion to the number of convicts in the prison, and that of necessity increased the per capita per diem cost. As stated in a former report, it requires a certain number of officers to properly transact the business of the prison, and that

force would not be increased if there were one thousand five hundred convicts instead of five hundred. It also takes a certain number of guards to form a secure line in the absence of a wall, and when the line is formed it would be as easy to securely hold eight hundred as four hundred convicts, at least the increase of the guard force would be but a small percentage of the increase of prisoners. The salary payroll should not exceed 30 per cent of the total maintaining cost, and would not, except in the contingency referred to. Another item of increased cost is in the character of work we are now engaged in. The quarrying of stone, and the handling of loaded cars and heavy machinery, are destructive of clothing and shoes to a much greater extent than any other kind of work, as well as requiring more substantial food than the lighter employments of the factory. Many of these causes of increased cost will be eliminated during the ensuing year. The number of convicts will average at least one hundred monthly, which will make but little increase in the total cost. I hope to reduce the per capita per diem down to the average of the best managed prisons in the United States.

We suffered some loss by fire during the year. Two wooden buildings used as a carpenter shop, tin shop, plumber shop, paint shop, photographic gallery, and sawmill, were burned July 1, 1888. The day was exceedingly hot, and from the inflammable nature of the material, they burned so quickly that we could not save any portion of the contents. Again, in October we lost our hay and cow barn and one hundred tons of hay by fire. For detailed account of our loss, see Table No. 6, of Clerk's report.

The farm has been unusually productive; we have cured, baled, and stored nearly two hundred tons of hay of prime quality, which will exceed our requirements for the ensuing year. A much larger area was planted in garden with good results. The yield of grapes was also large, and materially improved the diet of the prisoners' mess without increasing the cost. In the latter part of winter we planted out eleven acres of choice varieties of table grapes and fruit trees, to make the beginning of a future orchard and vineyard. Their growth so far has exceeded our expectations and demonstrated that the soil on the farm is peculiarly adapted to the raising of vegetables, fruit, and vines. I hope to increase the orchard and vineyard next year, so as to meet the full requirements of the prison, for both employés and prisoners. I find the latter take great interest in the raising of vegetables, fruit, and grapes, as they are, in a measure, the beneficiaries of their own labor. With plenty of water, which we will have upon the completion of our power house, this can and will be made a model farm, a credit to the State, and an example for the private citizen to follow.

The report of the Deputy Warden gives some interesting statistical information regarding the convicts. Two hundred and sixty-two convicts were received and one hundred and thirty-four were discharged, a net gain of one hundred and twenty-eight during the year; leaving five hundred and forty-nine on hand at the close, as against four hundred and twenty-one the previous year. At the close of the year our full number was on hand except those legally discharged; in other words, we had two escapes, both of whom were captured and returned to the prison. This is a flattering tribute to the efficiency of our guards, when it is remembered that we are working our entire force outside the prison wall, almost in the wilderness.

The Physician's report is especially called to your attention. But six deaths occurred during the year, an average of 1.22 per cent of our population. Of this number one was killed by the guards while attempting to run through the line, one was killed by the falling of a derrick, and one died from the effects of injuries received in jumping from the train while

being conveyed to the prison, leaving but three natural deaths, neither of which was due to any local or climatic causes. Better proof of the splendid sanitary condition of the prison, the healthfulness of the locality, and the care and attention given the sick and afflicted could not be adduced. If anything further was needed it could be supplied in the limited cost of the Hospital Department, as shown in Table No. 3, Clerk's report.

The discipline amongst the prisoners has been uniformly good. They have worked well, and complied cheerfully with the rules adopted for their guidance. But few punishments have been necessary, and only for trivial offenses. I commend them highly for good conduct and faithful labor.

THE DAM AND CANAL.

The completion of this undertaking is no longer a theory; it is an assured and almost an accomplished fact. When we closed down work on the dam in November last, on account of the high water, the many thousand cubic yards of masonry that were buried in the foundation, left but little to be seen as an evidence of our summer's work, and it was with some hesitation that we asked the Legislature for an appropriation of \$112,500 to build the State power house, including a large pump to raise water for irrigation and domestic uses, an electric light and power plant, etc. The employment of convict labor upon large public works of this kind seemed to strike a popular chord, while the advantages and economy of water power over steam power were so apparent that the Legislature, by a unanimous vote of both houses, granted the appropriation asked for. Since the adjournment of the Legislature work has progressed vigorously and favorably, and, at the date of this report, September first, it is demonstrated that the dam will be completed across the river early in November. The wingdam and headgates will take some four months longer. When that is accomplished, the entire force will be placed on the State power house and canal, which will be completed, and the resultant power be in use by the State before our next annual report is submitted. No one can appreciate the magnitude of the work except by personal inspection. It has been examined by eminent engineers and pronounced by them to be the best and largest work of the kind in America. In fact, its massiveness and unusual stability were sharply criticised, until the terrible disaster in Conemaugh Valley, Pennsylvania, brought the American people to a realizing sense of the destruction that could be caused by such structures when proper attention was not given to the power of so large a body of water held in check by artificial means. There will be no repetition of that disaster in this case unless all engineering skill is at fault. The Folsom Water Power Company has spared no expense in material, and as the State is out nothing but the convict labor, it has been deemed best to make the work a monument of industry for all time, and a lasting credit to his Excellency Governor Waterman, and to the honorable Board of Prison Directors, who have given it their official and personal support from its inception to the present time. As the advantages that will accrue to the State from the completion of this work, and the application of the resultant power, were fully set forth in my last report, it is unnecessary to recapitulate here. The Legislature will have to determine at its next session what industries it will be best for the State to engage in.

In conclusion, I desire to express my sincere thanks to the Governor of the State, and all the members of your honorable Board, for the hearty support given the management of the prison during the past year. It has materially lessened the duties imposed on me personally, and greatly

facilitated the maintenance of good order and discipline, rendering the administration of prison affairs a pleasure instead of a trial. The officers and guards of the prison are also entitled to the thanks of the honorable Board and myself. They have been unremitting in their efforts to advance the best interests of the prison and the State; have faithfully and intelligently carried out all instructions given them, and manifested an earnest desire to promote harmony and good feeling toward each other.

Respectfully submitted.

CHARLES AULL,
Warden Folsom State Prison.

CLERK'S REPORT.

STATE PRISON AT FOLSOM, CALIFORNIA, }
September 1, 1889. }

To the honorable State Board of Prison Directors:

GENTLEMEN: I herewith submit for your consideration a full statement of the financial transactions of this prison for the fortieth fiscal year, ending June 30, 1889.

Very respectfully,

W. W. CUNNINGHAM, Clerk.

TABLE No. 3.

Exhibit of Cost of Maintaining Prisoners at State Prison at Folsom for the Fortieth Fiscal Year, ending June 30, 1889.

ACCOUNTS.	Inventory, July 1, 1888.	Issues During Year.	Total.	Inventory, July 1, 1889.	Balance.

DEPUTY WARDEN'S REPORT.

STATE PRISON AT FOLSOM, CALIFORNIA, }
July 4, 1889.

Hon. CHARLES AULL, *Warden State Prison at Folsom:*

DEAR SIR: I herewith beg to submit my report, in tabular form, for the fiscal year ending June 30, 1889.

Respectfully,

W. H. ROBINSON,
Deputy Warden.

TABLE No. 1.

Prison Account from 1881 to June 30, 1889.

	1881.	1882.	1883.	1884.	1885.	1886.	1887.	1888.	1889.	Total.

REPORT OF PHYSICIAN.

STATE PRISON AT FOLSOM, June 30, 1889.

CHAS. AULL, *Warden*:

SIR: I have the honor to hand you my report of the Medical Department of this prison for the fiscal year ending June 30, 1889.

Since my last report the health of the prisoners has been unusually good; I have had only six deaths to record, three of which died from violence—one received a gunshot wound in attempting to escape, from which he died; one received injuries in jumping from a train, from which he never recovered; and one other was killed by the fall of a derrick while at work on the canal—two died of phthisis pulmonalis, and one from septecemia, making our death rate 1.22 per cent of the prisoners confined.

The diet and clothing of the prisoners have been ample and of good quality; the sanitary rules rigidly enforced. These facts, including a good climate, have been the cause of our low death rate. Formerly Folsom was considered a very unhealthy locality; there were a number of large reservoirs located in its vicinity; now that hydraulic mining has been abandoned they have been discontinued, and the result has been to make this one of the healthiest places in the State, as our death rate will show.

A great source of trouble in the management of prisoners heretofore has been the opium habit; but I am able to state that for the past year I have been troubled but very little. There has been a number come here confirmed users of the drug; in a short time after their arrival they were cured, and now are as good and faithful laborers as we have.

There are a number of minor improvements that I could suggest, but they can be postponed until we have more time.

I thank you and your efficient corps of officers for the many acts of kindness shown.

I am, very respectfully, your obedient servant,

THOS. B. EAGLE,
Physician.

E. A. REDDY.....	Captain of the Guard.
Dr. F. C. DURANT	Physician.
JOHN McCOMB, Jr.....	Warden's Secretary.

REPORT.

NOVEMBER 15, 1890.

To his Excellency R. W. WATERMAN, Governor of California:

In compliance with law the State Board of Prison Directors submit to you their annual report for the fiscal year ending June 30, 1890.

Reports have been prepared by the principal officers of the institutions under the superintendence of the Board, showing the management of these institutions for the last year, and they are appended to this report for fuller information. They also show what has been done under the various appropriations made at the last session of the Legislature.

In addition to the matter contained in the reports of the subordinate officers, there are several matters to which the Board desires specially to draw your attention.

1. It will be necessary for the Legislature to determine to what uses the power derived from the dam and canal at Folsom shall be put, and to make the necessary appropriations for the erection and equipment of such manufactories as in their judgment may best be carried on. We will not repeat the history of the building of the dam and canal, nor speak of the advantages that will be derived from the power at the command of the State. These matters are familiar to you. But inasmuch as the quantity of power belonging to the State will soon be capable of utilization, the question as to the manufacturing industries that shall be carried on at Folsom becomes an important one, and in its solution will arise two considerations—profit to the State, and non-injury to free labor. The Board have concluded it to be unnecessary to formulate plans for the building of manufactories, preferring to submit the facts to the Legislature.

2. It will be necessary to make an appropriation to complete the Preston School of Industry at Ione. The last Legislature made an appropriation of \$160,000 for the purchase of grounds, water power, and erection of buildings, maintenance, etc.

This sum was named on the supposition that the school would be erected at Folsom, where it could be built with convict labor, and where the material for construction would be free. When it was provided that the school should be located in Amador County, where it became necessary to purchase land, water, and building material, the amount of the appropriation was not increased. It would be a waste of words to speak of the necessity of the speedy completion of such an institution. California has been derelict in the duty she owed to the young offender, whose life was tending in the direction of vice. In both of our State Prisons are many boys who, instead of being subject to that reformatory influence exercised by an industrial school, are necessarily, under the congregate system followed in our prisons, learning from older and more experienced criminals the love and the art of crime.

3. The care of the criminal insane is a subject that deserves careful consideration. In reports in the past we have called attention to this matter, and finally the Legislature made an appropriation for this

purpose, and provided for the erection of a building at San Quentin. The Board called to their assistance Drs. Wilkinson and Hatch, Superintendents of State Insane Asylums, and they recommended that a building be erected outside of the prison inclosure, claiming that the health and mental condition of the inmates would be improved by placing such prisoners as became insane in prison in a structure removed some distance from the prison itself, and erected with a view to its use and benefit as an asylum for the infirm in mind, rather than as a prison, where security should be the main object. The adoption of these suggestions would call for an expenditure of more money than was available for the purpose, and hence the matter has remained *in statu quo*. Plans, however, have been prepared for utilizing a portion of the prison buildings for this purpose, but no action has been taken on them.

In this connection we deem it our duty to urge upon you, and through you the Legislature, to make suitable provision for the criminal insane, those who may become insane in prison, and those who may commit crime through insane impulses, and while they are legally guiltless, are unsafe to be at large, and who, if placed in an insane asylum would exercise a deleterious influence over the other inmates. Such an institution is in operation at Auburn, New York, and Illinois is building one at the State Prison at Chester.

For the purpose of showing the necessity of properly caring for the criminal insane, we subjoin the following extract from a report of Carlos F. McDonald, M.D., Medical Superintendent of the State Asylum for Insane Convicts, at New York:

From a somewhat extensive observation of several years, respectively, of the criminal and non-criminal insane, I am led to believe that the element of crime, when interwoven with insanity, exerts a modifying influence upon the mental manifestations of that disease, and that to this extent, in a large porportion of cases, the criminal insane, medically speaking, may be regarded as a distinct and separate class, the analogue of which is not found among the ordinary insane. They present certain characteristic mental peculiarities which experience in observing this class enables one to recognize as the indelible stamp of crime, and although the line of demarkation may not always be apparent to the casual observer, its existence, as a rule, can be discovered and demonstrated if time and facilities for careful observation be had.

In my experience with the criminal insane, now nearly five years, I have been struck with the frequency of cases in which there was an absence of expressed delusions, although the manner and conduct of the individual were clearly indicative of a delusional state. Comparing these individuals with their former selves, we find undoubted evidence of a departure from their normal mental state. They have become sullen, morose, and morbidly irritable. They rebel against the ordinary rules of discipline, and make unprovoked assaults upon those around them without apparent motive and without offering any explanation therefor. That they are suffering from impairment of bodily functions is shown by sleeplessness, loss of appetite, coated tongue, foul breath, constipation, a greasy condition of the skin, and a livid, puffy appearance of the extremities, indicating a relaxed condition of the blood vessels. They are generally coherent in conversation, do not complain of being ill, nor apply for medical treatment. They frequently continue in the performance of their allotted tasks in prison for months before the attention of those in daily contact with them is attracted to their mental disturbance. From this condition they either recover or gradually drift downward to complete dementia, with no outward exhibition of delirium or mental excitement to mark the course of their disease. The occurrence of acute, delirious mania, according to my observation, is exceptional among the criminal insane, melancholia and dementia, with an occasional case of sub-acute mania, being the predominant types of insanity observed here.

A certain proportion of cases, and usually those of hardened criminals, are characterized in their mental manifestations by the most pronounced vicious tendencies, their insanity apparently expressing itself in a marked exaggeration of the depravity and vice displayed by them prior to the onset of the disease. On the mental side this is substantially the only evidence of disease which these cases present. Physically, however, their condition is marked more or less by the signs of bodily impairment above referred to. Being known to the authorities as abandoned and depraved individuals, it is not surprising that their insanity is not recognized by casual observers when it expresses itself in the manner I have indicated.

We may readily admit such cases into the category of mental disease, without in any way countenancing the dogma that insanity and crime are convertible terms. The conduct of such cases, when first admitted to the asylum, is characterized by the most striking evidences of depravity.

They are profane and obscene in language; tear and destroy clothing, bedding, and furniture; strike, steal, lie, and soil themselves and their surroundings, apparently from mere wantonness. They sleep badly, and display the resistance to the efforts of sleep-producing remedies common to lunatics. They are generally alike indifferent to coercive measures and to comfort, and it is only by constant and persistent endeavor, firmly but kindly applied by those in immediate charge of them, that they can be trained into decent habits and deportment. From the foregoing, it might naturally be inferred that the successful management of the criminal insane would involve greater difficulties than are encountered in the care of the ordinary insane; and such was my belief in the earlier period of my experience with this class, but further observation and experience have served to convince me that, with facilities especially adapted to its needs, an asylum for the criminal insane can be conducted on the same general principles, and with as good results, except in the matter of cures, as are hospitals for the ordinary insane. Visitors passing through the wards of this asylum are struck by the marked absence of noise or disturbance of any kind, this being the usual condition night and day. They not infrequently ask to be shown "the violent cases," and "those you have to keep tied up in their cells," or in "straight jackets," and when informed that no mechanical restraint of any kind is used here; that we have no cells; that there is no "disturbed" ward; and that the patients they have seen are the worst cases we have, they are apt to look incredulous and doubting, apparently being unable to realize that criminal lunatics are controlled by kindly influences, and that order and quietude prevail among what they had supposed to be the most violent class of insane. The principal difficulties encountered in the management of this institution are the prevention of escapes and a propensity of homicidal patients to obtain and conceal articles for the purpose of using them as weapons of assault. To prevent these occurrences involves the exercise of constant care and vigilance.

Cases of simulated insanity are obviously of much more frequent occurrence here than in general asylums. They, of course, are troublesome while they remain with us, but detection is not difficult, and is immediately followed by a return to prison. If it were the rule, and generally so understood in the prisons, that a convict detected in an attempt to feign insanity should forfeit the commutation of sentence allowed him for good conduct, it would, I believe, render such attempt of rare occurrence.

Insane criminals, particularly of the convict class, in their efforts to escape, frequently display a wonderful combination of shrewdness, cunning, and ingenuity. Patients of both classes, who have committed crimes against the person, are more dangerous but less inclined to escape than those who have committed crimes against property.

And Dr. G. G. Tyrrell, in an address before the State Medical Society, in 1882, said:

The only remedy presented to us to obviate this manifest and glaring wrong to our fellow beings, who, although insane, are not criminal, and to those who are both criminal and insane, is a separate and special provision for the care and custody of the criminal insane, and this in the erection by the State of a suitable asylum constituted and adapted to this special purpose, since the inmates intended for its occupancy, although insane, are still dangerous outlaws and criminals, retaining for the most part all their criminal characteristics and vicious proclivities.

4. The prison buildings at San Quentin were erected many years ago, and are built in a manner that would not at the present day be tolerated.

It would seem the part of wisdom to rebuild some of the old structures, as to put them in a proper state of repair would be as expensive as rebuilding.

In conclusion, we desire to acknowledge the many courtesies extended by you.

Respectfully submitted.

ROBERT T. DEVLIN,
J. CRAIG,
EDGAR J. DEPUÉ,
P. REDDY,
State Board of Prison Directors.

REPORT OF THE WARDEN
OF THE
STATE PRISON AT SAN QUENTIN, CALIFORNIA.

WARDEN'S REPORT.

WARDEN'S OFFICE,
SAN QUENTIN PRISON, July 31, 1890. }

To the honorable State Board of Prison Directors:

GENTLEMEN: I have the honor to submit herewith my annual report for the forty-first fiscal year, accompanied by the report of the Clerk, showing the financial transactions of the prison, in the form of tabular statements. I also submit the statistical reports of the prison population.

The financial condition of the prison at the end of the fiscal year, as shown by the Clerk's books, is as follows:

Cash in the State Prison Fund.....	\$111,754 59
Cash on hand and in bank.....	47,432 07
Due from sundry debtors.....	1,901 89
Balance of appropriation for fortieth fiscal year.....	5,881 81
	<hr/>
	\$166,970 36
Less liabilities on account of unpaid bills and salaries.....	40,054 02
	<hr/>
Leaving a net surplus of available cash resources at the end of year.....	\$126,916 32

Adding to this amount the sum appropriated for the maintenance of the prison—\$155,000—we have a total of \$291,916 32, which will meet all expenses for the current year, without taking into account any profits that may be realized from sales of jute goods, the only industry now followed.

Under your instructions, the manufacture of doors and sashes was discontinued prior to the beginning of the forty-first fiscal year; and, as all other industries have been abandoned, the sale of jute goods is the only source from which any additional revenue can be expected.

The operation of the jute mill during the past year was confined to the manufacture of grain bags, and this policy has been fully justified by the unprecedented demand made upon us by the farmers of the State. The published estimates at the beginning of the season predicted that the yield of grain would fall far short of the average, on account of the prolonged rainstorms of last winter, which interfered with the preparation of the ground for seeding, and had even drowned out some of the summer-fallowed farms. It was considered, by experts, that the stock of grain bags in the hands of dealers carried over from former years, would be more than sufficient to cover any possible demand. Farmers were not sure of the quality of their growing crops, and, feeling uncertain as to the yield, were inclined to wait until a later date than usual to procure the grain bags likely to be needed by them. The demand, therefore, did not commence until late in May; but when inquiries once began, our bags seemed to be in greater demand than in any previous season, and before the end of June our stock had become completely exhausted. Notwithstanding that circular notices were then sent to all parts of the State that we could not accept any further orders before stated future dates, the receipt of orders was checked only

to a limited extent, and by the end of the month orders were booked for all the bags that the mill could turn out up to the end of July; and, in many instances, where the farmers desiring to purchase had already made arrangements for threshing at an earlier date than we could supply the bags, we were compelled to decline their orders and return remittances.

During the past year raw jute was held at higher prices in India than it had ruled for several years prior. The cost of this raw material consumed during the year was about five eighths of a cent per pound more than it had been during the previous year, and the cost of manufacturing a bag was therefore correspondingly increased.

The grain growers of this State evidently had apprehensions in the early part of the year that the price of grain bags would advance to an unusually high figure, and therefore a request was presented to your honorable Board, by a committee representing the Order of the Patrons of Husbandry, and bearing a petition signed by farmers located in all parts of the State, to sell the grain bags manufactured at the prison at cost, or at a very small margin above the cost of manufacture. Acting upon these representations, your honorable Board decided at the beginning of the season to fix the selling price of the San Quentin grain bags at the lowest possible figure which would not entail a loss upon the State, and the price so fixed—6½ cents per bag—was adhered to from the date of your order, on the tenth of May, to the end of the season. Your action in thus assuring the farmers that the prison grain bags could be purchased at a fixed low price, had the immediate effect of checking the upward tendency of the bag market at the time, and probably prevented the formation of any contemplated combination or "ring" of dealers in bags, who could otherwise have forced farmers to pay almost any price for the bags necessary to transport to market their season's crop of grain, which it soon became apparent was very much better than had been anticipated.

The farming community was therefore greatly benefited by your action; but the realization of any large profit to the State from the sale of grain bags was put entirely out of the question, and consequently the profits derived from the sales during the past year do not at all compare with those of the preceding year, amounting to but \$17,770 98, as against \$80,926 86.

The following statement shows the operations of the jute mill for the year, in detail:

STATEMENT OF OPERATIONS OF JUTE DEPARTMENT FOR THE FISCAL YEAR ENDING JUNE 30, 1890.

Raw jute on hand July 1, 1889.....	1,408	bales
Raw jute purchased and received since.....	10,000	bales
Total.....	11,408	bales
Less raw jute on hand June 30, 1890.....	3,869	bales
Total.....	7,549	bales
Less number of bales rejected on account of damage.....	118	bales
Used in manufacturing during the year.....	7,537½	bales
7,537½ bales at 400 pounds equal.....	3,014,950	pounds
Add decrease in amount of raw jute in process of manufacture on July 1, 1889.....	89,344	pounds.
Total amount on June 30, 1890.....	29,041	pounds.
	10,303	pounds
Net amount of raw jute used during the year.....	3,026,253	pounds

GOODS MANUFACTURED.

33,736 cuts = 3,373,600 yards 45-inch burlap; 509 cuts = 50,597 yards 36-inch burlap. Total, 3,424,197 yards.
Three-ply twine, 4,220 pounds; five-ply twine, 63,323 pounds; of which amount 47,290 pounds were used in sewing bags, and 3,878 pounds in baling goods.
Number of grain bags made during the year out of burlap manufactured, 3,026,600.

SPINNING AND WEAVING EXPENSES.

Coal.....	\$17,808 27
Jute oil.....	2,918 08
Sizing.....	3,843 71
Machine oils and engineer's supplies.....	1,753 20
Tools and repairs.....	15,117 68
Gas.....	5,391 39
Salaries.....	11,259 18
Water.....	2,614 17
Insurance.....	619 80
Miscellaneous (board of employes, stationery, etc.).....	1,550 39
Raw jute in process of manufacture (dye stuffs).....	126 80
	\$62,502 67
Less expense incurred in sewing bags and keeping sewing machines in repair:	
Say five per cent of coal.....	\$890 41
Say ten per cent of sizing.....	334 37
Say five per cent of machine oils, etc.....	87 66
Say ten per cent of tools and repairs.....	1,511 77
Say five per cent of salaries.....	562 96
Say ten per cent of gas.....	539 14
Say five per cent of water.....	130 71
Say five per cent of miscellaneous.....	77 52
	4,134 54
Net expense of spinning and weaving 3,424,197 yards of cloth.....	\$58,368 13
Or 17½ cents per yard.	

SEWING EXPENSES.

Percentage of gross spinning and weaving expenses, as per statement above.....	\$4,134 54
47,290 pounds twine manufactured and used in sewing bags, at 5 cents.....	2,364 50
Cotton twine.....	1,517 90
Total expense of sewing 3,026,600 grain bags.....	\$8,516 94
Or 27½ cents per bag.	

BALING EXPENSES.

4 yards of 12-ounce cloth at 5.2413 equals.....	22.7123 cents.
10 ounces of twine at 5.0 equals.....	3.125 cents.
2 ounces of 8-ply manilla rope at 15.0 equals.....	22.5 cents.
Total (per bale).....	48.3373 cents.
Cost of baling one grain bag (500 in a bale).....	0.0967 cent.
Cost of baling one yard burlap (700 to 800 yards per bale).....	0.0645 cent.

SHIPPING EXPENSES.

Drayage credited to stock department.....	
35 per month, on say 600 bales of goods (per bale).....	5.83 cents.
Freight on steamer to San Francisco (per bale).....	25.00 cents.
Total (per bale).....	30.83 cents.
Cost of shipping one grain bag.....	0.062 cent.
Cost of shipping one yard burlap.....	0.041 cent.

COST PRICE OF GOODS MANUFACTURED DURING THE YEAR ENDING JUNE 30, 1890.

<i>45-inch Burlap.</i>	
12 ounces of jute at 4.1005 per pound.....	3.0754 cents
Waste 15 per cent.....	0.4613 cents
Cost of spinning and weaving.....	1.7046 cents
Cost, loose.....	5.2413 cents
Baling.....	0.0845 cents
Cost in bale.....	5.3058 cents
Shipping.....	0.0410 cents
Cost delivered in San Francisco (per yard).....	5.3468 cents
<i>22x36 Grain Bag.</i>	
39 inches of 45-inch burlap, at 5.2413 cents per yard.....	5.6781 cents
Sewing.....	0.2748 cents
Cost, loose.....	5.9529 cents
Baling.....	0.0967 cents
Cost in bale.....	6.0496 cents
Shipping.....	0.0620 cents
Cost delivered in San Francisco (per bag).....	6.1116 cents
TOTAL OPERATING COST OF JUTE MILL FOR THE YEAR ENDING JUNE 30, 1890.	
Total expenses incurred, including value of supplies on hand July 1, 1890:	
Raw jute.....	\$180,714 70
Raw jute in process of manufacture.....	1,738 93
Coal.....	17,808 21
Sizing.....	3,531 61
Jute oil.....	3,171 52
Cotton twine.....	1,985 00
Rope (bale).....	1,542 08
Machine oils and engineer's supplies.....	1,817 45
Tools and repairs.....	17,331 41
Salaries.....	11,259 13
Gas.....	5,391 39
Water.....	2,614 17
Insurance.....	619 30
Miscellaneous.....	1,559 64
Freight on manufactured goods.....	1,710 75
	\$252,796 90
Less value of supplies on hand June 30, 1890:	
Raw jute.....	\$57,087 84
Raw jute in process of manufacture.....	1,349 87
Jute oil.....	253 44
Sizing.....	187 80
Cotton twine.....	167 70
Rope (bale).....	141 00
Machine oils and engineer's supplies.....	64 25
Tools and repairs.....	2,213 73
Miscellaneous.....	9 15
	61,454 78
Net operating cost for the year.....	\$191,322 12
Divided as follows:	
Value of raw jute used.....	\$123,626 86
Plus decrease in value of raw jute in process of manufacture.....	262 26
Net value of raw jute used in manufacturing.....	\$123,889 12
Spinning and weaving expenses.....	58,368 13
Sewing expenses.....	5,952 44
Rope used in baling.....	1,401 68
Freight on manufactured goods.....	1,710 75
	\$191,322 12

GOODS SOLD DURING THE YEAR ENDING JUNE 30, 1890.

2,046,900 22x36 grain bags, at 6½ cents.....	\$133,048 50
467,500 22x36 grain bags, at 6½ cents.....	\$30,387 50
Less rebate for freight to San Francisco, bags being received on board vessels at San Quentin, at 50 cents per thousand.....	233 75
	30,153 75
45,500 22x36 grain bags, at 6½ cents.....	3,071 25
180,000 22x36 grain bags, at 6½ cents.....	\$12,150 00
Less rebate for freight to San Francisco, bags being received on board vessels at San Quentin, at 50 cents per thousand.....	90 00
	12,060 00
69,000 22x36 grain bags, at 6½ cents.....	4,743 75
6,500 22x36 grain bags, at 7 cents.....	455 00
1,000 22x36 grain bags, at 7½ cents.....	71 25
14,500 22x36 grain bags, at 7½ cents.....	1,051 25
51,400 22x36 grain bags, at 7½ cents.....	3,855 00
144,800 22x36 grain bags, at 7½ cents.....	11,183 25
13,500 imperfect grain bags, at 5 cents.....	675 00
50 yards 45-inch burlap, at 6 cents.....	3 00
2,246 yards 45-inch burlap, at 6½ cents.....	151 61
16,713 yards 45-inch burlap, at 6½ cents.....	1,086 36
33 yards apron cloth, at 7½ cents.....	2 48
50,597 yards 36-inch burlap, at 5½ cents.....	2,858 74
1 bean cloth, 30x30 feet.....	6 75
3 bean cloths, 40x40 feet, at \$11 75.....	35 25
2 bean cloths, 50x50 feet, at \$18 75.....	37 50
2 bean cloths, 45x45 feet, at \$14 50.....	29 00
31,700 pounds 5-ply twine, at 7 cents.....	2,219 00
4,220 pounds 3-ply twine, at 8 cents.....	337 60
59,250 pounds jute rope, at 1½ cents.....	889 60
235 pounds loom waste, at 1 cent.....	2 06
16,106 pounds loom waste, at 1½ cents.....	181 19
3,770 pounds loom waste, at 1½ cents.....	47 13
1,434 pounds card waste, at 1 cent.....	14 34
Issued and charged to departments of the prison:	
70 yards 45-inch burlap, at 6 cents.....	4 20
195 yards 45-inch burlap, at 6½ cents.....	12 70
75 pounds 5-ply twine, at 6 cents.....	4 50
Drayage charged in bills.....	3 50
Net amount of sales.....	\$208,074 51
PROFIT AND LOSS ACCOUNT.	
Net amount of sales of jute goods during the year ending June 30, 1890.....	\$208,074 51
Value of goods on hand June 30, 1890, at cost price.....	2,985 23
	\$211,059 74
Deduct:	
Net operating expenses for the year.....	\$191,322 12
Value of goods on hand July 1, 1889.....	1,966 64
	193,288 76
Net profit on goods sold during the year.....	\$17,770 98
Or 9.34 per cent on cost price.	

The cost of maintaining this prison for the year, as per abstract of expenses, Clerk's report, has been \$210,949 42. The average number of prisoners under confinement was one thousand three hundred and eighty-one and one sixth, making the per capita cost per day 41.84 cents—2½ cents less than during the preceding year.

Several items of expense are now incurred in the maintaining of the prison, which did not exist in former years. One of them is the expense attached to running of the Corliss engine in the shop building, which amounted last year to \$6,434 91. Fuel in the shape of waste and refuse lumber, sawdust, and blocks, was formerly obtained from the sash and floor and furniture factories in quantities more than sufficient to feed the boilers of this engine. All the manufacturing industries supplied with power by this engine have been abandoned, but the necessity for

running it still exists, as it is the only source from which we can derive power to drive the machinery in the carpenter shop and machine shop, the elevator to the Commissary Department, and to supply steam to the general kitchen, laundry, and similar places. Whereas, formerly the running of this engine cost practically nothing, the coal now consumed by it is quite an item of expense, which must necessarily be charged to the maintaining cost of the prison.

The hours of labor for the guards having been greatly reduced, a larger force is necessarily employed, and the salary roll is correspondingly increased.

An additional item of expense is the cost of prisoners' clothing, none of the prisoners being permitted now, as ordered by your honorable Board, to wear any article of clothing not furnished by the bill of dress, and they are now all clothed throughout with goods of distinctive manufacture for prison use. The increase in expense on this account alone amounts to about \$8,000 per year.

IMPROVEMENTS.

Appropriations were made by the last Legislature for repairs of old buildings, and for the erection of new buildings, as follows: For roofs of cell buildings, \$4,000; for building for guards' quarters over lower gate, \$1,000; for front entrance building, offices, and officers' quarters, \$10,000; for building for the accommodation of the insane prisoners, \$20,000.

The old and leaky asphaltum roofs of the four cell buildings have been removed and replaced by first-class roofs of corrugated iron, and the cells are now protected from the rains. A commodious and substantial brick building for quarters for the guards has been erected over the lower gateway, and a very handsome structure has been erected at the front entrance; it presents a very imposing appearance, and needs only the finishing touches to be ready for occupancy. The appropriations for these much needed improvements have been carefully economized, and a small balance remains unexpended to the credit of each fund.

When the Superintendents of the asylums for the care of the insane met with the Prison Directors, by invitation, to consult on plans for a building for the accommodation of the insane prisoners, it was discovered that there existed a great difference of opinion as to the intention of the Legislature in making the appropriation, and the difference proved so radical that no plans could be agreed upon at that meeting. The dictates of humanity require that an insane person shall receive proper care, and public safety demands that the viciously insane shall be securely confined and prevented from doing injury to the community. Experience teaches that the ordinary safeguards of an asylum are insufficient to detain the cunning criminals who wish to escape; even with all the precautions of walls, and armed guards, and constant watchfulness, there will always be a certain percentage of escapes from prisons, and it seems to me that there should be no inducement held out for criminals to feign insanity in order to be transferred to quarters that can be easily "beaten" as the criminals phrase it. For the safekeeping of the unfortunate convicts who are insane, and to defeat the schemes of those who pretend insanity, the quarters for the accommodation of the insane prisoners

should be located within the prison walls, thus insuring greater security than can be looked for when the building is remote and without the protection of a patrol at night as well as in the daytime. A separate force and a separate staff of officers would be required for quarters without the prison walls, and the statute does not contemplate that expense. The Asylum Superintendents urged the choosing of a site at some distance from the prison, stating that, after spending the appropriation for the building and furnishing, then it would be proper to call on the Legislature for a further appropriation to maintain the new institution. These views were so strongly urged that there has been hesitation about choosing a site, and as the surroundings must necessarily determine the character of the plans, no selection has yet been made.

The Act making the appropriation is very brief; the title reads: "An Act to provide for the erection at San Quentin State Prison a building for the accommodation of the insane prisoners, and making an appropriation therefor," and the first section contains all that pertains to the quarters: "There shall be erected upon lands belonging to the State in connection with the State Prison at San Quentin a building of sufficient capacity to accommodate the insane prisoners of the State Prisons of the State, the same to be constructed under the direction of the Board of State Prison Directors."

I have submitted an outline plan for "a building of sufficient capacity to accommodate the insane prisoners of the State Prisons of the State," in accordance with the language of the statute, and I await instructions.

PURCHASE OF ADJACENT LANDS.

The money appropriated "to purchase adjacent lands for the use of the prison, together with improvements thereon," has been expended as follows: \$2,500 for ninety-five acres of tide lands, conveyed by assignees of Wm. T. Coleman, together with whatever interest they may have in about twenty acres more, adjoining; \$500 for two houses owned by Mrs. Jones; \$100 for house owned by D. Sutherland; \$100 for house owned by W. O'Grady; and \$300 to be paid for house owned by Mrs. Saultry when the estate of her late husband is settled by the Probate Court. The houses owned by John Mann and Henry Schlosser are still held by them, as they refuse to sell for the sums named in the appropriation. Mrs. Edwards and her daughter refuse to sell their houses and the two acres of tide lands. Negotiations for the purchase of land to straighten the north boundary line of the prison tract and for right of way to change the county road have not been completed, as there is some legal complication about the ownership of the adjoining tract.

IDENTIFICATION OF CRIMINALS.

The establishment of some system for the absolutely certain identification of criminals has always been deemed of the utmost importance by prison and police officials, who often found themselves at a loss, even with the aid of photographs, to determine positively and beyond a doubt the identity of suspected criminals. Numerous attempts were made to devise such a system, but all of them were found defective, until at last a French official conceived the idea that the proportions of certain parts of the human body remained fixed and unchangeable after maturity,

and that the measurements of these parts were not exactly alike in any two persons. After years of experiment a system of measurement based upon these facts, was devised by the officer and adopted by the French police, by which they were enabled to accurately determine the identity of any person whose description was in their possession. This system, called the "Bertillon," after its inventor, proved so successful in France that other countries are following the example and adopting the same.

The "Wardens' Association, for the registration and identification of criminals," was organized in the United States, its founders believing that the Bertillon system of measurements, if adopted by all the principal prisons of the United States, would prove a strong factor in protecting society from the ravages of confirmed criminals, many of whom escape merited punishment through want of identification, or, if convicted, upon a plea of first offense. At the earnest request of its President, your honorable Board authorized me to become a member of the Wardens' Association, and the Bertillon system of measurements was introduced at this prison. The following description of what this system is may prove of interest: The instruments and apparatus used consist of two pairs of sliding compasses, one of large size for the foot, forearm, fingers, and a smaller pair for the ear; graduated measures for height, arms, and trunk; a square, and stools, tables, etc. All the instruments are of French make, their measuring scales being based upon the metric system.

Measurements are taken as follows, the subject being barefoot and in his shirt sleeves:

First—Height of person standing.

Second—Length of outstretched arms from finger tip to finger tip, the arms being extended at right angles to the body.

Third—Length of trunk from bench to the top of the head of person seated.

Fourth—Length of head from cavity at root of nose to remotest point of the back of the head.

Fifth—Width of head between the two points most remote from each other, over the ears, and on a horizontal plane at right angles to the measurement of length.

Sixth—Length of ear from top of the rim to the lowest point of the lobe.

Seventh—Length of left foot.

Eighth—Length of left middle finger from point of knuckle to the tip of the finger, the finger being placed at right angles to the back of the hand.

Ninth—Length of left little finger, determined in the same manner as that of middle finger.

Tenth—Length of left forearm from the point of the elbow to the tip of the farthest projecting finger, the elbow being placed at a sharp angle with the upper arm.

Eleventh—Analysis of color of the left eye:

(a) Color of inner circle (central) pigment.

(b) Color of the extreme (peripheric) circle.

(c) Possible confusion of the pigment (a) with an adjoining class.

(d) Peculiarities.

Twelfth—The nose:

(a) Profile of the ridge, root, and base.

(b) Dimensions: length, projection, and breadth.

(c) Peculiarities.

Thirteenth—The inclination, apparent height and width, and peculiarities of the forehead.

Fourteenth—Marks and scars: nature and origin, direction or inclination, approximate dimensions and accurate location with regard to specified parts of the body.

Besides the foregoing measurements, two photographs are taken of each subject; one showing the profile of right side of the face, the other the full face.

The Bertillon system has been adopted by about twenty penal insti-

tutions in the United States, and all descriptions are forwarded to and filed in the central office of the Wardens' Association, at Chicago.

AN ATTORNEY FOR THE PRISON.

The need for the services of an attorney is shown in the frequent calls upon the Warden to produce prisoners in Court, and show why they should not be set at liberty on some very fine technical point that may arise from a clerical error in making out the commitment from the judgment roll, or from some theory of law on which even the Judges of the Supreme Court entertain a difference of opinion. The Warden should be authorized to employ an attorney whenever needed, or there should be a legal adviser attached to the official staff of the State Board of Prison Directors.

I am now defendant in three suits brought by released prisoners, who were held in custody in accordance with the terms of their commitments, and they have set up claims for damages, although the Supreme Court was at first divided on the point at issue, and re-submitted the cases for hearing before the full Court. Even after the Supreme Court has decided the question (that imprisonment in the State Prison in satisfaction of a fine is not a valid sentence), prisoners have been committed by judgments couched in exactly the same words as those set aside as invalid.

Occasionally I am called upon to notify a District Attorney that the commitment of a prisoner seems to me to be defective, and inquiry discloses the fact that the Clerk of the Court has made an error, which can be easily corrected by making a new commitment. Sometimes the defect is beyond remedy, and the prisoner profits by the error; sometimes the point is not readily determined, and the skill of a lawyer is necessary to arrive at the proper conclusion.

PENALTIES FOR OFFENSES.

The Penal Code makes it a punishable offense to bring into the prison a letter, or any writing, or to take out any letter, or anything from a convict, without the consent of the Warden, but any evil-disposed person may bring in opium or intoxicating liquors, or even explosives, or firearms, and there is no way to punish the offender, under the laws, for that offense. A bill should be prepared to present to the Legislature to fix a penalty for such offenses.

I desire to return my thanks to you, gentlemen, and to the officers of the prison, for unvarying courtesies.

Very respectfully,

JOHN McCOMB,
Warden.

CLERK'S REPORT.

TABLE No. 1.

Cash Receipts of the State Prison at San Quentin during Forty-first Fiscal Year, ending June 30, 1890.

TURNKEY'S REPORT.

SAN QUENTIN, July 16, 1890.

Gen. JOHN McCOMB, Warden California State Prison, San Quentin:

SIR: I herewith submit my tabulated reports of the Turnkey's Department for the fiscal year ending June 30, 1890.

Very respectfully,

B. DOUGHERTY,
Turnkey.

TABLE No. 1.

THE BERTILLON SYSTEM OF MEASUREMENTS.

REPORT OF THE ASSISTANT TURNKEY.

SAN QUENTIN PRISON, June 30, 1890.

Gen. JOHN McCOMB, *Warden*:

SIR: In accordance with your instructions of April twenty-fifth, relative to the introduction of the Bertillon system of measurements for the identification of criminals, I beg leave to submit the following report explanatory of the process adopted, together with a compilation of tables exhibiting the result of eighty-four distinct measurements:

INSTRUMENTS AND APPARATUS.

The instruments now used are made in France with metrical divisions, and comprise sliding compasses, large size, with which to measure the foot, forearm, and the middle and little fingers, and small size, with which to measure the ear.

GRADUATED MEASURES.

One for heights, one for outstretched arms, and one for the trunk. Square to place on the top of the head while taking height and trunk measure, together with stools, tables, benches, etc.

All lineal measures are taken in the metric system in metres, centimetres, and millimetres, instead of in feet and inches, and fractions of an inch.

A metre is equal to thirty-nine inches and three hundred and sixty-eight one thousandths of an inch, American standard, or thirty-nine inches and three hundred and seventy one thousandths of an inch, English standard.

A centimetre is equal to three thousand nine hundred and thirty-seven ten thousandths of an inch, English.

A millimetre is equal to three thousand nine hundred and thirty-seven hundred thousandths of an inch, English.

In round numbers, thirteen inches equal thirty-three centimetres, or sixty-five inches equal one hundred and sixty-five centimetres and one millimetre.

The following is the order in which measurements and descriptions of prisoners are taken, the subject being barefooted and in shirt sleeves:

First—The Height.

The measurement of the prisoners standing erect.

Second—The Outstretched Arms.

The measurement from finger tip to finger tip, the arms being extended right angles to the body.

Third—The Trunk.

The measurement from the bench to the top of the head of a person seated.

Fourth—The Length of the Head.

Measurement from the cavity at the root of the nose to the remotest point of the back of the head.

Fifth—The Width of the Head.

Measurement of the diameter from side to side, between the two points most remote from each other, situated over the ears and on a horizontal plane at right angles to the measurement of length.

Sixth—The Ear.

Measurement from the top of the rim to the lowest point of the lobe.

Seventh—The Left Foot.

Measurement from the extreme of the back of the heel to the end of the farthest projecting toe.

Eighth—The Left Middle Finger.

Measurement from the point of the knuckle to the tip of the finger, the finger being placed at right angles to the back of the hand.

Ninth—The Left Little Finger.

Same as for middle finger.

Tenth—The Left Forearm.

Measurement from the point of the elbow to the tip of the farthest projecting finger, the elbow being placed at sharp angles with the upper arm.

Eleventh—The Left Eye.

Analysis of the colors of the eye:

- (a) The color of the inner (central) circle, pigment.
- (b) The color of the extreme (peripheric) circle.
- (c) The possible confusion of the pigment (a) with an adjoining class.
- (d) Peculiarities.

Twelfth—The Nose.

- (a) The profile form of the ridge, root, and base.
- (b) The dimensions: length, projection, and breadth.
- (c) Peculiarities.

Thirteenth—The Forehead.

The inclination, apparent height and width, and peculiarities.

Fourteenth—Marks and Scars.

Nature and origin, direction or inclination, approximate dimensions and accurate location with regard to specified points of the body.

PHOTOGRAPHED.

Two views, one a profile of right side of face and one of full face.

During the past three years about twenty penal institutions in the United States have adopted the Bertillon method of identification.

The descriptions are filed in the central office at Chicago, and in the event of subsequent arrest and remeasurement in any part of the world, the remarkable accuracy of the system makes identification absolutely certain.

CHAS. N. FISH,
Assistant Turnkey.

BERTILLON MEASUREMENTS

At State Prison, San Quentin, California, April 23 to June 30, 1890, inclusive.

Register Number.	NAMES.	Head, Length.		Head, Width.		Middle Finger.		Foot.		Forearm.

PHYSICIAN'S REPORT.

JUNE 30, 1890.

To General JOHN McCOMB, Warden California State Prison at San Quentin.

SIR: While the death rate is smaller than last year, yet it has not kept within my expectations, being but two less than the previous year. This was due to the very severe weather we had in January, when the whole country was suffering from the "Grippe;" the men, while not dying from the "Grippe," were so affected by it that they never recovered; this, particularly among men who were troubled with lung difficulties. Thus, we had ten deaths in April, which was an unusual number; but you will see by the tables that this occurred among the phthisical patients almost entirely.

I think I can see the benefit of the resolution of the State Board of Prison Directors, passed about a year ago, requesting all prisoners troubled with lung difficulties to be sent to Folsom, in the decreased number of consumptives coming to this prison; there is certainly less consumption here than formerly. I have but two or three that show evidence of that trouble at present.

The only approach to an epidemic we have had is that of "La Grippe" in January, when nearly two hundred men were laid up with it. But as a convict is a creature of circumstances (one getting sick because he sees his neighbor sick) in a marked degree, I don't doubt that in many cases they were not nearly so sick as they pretended. With the unusually bad weather we had, it is fortunate that so few deaths occurred, only one dying from direct cause.

The sanitary condition of the place was never in as good condition as at the present time, due to your prompt adoption of my suggestion to have the walks asphalted, a new cesspool constructed, the ground around the swimming tank and all the ground back of the cell houses covered with bituminous rock. The putting in of a new cesspool I consider to be one of the best improvements that has been made in years. The buckets are all emptied into this every morning, thus leaving the cesspool free from this accumulation, and as the place around is all laid with bituminous rock, it is easily kept inodorous and clean by flushing, thus preventing the smell that constantly arose from it when we only had the bare bricks.

The new roofs of corrugated iron on the cell buildings have made these structures far more comfortable—as nearly perfect as it is possible to make old cells constructed without care as to sanitary conditions.

The cells have all new bunks in place of the old ones that have been torn out, making it possible to keep out the vermin, so that the men are troubled with them to a minimum degree.

The health of the prison has been about as usual; the calls have been somewhat more numerous than before, but the excuses are less than last year.

The following tables show the number of deaths, cause of death, the

month in which they died, and the number in the hospital during the month:

July, 1889—Number in the hospital, 14. L. G. Sessocovich, bronchial asthma.
 August, 1889—Number in hospital, 16. G. W. Scroggins, bronchitis.
 September, 1889—Number in hospital, 18. R. Martinez, phthisis.
 October, 1889—Number in hospital, 15. R. Morales, cystitis; Thos. Carrick, consumption; C. Mendosa, consumption; How Ah Fook, abscess on back; Wong Ah Hung, general debility.
 November, 1889—Number in hospital, 15. Jim McElarney, scrofula; Wm. Gallagher, consumption; Thos. Rifley, pneumonia; C. Quinthero, heart failure; T. Espinosa, consumption.
 December, 1889—Number in the hospital, 21. A. Johnson, rupture pulmonary artery; W. H. Stroupe, heart clot. These two men fell dead in the yard.
 January, 1890—Number in hospital, 23. Ying Sing, consumption; W. B. King, pneumonia; Thos. Finnerty, consumption.
 February, 1890—Number in hospital, 20. P. Sepulveda, pneumonia; So See Rack, consumption.
 March, 1890—Number in hospital, 16. W. Johnson, consumption.
 April, 1890—Number in hospital, 18. Jim Kahala (Indian), asthma; Chin Tong Jim, scrofula; Guy Shell, consumption; John Adam, cirrhosis of liver; John Miller, pneumonia; S. S. Hildebrandt, consumption; Ed. Hanley, consumption; M. Semenario, consumption; A. Angula, consumption; Geo. Langley, consumption.
 May, 1890—Number in hospital, 10. No deaths this month.
 June, 1890—Number in hospital, 11. Robert Smith, suicide. This prisoner caused death by severing both radial and ulnar arteries at the wrist and bleeding to death.

RECAPITULATION.

Abscess on back	1
General debility	1
Scrofula	2
Heart failure	1
Rupture of pulmonary artery	1
Heart clot	1
Cirrhosis of liver	1
Asthma	1
Suicide	1
Total	32

In this connection I wish to remark on the unusual number of deaths which occurred in April. The hard weather of January found us with a large number of consumptives on hand; and although they were in the hospital and received the best care, they steadily failed, and the end came during the month of April—no less than six dying of consumption alone during that month—thus confirming my predictions to you in the matter.

In contrast with the death rate for April, I call attention to the fact that there were no deaths during May, and only one in June, and that a suicide.

But for the number of deaths in April, and from the debility caused by the epidemic, the rate for the year would not exceed 2 per cent.

On looking at the statistics I find that in the first quarter there were calls, 1,194; excused, 490. Second quarter: calls, 1,109; excused, 244. Third quarter: calls, 1,773; excused, 548. Fourth quarter: calls, 1,485; excused, 559. Making a total of 5,561 calls and 1,841 excused—this with a monthly average of 1,381 men.

We have an increased number of convicts, and a less number of deaths—the death rate this year being $2\frac{1}{2}$ per cent instead of $2\frac{1}{2}$ per cent last year.

We have had two deaths from heart disease—men who fell dead and

ought not to be charged to the sick list—and one man from suicide, making only twenty-nine deaths that ought to be charged to the sick list. With these three deducted we have a death rate of only 2 per cent.

In conclusion, I wish to thank you for many favors received, many suggestions listened to, for uniform courtesy and unfailing kindness and consideration from yourself and my brother officers.

Very respectfully,

F. C. DURANT, M.D.

REPORT OF THE WARDEN

OF THE

STATE PRISON AT FOLSOM, CALIFORNIA.

WARDEN'S REPORT.

To the honorable State Board of Prison Directors:

GENTLEMEN: I have the honor to submit herewith my annual report for the forty-first fiscal year, ending June 30, 1890, including the reports of the Deputy Warden, Physician, and Commissary, showing in detail the operations of the Folsom State Prison.

The report of the Clerk of the prison, also submitted herewith, sets forth fully the financial transactions of the prison for the year.

The last Legislature, at my request, reduced the appropriation for the support of the prison from \$250,000 for the thirty-ninth and fortieth fiscal years, to \$220,000 for the forty-first and forty-second fiscal years.

The average number of convicts on hand during the fortieth fiscal year was 488.3. For the forty-first fiscal year, just closed, we had an average of 623, an increase of 134.7. This increase was far beyond our calculations, and necessitated a slight increase in the guard force.

Under the circumstances, it is with pleasure that I am enabled to report that our expenditures have been kept within the reduced appropriation, and that we will have sufficient funds for the forty-second fiscal year without a deficiency.

As shown in detail by Table No. 8 of the Clerk's report, the net cost of maintenance for the year was \$105,241 48. Average number of prisoners on hand, six hundred and twenty-three. Per capita per diem, 45.8 cents.

This is a reduction in the per capita per diem cost of 8.8 cents from the previous year. This reduction is caused by a variety of reasons: principally by close attention to the details of expenditures, requiring contractors to supply goods fully up to the standard, and by the increased number of prisoners. As claimed in a former report, the larger the daily average of convicts the cheaper they can be cared for, and the less should be the per capita per diem cost.

By reference to Table No. 7, of the Clerk's report, it will be seen that there was a balance on hand of available cash assets, after discharging all liabilities for the year, of \$14,872 79, which, added to the appropriation of \$110,000 for the forty-second fiscal year, will afford ample resources to meet all liabilities to July 1, 1891.

During the year we cut but little stone for sale, as our force was employed on the dam and canal. We supplied the stone, in the rough, for the steps and driveway of the State Capitol grounds, and for one small private job.

The net profit of the quarry was \$1,968 98; profits of the farm, \$3,567 49; labor, \$210; making a total of earnings for the year of \$5,694 47, as shown by Table No. 4, of the Clerk's report.

The last Legislature appropriated \$112,500 for the construction of a power house to utilize the water-power of the American River, necessary wheels, machinery, etc., to operate the same, pump and pipe for irrigating purposes, and other expenses incidental thereto.

On July first there had been expended of this appropriation (Clerk's

Report, Table No. 7) \$50,986 97, leaving a balance of \$61,513 03. The foundation of the power house, by far the heaviest portion of the work has been completed up to the water level. The double turbine wheels, six in number, are ready to go in place, and we confidently expect to utilize the power in time for irrigating next spring.

THE DAM AND CANAL.

In connection with the power house, work has progressed steadily on the dam and canal during the past year. The unusual floods and long continued high water of last winter and spring retarded the work on the dam very materially. At times the water passed over it to a depth of twenty feet. The dam stood this severe test in its unfinished condition without the slightest damage, and as it will be completed before it is called upon to stand another such test, there need be no fears of its permanence and stability.

The work taken together—the dam, canal, and power house—is of such unusual magnitude that it can only be appreciated by a personal inspection.

There has been laid in the dam, canal wall, and power house, up to the present time, over forty-four thousand cubic yards, or one million one hundred and eighty-eight thousand cubic feet of stone. There have been shipped out nearly eight thousand cars of rubble rock and decomposed granite. Sixteen thousand barrels of cement have been used.

These figures will only give an inadequate idea of the amount of labor performed since the inception of this work two years ago.

The dam proper and head gates will certainly be completed before the winter rains. That places the river under control, and leaves the balance of the work easy of accomplishment. As it takes the question of the elements entirely out of the calculation, I confidently hope to complete the State portion of this work during the early portion of next season.

It will not be amiss in this report to refer to the circumstances under which this work was recommenced two years ago by your honorable Board.

The following letter, written by myself, in response to a request from the Governor's office, covers the entire subject, and I submit it in full.

STATE PRISON, SACRAMENTO COUNTY, CAL., November 16, 1889.

Hon. M. D. BORUCK, *Private Secretary*:

DEAR SIR: I inclose you herewith, as per your request, copies of the propositions submitted by H. P. Livermore, President of the Folsom Water Power Company, to the Board of Directors, together with the subsequent contract made after the acceptance of the proposition. As sent you, it is taken from the official record, copied by the Clerk of the prison.

You will recollect that the proposition submitted by Mr. Livermore was in response to an invitation by Governor Waterman, sent from the prison on the eighteenth of April, 1888. The Governor, in company with Mr. Steffens, Secretary of State Hendricks, and some other gentlemen, visited the prison on that date, and, after an examination into the conditions of the contracts then existing between the State and the Folsom Water Power Company, as the successors in interest of the Natoma Water and Mining Company, and realizing the value to the State of the resultant power on the completion of the works as then proposed, he invited Mr. Livermore to meet him and the State Board of Prison Directors on the fifth day of May following for the purpose of coming to a amicable understanding that would result in the immediate prosecution and completion of the dam and canal.

To make the matter plain to you I will go back to the history of the legislation which resulted in the selection of the present site of what was intended at that time to be

Branch State Prison; that will also throw some light upon the subsequent contracts made with the Natoma Water and Mining Company, through their agent, Mr. H. G. Livermore, which subsequently passed into the hands of his two sons, who now represent the Folsom Water Power Company.

In 1858 the Legislature authorized the Board of Prison Directors to select a site for a Branch State Prison. Ten years passed without anything being done under the provisions of that Act. The Legislature of 1868 again took up the matter, and directed the Board of Directors to select a site before the first of July, 1868, and limiting the selection to two sites, *i. e.*, Rocklin or Folsom.

The Board of Prison Directors decided to locate the Branch Prison on its present site (on the thirtieth day of June, 1868), and that day obtained from the Natoma Water and Mining Company a deed for three hundred and fifty acres of land, supposed to cover all the quarries necessary for prison purposes, and also the right to the first five feet fall of the canal. The consideration in this deed was that the State should pay \$15,000, in convict labor, to be used on said canal (upon which work had been started by the Natoma Company), and the dam necessary for the same, at the rate of 50 cents per diem for each convict capable of such work, to be paid for at the completion of said work; that is to say, the consideration from the State to the Natoma Company, *i. e.*, the convict labor aforesaid, was to be delivered to the company as soon after the completion of the prison as was practicable.

Six years passed, and still nothing was accomplished. In 1874 the Legislature passed another Act, authorizing the construction of the prison, and appropriating \$175,000 for that purpose.

Upon the proper surveys being made, it was discovered that the three hundred and fifty acres secured to the State by the deed of June 30, 1868, did not cover all the lands desired by the State, and, in fact, did not cover the lands upon which the present prison building is located.

The Board of Directors then secured another deed from the Natoma Company, for one hundred and thirty-three acres of land, the consideration being the same as in the first deed, *viz.*: \$15,000 payable in convict labor at 50 cents per diem for each convict, under the same conditions as the former deed.

The beginning of work on the prison in the fall of 1874, the failure of Contractor Miles, the cessation of work for a period of three years, are all facts you are familiar with, and it was not until July, 1880, and after a subsequent contract had been entered into with Mr. Livermore, looking to the employment of three hundred and fifty convicts, which was made a condition of the final appropriation, made by the Legislature in 1878, that the prison was completed and occupied.

Now, bear in mind, that when the prison was completed in July, 1880, the State had not paid anything for the lands so deeded, as above, nor for the quarries upon said land, nor for any other purposes; the outlay had been solely for the construction of the buildings.

In the first two contracts it was agreed and understood that upon the completion of the prison and its occupancy, the labor should be furnished for the construction of the company's dam and canal, of which the State was to receive a five-foot fall, from a thirty-foot canal, equal to about two hundred and twenty horse-power.

Prior to the occupancy of the prison, the Natoma Company had expended, as shown by their books, \$119,000, in the construction of the railroad from Folsom to the site of their dam, and in putting in the foundation for their dam, which was done in 1868.

In the fall of 1881 the Folsom Water Power Company, as the successors in interest of the Natoma Water and Mining Company, made a demand upon the Board of Directors for the labor necessary to complete their dam and canal, in accordance with the deeds heretofore made to the State. After some little delay some eighty convicts were assigned to work upon the line of the canal.

Very soon a difference arose between the Water Power Company and the Board of Directors as to the proper construction of the deeds, or grants, to the State. That is, whether the two deeds calling for thirty thousand days' labor each meant one and the same thing, or whether they were separate deeds calling for sixty thousand days' labor in the aggregate.

The Board of Directors, under the advice of Attorney-General Hart, held to the former view, which position was disputed by the Water Power Company, and ended in the latter company withdrawing their men and refusing to proceed further with the work under such conditions. Subsequently the State, through the Attorney-General, brought suit against the Water Power Company to compel them to proceed with the construction of the dam and canal, which suit was decided by Judge McFarland, of the Superior Court of Sacramento, adversely to the State. An appeal was taken to the Supreme Court by the Attorney-General, and that Court sustained the decision of Judge McFarland, *in effect*, that the State was powerless to enforce the completion of the dam and canal.

After the decision of the Supreme Court the matter remained in abeyance, and no further attempt was made to proceed with the work until it was taken up by Governor Waterman in April, 1888.

He went to Sacramento to see him about it, and pointed out the advantages to be derived to the State by the early completion of the work. He readily grasped the situation, and on May fifth Mr. H. P. Livermore, the Manager of the Folsom Water Power Company, visited the prison on the eighteenth of April, spoken of above.

On May fifth Mr. H. P. Livermore, the Manager of the Folsom Water Power Company, visited the State Board of Prison Directors in the Governor's office in Sacramento, and,

after a long consultation, and many plans and suggestions were made by both parties. adjournment was taken to Folsom Prison, the Governor also being present, and on the evening proceedings were had of which I send you the record.

You will note that Livermore's first proposition was rejected, and he was permitted to offer a second proposition, which was far more beneficial to the State.

You will also note that in the subsequent contract no specific number of days' labor was agreed upon, for several reasons.

First, we were in this condition: the Folsom Water Power Company owned the land front of the prison and inside of the line of the canal, which completely barred ingress and egress to and from the prison. They also owned the railroad, without the use of which our quarries would have been of no value.

In the crude deeds and contracts originally made, there were a great many things omitted that were of absolute necessity to the State, and, especially to a large public institution of this kind; among them was the right to pump water across the lands of the company, the right of ingress and egress over their lands, the right to maintain guard posts and warehouses upon their lands, without which the working of the prisoners could not have been accomplished in the quarries, probably deemed of no importance at the time the original deeds were made. With a population of six hundred to eight hundred people, and with half a million dollars' worth of property, now owned by the State, the rights and privileges became of vital importance; and Mr. Livermore, who was anxious to complete the dam and canal, realized that the concession of these privileges to the State was of too great a value, and held on to them with some degree of tenacity.

Again, the original deeds called for only five feet fall. In 1868, when that deed was made, that was supposed to be all that would be necessary for any use; but twenty years have made a vast change in the uses of power, and the requirements of public institutions, occasioned by the large increase of population, and particularly the use of water for irrigation, power, etc.; hence, what would have been considered amply sufficient in 1868, was comparatively insignificant in 1888; and if the State was going to construct for itself a water power, it would have been extremely bad judgment to have expended the labor and money upon a scheme that would have been totally inadequate to their wants; hence, it was decided by the Board, with the concurrence of the Governor, that it was better to accept the original contracts as the basis of future operations, and enlarge the same so as to fully meet the future requirements of this institution in point of power and water for irrigation and domestic use; hence, the canal was enlarged from thirty to fifty feet in width, and the State fall was increased from five feet to seven and thirty three hundredths feet, giving to the State over eight hundred horse-power instead of three hundred and twenty horse-power, as was originally contemplated.

Now, in regard to the privileges secured to the State, and the protection of the rights of the State, you will observe by a close scrutiny of the contract that the State is the roughly protected at every point.

The Water Power Company agrees to furnish all material for the construction of the dam and canal, the engineering plans and details, and to grant to the State all privileges asked by the State, viz.: The perpetual use of their railroad from the town of Folsom free of cost; the right to pump all water for irrigation and domestic use upon any portion of the said lands; the right to maintain guard towers and warehouses upon the lands of the company; the right to run sewage across their lands to the river; to obtain gravel from the bed of the river; to construct roads upon their lands, and the perpetual right of ingress and egress over their lands.

I contended then, and contend now, that outside of the water power obtained by the State, that these privileges, rights, easements, etc., were of more value to the State than all the labor the State will expend upon the dam and canal.

Until these questions of privileges and easements were settled, the claims of the Water Power Company were a constant menace to the property of the State, and, without proper adjustment of the same, it would have ended, eventually, in the State being compelled to bring suit for a condemnation of their property, which would have involved a large outlay of money, or else the abandonment of the prison and total loss of all money heretofore expended.

You will note, also, that the entire water of the canal must flow through the State fall, or, in other words, the Water Power Company gets no water whatever, except what passes through the State fall, and that the right to that water is perpetual; hence the Water Power Company has no control whatever over the power of the State; the deed is absolute and unqualified.

You will note also the penalties attached for a failure on the part of the Water Power Company to comply with the conditions of their contract. For any failure on their part they forfeit all rights and privileges, while those granted to the State remain in full force and effect. The State, however, incurs no penalty whatever. The Water Power Company is simply dependent upon the good faith of the officers of the State to carry out their part of the contract, with no penalty attached for a failure so to do.

If the various officers of this State are at all times as zealous in guarding the State interest as was done in this particular instance, we will certainly be fortunate beyond anything that has ever occurred heretofore. To the credit of the Board and the Governor who was instrumental in bringing this contract about, they need not be ashamed to have every line of the contract scrutinized by even the San Francisco "Chronicle."

Now, as to the value of the power to the State, and the uses that can be made of it by the State:

It is conceded that water power is worth the amount that the difference in cost between steam and water power will pay interest upon.

The "Leffell" Company, who manufacture the best waterwheels in America, with the plans and specifications of the State fall furnished them, figure that with six turbine wheels, under the conditions of the present canal, they will develop one hundred and thirty-four actual horse-power to each wheel, that would make a total of over eight hundred horse-power for the six wheels.

It is estimated that with the present price of coal and fuel in this State, each horse-power developed by steam costs for fuel alone from \$80 to \$100 per annum.

Taking the former figure as a basis, eight hundred horse-power at \$80 each per annum for fuel, would cost \$64,000 per annum; to generate the eight hundred horse-power developed by water would cost \$64,000 per annum less than if generated by steam power. Sixty-four thousand dollars per annum is good interest upon a million dollars; hence, the water power obtained by the State under the present arrangement is worth, as a business proposition, over one million dollars; such is the estimate of such eminent engineers as Colonel A. W. Von Schmidt, General Alexander, and any others who will take the trouble to examine into the question.

In addition to the value of this power, we will obtain water sufficient to irrigate our tract of five hundred acres, which of itself renders it, as an agricultural proposition, of great value. We expect, upon completion of the power, to utilize a portion for electric lights, for pumping water for irrigation and domestic use, for handling our derricks in the quarries; and, when that is accomplished, we will still have more than five hundred horse-power unused, and the Legislature will be called upon to solve the problem of how this can be best utilized.

I believe I have gone over the main points involved in this entire matter, and from what I have said, and from the contracts and propositions submitted by Mr. Livermore, you can gain an intelligent idea of the actual condition of the matter.

Anything that does not appear quite plain, I will take pleasure in elucidating at length, but I fear I have already taxed your patience to the limits, and am

Yours, respectfully,

CHARLES AULL, Warden.

At a regular meeting of the State Board of Prison Directors, held at Folsom Prison, May 5, 1888, there were present Directors Devlin, Sonntag, Scrivner, Luttrell, and DePue.

In response to invitations from his Excellency Governor Waterman, H. P. Livermore, Manager of the Folsom Water Power Company, submitted a proposition to renew the work upon the dam and canal of the Folsom Water Power Company, in conjunction with the State, said proposition dated San Francisco, May 3, 1888.

After the reading of the proposition, Director DePue moved that said proposition be rejected. The "ayes" and "noes" on this motion being demanded by Director Luttrell, were taken as follows: "Ayes," Devlin, Sonntag, Scrivner, Luttrell, and DePue. "Noes," none. Thereupon, upon motion of Director Scrivner, it was unanimously ordered that the Folsom Water Power Company be permitted to submit another proposition; whereupon, said Folsom Water Power Company, represented by H. P. Livermore, Manager of said company, submitted a written proposition, with certain documents annexed marked exhibits "A," "B," "C," and "No. 3," and made a part thereof, as follows, viz.:

FOLSOM PRISON, May 5, 1888.

Second proposition to the honorable Board of Directors of the State Prisons of the State of California:

WHEREAS, The Natoma Water and Mining Company, a corporation, did, by two general deeds, dated June 30, 1868, and June 3, 1874, duly convey to the State of California certain lands therein described, for the purpose of the erection of the present State Prison at Folsom, California, upon the terms and conditions therein expressed; and,

Whereas, The said State did, on the twenty-ninth day of January, 1878, enter into a certain other contract with one H. P. Livermore, for the purpose of giving employment to the prisoners confined in the State Prison at Folsom, all of which deeds and contracts now subsisting, valid and binding agreements by and between said parties and their successors in interest, copies of which are hereunto annexed, marked, respectively, exhibits "A," "B," and "C;" and,

Whereas, It appears from said contracts and other proceedings of the State and its officers and by all prior legislation on the subject, that it was and always has been the

desire and intention of the State and of its officers and agents, to aid in the construction of a dam and suitable canal or canals on the left bank of the American River, as aforesaid conveyed to the said State, and of thereby acquiring a valuable and permanent water power for the uses and purposes of the State; and.

Whereas, By reason of unforeseen obstacles beyond the control of the several parties to the said contract, they have been unable to execute and complete the same according to the original intent of said parties, particularly having been unable to build and construct said canal or canals, etc., as was originally contemplated; and,

Whereas, The said State did immediately upon the execution and delivery of said deeds take possession of the lands so conveyed, and ever since have, and does now, occupy and possess the same under grant of said deeds, but has not paid the consideration therein agreed to be paid for the same; and,

Whereas, The undersigned is now the owner by assignment of all rights and privileges conferred by said agreements, and each and all of them, and is now desirous of proceeding with the said work of construction to completion of said canal or canals under and pursuant to and by virtue of said agreements, and in execution and fulfillment thereof, in order that it may have and enjoy the consideration which is agreed to be paid to it or its grantors by said contracts; and,

Whereas, The said State has heretofore taken possession of, and does now occupy and possess many rights, privileges, and easements and properties belonging to the undersigned, without its consent and adversely to its interests, and all of which will more fully appear from map "Exhibit 3" and the accompanying report of H. T. Knight, reference to which is hereby specially made as a part hereof; and,

Whereas, The occupation of said last named rights, privileges, and properties by the said State is liable to result in various trouble and litigation, unless an adjustment thereof is amicably concluded; and now, therefore, in the condition of the premises, and for the purpose of carrying out said agreements, and to conclude an equitable adjustment of all the matters heretofore referred to, and all matters incidental thereto, the undersigned, the said Folsom Water Power Company, hereby submits to your honorable Board the following, viz.:

First—If the State will furnish the said company the labor necessary to construct the said dam, and the said canal along the lands of the said State described in said deed and pertaining to the said canal, down to the point known and described in the plans and specifications of said Knight as "Robbers' Ravine Mud Sink."

Second—The said dam shall be constructed in accordance with the plans and specifications heretofore made by the said Knight (which are filed herewith), reference to which is hereby made as a part hereof.

Third—The said canal shall be forty feet wide on the top, and thirty feet wide on the bottom; and a sufficient depth to carry water eight feet deep on a grade of one in ten thousand feet—and in accordance with the maps, plans, and specifications made by the said Engineer Knight (and filed herewith), reference to which is hereby made as a part hereof.

Fourth—The undersigned will, by proper contracts and conveyances, give to the State the exclusive and complete use of the power resulting from the first fall, which shall be seven and thirty-three hundredths feet fall, and the privilege of raising by pumps or other means from the canal whatever water may be deemed to be necessary for the use of the said Folsom Prison by the Warden of said prison, or other officer in charge thereof, or as such Warden or other officer may deem necessary or beneficial or useful in or about said prison, or any of the prison buildings, or in or upon any of the lands of the State, for irrigation or other purposes, and said preparation and use being in all cases carried by said Warden or other officer of said prison as to prevent wastage, as far as possible, and such preparation or use shall always be reasonable, useful, and economical, and nothing herein contained shall be so construed as to permit said Warden or other officer in charge of said prison to make any unnecessary, useless, or wasteful use or preparation of said water, and no such water shall be drawn from the canal by any officer of the State to be used outside or beyond the lands of the said State without the consent of the said undersigned.

Fifth—The said company shall, by proper conveyance, grant to the said State the privilege of maintenance in their present position, in so far as they do not require to be removed to allow the proper construction of its canal, all guard towers and other buildings and improvements which are now standing or located on any of the lands or premises of the said company.

Sixth—The said company will, by proper contracts, agree to maintain its present road from the town of Folsom to the said dam as now located, and give to the State free use thereof, but the said State shall, at its own cost, keep the same in repair.

Seventh—The said company shall furnish, at its own cost, all plans, surveys and specifications, and engineering details for the entire work, and in all respects the character and quality of material and the method of construction shall be under the exclusive supervision of the engineer placed in charge of the work by the company; but none of the employees of the said company shall, in any manner whatever, interfere with the absolute management and control of the said laborers engaged in the work of constructing the said dam and canal—it shall always be under the exclusive control of the employees of the said State.

Eighth—The plans and specifications herein filed and herein referred to, may be changed or modified from time to time, by and with the consent of the State, which shall be expressed by a resolution of the said Board of Directors of said State Prison,

duly entered on the records and by and with the written consent of the undersigned, but not otherwise.

(Signed:)

FOLSOM WATER POWER COMPANY,
Per HORATIO P. LIVERMORE, Manager.

Then follows "Exhibit A," deed from the Natoma Water and Mining Company to the State of California, dated the thirtieth day of June, A. D. 1868, in consideration of fifteen thousand dollars (\$15,000), payable in convict labor, rated at 50 cents per diem for each convict, making a grant of three hundred and fifty acres of land (a portion of the Rancho Rio de los Americanos), fully described, etc., duly verified by the proper officers of said company.

Then follows "Exhibit B," deed from the Natoma Water and Mining Company to the State of California, dated the third day of June, A. D. 1874, in consideration of fifteen thousand dollars (\$15,000), payable in convict labor at the rate of 50 cents per diem for each convict, granting one hundred and thirty-three and ninety-two one hundredths acres, more or less, being a portion of the Rancho Rio de los Americanos, duly verified by the proper officers of the said Natoma Water and Mining Company.

Then follows "Exhibit C," contract and bond, dated the twenty-ninth day of June, 1873, between William Irwin, Governor of the State of California, James A. Johnson, Lieutenant-Governor of said State, and Thomas Beck, Secretary of said State, constituting the Board of Prison Directors of said State, party of the first part, and H. G. Livermore, of the said State of California, party of the second part.

Said contract was made in pursuance of an Act of the Legislature entitled "An Act to provide for the completion of the Branch State Prison at Folsom," approved April 1, 1878, and provides that the said party of the second part, H. G. Livermore, shall, upon the completion of the said Branch Prison at Folsom, take from the State and employ three hundred and fifty convicts, daily, for a period of five years, for which the said party of the second part agrees to pay to the State a compensation of 50 cents per capita per diem; the said contract, made in pursuance of the said Act of the Legislature, was required by said Act to enter into the proper sureties before the money appropriated by said Act could be used for the completion of the said Branch Prison. The contract is duly signed by William Irwin, Governor, J. A. Johnson, Lieutenant-Governor, and Thomas Beck, Secretary of State, parties of the first part, and H. G. Livermore, party of the second part.

"Exhibit No. 3" consists of a map and plan of the proposed dam and canal, also showing the encroachments of the State upon the property of the Folsom Water Power Company, and extracts from the report of Engineer H. T. Knight to the Folsom Water Power Company as to the encroachments made on the property of the company by the works of the State Prison at Folsom, according to the survey made March 8, 1887.

Upon the reading of the foregoing proposition and exhibits, Director Scrivner offered the following resolution:

Resolved, That the second proposition of the Folsom Water Power Company, dated May 5, 1888, be accepted, and that the Warden of the State Prison at Folsom be and he hereby directed and instructed to proceed with all reasonable diligence to furnish the necessary labor to construct to completion the dam and canal mentioned in said proposition of said company from its dam on said American River down to a point known as Robbers' Ravine Mud Sink, on the line of said canal, pursuant to the contracts referred to in said proposition, and in accordance with the plans and specifications of the said

H. T. Knight, as they may be enlarged and revised and filed with said proposition, or they may hereafter, from time to time, be amended, with the consent of the respective parties; *provided*, said Water Power Company shall, within ten days from date, execute in due form a contract also this day submitted.

On the question of the adoption of this resolution, the "ayes" and "noes" being called for by Director Luttrell, the "ayes" were Directors Devlin, Sonntag, Scrivner, Luttrell, and De Pue; "noes," none. The resolution was then declared adopted. The Board then adjourned.

On the twelfth day of May following, and in pursuance of the proposition submitted by the Folsom Water Power Company, and accepted by the State Board of Prison Directors, the following contract was executed by the Folsom Water Power Company, and placed "in escrow" with S. G. Murphy, President of the First National Bank of San Francisco: Deed—The Folsom Water Power Company to the State of California, May 12, 1888. Filed May 21, 1888:

WHEREAS, The undersigned has this day submitted to the Board of Directors of the State Prisons of the State of California a certain proposition with reference to the completion of the dam and canal of the undersigned, situate on the American River, adjacent to the lands of the State of California, at the State Prison at Folsom, which said proposition has been duly accepted by said Board of Directors; and, whereas, by said proposition, the said undersigned promised and agreed to duly execute proper conveyance for certain rights, privileges, easements, immunities, and properties therein specified and referred to, reference to which said proposition now on file in the Clerk's office at the State Prison at Folsom, California, is hereby specifically made.

Now, therefore, for the purpose of fully carrying out said proposition on the part of the undersigned, and in consideration of the sum of one dollar, and of other good and valuable considerations, the receipt of which is hereby acknowledged, the undersigned, the Folsom Water Power Company, a corporation organized under the laws of the State of California (it being thereunto duly authorized by a resolution of its Board of Directors), does, by these presents, grant, assign, transfer, and convey unto the State of California and to its successors and assigns, all hereinafter described rights, privileges, easements, immunities, and properties, both real and personal, to wit:

First—The said State of California shall forever have the right to maintain the wall of the main prison yard of the Folsom Prison, as it now stands, on the line of the prison yard, a portion of the same being upon the lands of said party of the first part, together with the right to repair, reconstruct or improve the same from time to time as the Board of Directors or the Warden of said prison may deem advisable. And the said party of the first part hereby grants unto the party of the second part all the land situate on the inside of said wall; also, so much of the retaining wall running southerly from the southwest corner of the prison yard as will not interfere with the proper construction of the proposed canal.

Second—Also the right to maintain on the lands of the party of the first part a guard post, known as the westerly guard post, situate on the banks of the American River, opposite the gateway entering the main quarry of the prison, and on the outside of said canal; also the right to maintain such other guard stations on the lands of said party of the first part as may be deemed necessary for the proper protection of said prison, provided the same shall not in any way interfere with the construction or maintenance of said canal.

Third—Also the right to maintain on the lands of the said party of the first part freight warehouse for the use of said prison, at a suitable point contiguous to the railroad track, which shall not, however, interfere with the construction or maintenance of said canal.

Fourth—Also the right to lay and maintain sewers or sewer pipe beneath the bottom of said canal, leading from the prison to the American River, said sewer pipe to be constructed as to in nowise impair the said canal.

Fifth—And the said party of the first part agrees to maintain its present railroad running from the town of Folsom to the said prison, and permit the said State to use the same at all times at its pleasure, for all purposes and in any manner it may desire, free of cost, or any charge whatever, or without any cost to any one dealing with the State so far as the State has any beneficial interest therein, the said State to keep the same in repair at its own expense.

Sixth—Said State shall also have the right to construct and maintain across, along, and over the lands of said party of the first part such pipes and aqueducts as it may desire for the purpose of carrying water from the said American River to the said lands of the said State, and to any other buildings situate thereon; *provided*, the same shall be constructed and maintained as not to interfere with the said canal.

Seventh—The State shall have the right to take from the bed or banks of the American River all sand or gravel that may be required for use upon any of the said lands of said State, or in making any improvement, or in the construction of any buildings thereon.

Eighth—The State shall have the right to remove from the rock quarries of the State, on the lands of the State, all dirt or refuse rock, and carry or transport the same over the lands of the party of the first part by such means as may be most expedient, and deposit or dump the same on the outside of the canal, on the banks of the river, but not in any wise in so doing to interfere with said canal.

Ninth—The State shall have the perpetual right of ingress and egress to and from said prison over the lands of said party of the first part, along and upon such roads as may be necessary therefor, which said roads shall also be open to the use of the party of the first part, but shall be constructed and maintained and kept in repair by the said State; but the same shall be constructed and maintained at such points as will not impair the safety of said canal, nor interfere with the flow of water of said canal, nor otherwise impair the beneficial use of the property of said party of the first part; and, where it is necessary to cross said canal, good and substantial bridges shall be constructed and maintained by the State, spanning the water without obstructing its flow.

Tenth—The said State shall also have the right to construct at first fall, upon and about said canal and upon the lands and premises of the party of the first part adjacent thereto, if necessary, such waterwheels and structures for utilizing the power of said first fall as may be deemed necessary under the aforesaid plans of Engineer H. T. Knight, by said State, its officers, or agents, for the purpose of utilizing said water power in such manner and for such purposes as it or they may deem most expedient.

But all such utilization of the power of the first fall by the State shall be so devised and constructed as not to interfere in any respect with the onward, undiminished, and unretarded flow of the water through the continuation of said canal after said first fall.

Eleventh—The said party of the first part hereby grants to said State the exclusive and perpetual use of all power resulting from the first fall located opposite to or in the prison yard; such power to be used and appropriated by said State in any manner and for any purpose it may see fit connected with the State Prison, or other public works, or with any of the State lands or improvements at Folsom, together with the privilege of raising by pumps or other means from said canal at such first fall whatever water it may be deemed to be necessary for the use of said Folsom Prison by the Warden of said prison or other officer or officers in charge thereof; or whatever water such officer or officers may deem necessary or beneficial or useful in and about said prison, or any of the said prison buildings, or in or upon any of the lands of the State for irrigation or other purposes; such appropriations and use being in all cases so guarded by said Warden or other officer in charge of said prison as to prevent wastage, as far as possible, and such appropriation and use shall be reasonable, useful, and economical; but nothing herein contained shall be so construed as to permit such Warden, or other officers in charge of said prison, to make any unnecessary, useless, or wasteful use or appropriation of any such water; and no such water shall be drawn from said canal by any officer of the State to be conveyed or used outside or beyond the lands and improvements of said State without the consent of the said party of the first part.

Twelfth—The said State shall always have the right to enlarge said dam and canal so as to increase the power of said first fall at its own cost and expense; *provided* always that such increased flow of water be allowed to pass on from said first fall as hereinbefore provided; and *provided*, that such enlargement shall in nowise impair the permanence, stability, and reliability of said dam and canal.

Any enlargement of said dam made, as hereinbefore provided by the State, for the increase of its power at first fall, which shall by reason of overflow of back water, involve damage to land above said dam, or purchase thereof, shall be at the exclusive cost and expense of said State.

It is further agreed by said party of the first part that it will proceed without unnecessary delay with the work of constructing the dam and canal, in accordance with the said maps, plans, and specifications of H. T. Knight, as enlarged or revised (so as to give the fall and water supply hereinbefore stated), filed with said propositions, and will prosecute the same with reasonable diligence until the same is completed. That it will, at all times, furnish the materials, tools, implements, and machinery necessary to be used and consumed in the construction thereof, and in sufficient quantities, and as rapidly as may be required by the Warden of said State Prison to keep constantly employed, to the best advantage, such number of men as the said Warden may, from time to time, designate and place upon such work in fulfillment of the State's contract to furnish labor for the completion of said dam and canal of the party of the first part.

The neglect or failure of the party of the first part to faithfully keep all the executory provisions hereof shall render null and void all previous contracts and agreements on the part of the State with the assignors, or predecessors in interest, of said party of the first part, and referred to in said proposition; and said party of the first part shall also lose all rights hereunder; but the grants to the said State shall forever remain in full force and effect.

In witness whereof, and by virtue of authorization of a resolution thereto empowering, duly passed by the Board of Directors of the Folsom Water Power Company, the said company has caused these presents to be signed by its President and Secretary, and the corporate seal of the company to be affixed hereunto on this twelfth day of May, A. D. 1888.

THE FOLSOM WATER POWER COMPANY.

By CHARLES E. LIVERMORE, President.
HORATIO P. LIVERMORE, Secretary.

On the same date, to wit: May 12, 1888, the following "agreement of deposit in escrow" was entered into between the Board of Directors and the Folsom Water Power Company:

WHEREAS, The Folsom Water Power Company has, on this the twelfth (12th) day of May, A. D. 1888, made a certain conveyance to the State of California of various rights, privileges, easements, immunities, and properties connected with the State Prison at Folsom; and, whereas, the condition of said conveyance is (in accordance with proposals submitted to the honorable Board of State Prison Directors by the Folsom Water Power Company at Folsom Prison, on the fifth day of May, 1888, as more fully appears from the records of said Folsom Prison), that the Warden of said Folsom Prison shall furnish all the labor required to complete the construction of said company's dam; also, to complete the said company's canal down to the point designated in the surveys and plans of said canal as "Robbers' Ravine Mud Sink."

Now, therefore, it is hereby understood and agreed that the hereinbefore mentioned conveyance of the Folsom Water Power Company shall be placed in escrow in the hands of S. G. Murphy, President of the First National Bank of San Francisco, or his successor, to be by him held until the hereinbefore specified labor shall have been fully rendered and performed, thereby discharging the consideration due to the said company for such conveyance, then to be delivered to the Chairman of the Board of State Prison Directors.

(Signed by the President and Secretary of the Folsom Water Power Company and State Board of Prison Directors.)

Said contract or deed was deposited with S. G. Murphy upon the day mentioned, to be delivered to the State upon the completion of the said work.

The report of the Deputy Warden shows that two hundred and twelve convicts have been discharged, and three hundred and twenty-eight received during the year—an increase of one hundred and sixteen. As the San Quentin Prison held its own during the year, this number, one hundred and sixteen, represents the increase of the convict population of the State during that period. If this rate continues, it will not take long for the two State Prisons to be overcrowded with prisoners. However, the completion of the Preston School of Industry, at Ione, and the Whittier Reform School, will relieve the prisons of many youthful criminals, who should never have been sent to a State Prison to mingle indiscriminately with the older and more hardened.

As the limit of our cell and dining-room capacity has been reached, I would recommend that the ensuing Legislature make provisions for building cells in the east wing of the prison building, now unoccupied, and also for building additional dining-room and kitchen facilities.

The new wing will accommodate with cell-room four hundred convicts, which, added to the number now on hand, would make over one thousand prisoners. All of the best penological authorities agree that one thousand is the maximum that should be congregated in one prison. There are many reasons for this: the principal one is, that when you get above that number, it precludes the possibility of the Warden and officers knowing personally each convict, which is essential to any intelligent effort at discipline or reformation. The Warden must personally know the peculiar mental and physical characteristics of a prisoner, else he cannot exercise proper disciplinary or reformatory influences over him; and, except for the matter of economy, a much less number than one thousand would be preferable.

For kitchen and dining-room, economy dictates more spacious accommodations than we now have.

The percentage of waste (the key to extravagance in all large institutions) is much less where you have an abundance of room to prepare and properly handle the food. That you cannot do if the kitchen

cramped, and the range limited. The result is, badly cooked food that is not eaten, and goes to waste.

PHYSICIAN'S REPORT.

The report of Dr. T. B. Eagle will be found interesting and instructive. But three deaths occurred during the year, with an average of six hundred and twenty-three prisoners, which is a percentage of 4.81 in a thousand. A comparative statement of other prisons in the United States, taken from the various reports at hand, for the last two years, shows that the Folsom Prison is down to the minimum in point of mortality. This has been repeatedly shown by the reports of the last three years, and I trust that such expressions as "sending a convict to the Folsom Prison to die," may not be heard again in this State.

To the close attention given the sick by the physician, I attribute the surprisingly low rate of mortality.

In conclusion, I desire to thank your honorable Board for the many courtesies extended during the year.

The officers and guards have been unremitting in their devotion to the interests of the prison.

Their valuable assistance has materially lightened my labors, and assisted in maintaining good order among the prisoners.

Respectfully submitted.

CHARLES AULL,
Warden Folsom State Prison.

DEPUTY WARDEN'S REPORT.

STATE PRISON AT FOLSOM, CALIFORNIA, }
July 1, 1890. }

Hon. CHARLES AULL, Warden State Prison at Folsom:

DEAR SIR: I herewith beg to submit my report, in tabular form, for
the fiscal year ending June 30, 1890.

Very respectfully,

W. H. ROBINSON,
Deputy Warden.

TABLE No. 1.

PHYSICIAN'S REPORT.

MEDICAL DEPARTMENT,
FOLSOM STATE PRISON, July 1, 1890. }

Capt. CHAS. AULL, Warden:

SIR: It again becomes my duty to formally report to you the medical and sanitary condition of this institution for the fiscal year ending yesterday. The accompanying tables exhibit in detail all needful information as to the work of the department during the year.

The general health of the prisoners has been good, but this is largely due to the open-air labor in which they are engaged, and other conditions which serve to reduce to a minimum the liability to disease. It may be said, however, in this connection, as well as in explanation of the tabulated number of cases treated, that no case, however trivial, is refused attention, and this rule of the department must be credited with the staying of sickness and mortality in the institution. Even under the most healthful conditions, people will get sick, and while we are as powerless to prevent the ills of bondmen as others are those of freemen, we can by proper attention and intelligent treatment, though it may cost something in time, patience, and money to do so, keep our people alive and comparatively well.

During the months of January and February of the current year, the institution was visited by the then prevailing epidemic, "La Grippe." Its coming had been foreshadowed and provision made to meet it, and though the experience and its results, the like of which are unknown in the history, not only of this prison, but of that of every other institution of similar character with which we are acquainted, entailed so much labor and care upon the department, still I cannot help but feel proud of the success with which the dread scourge was combatted. The first cases were at once removed to the hospital and then promptly and efficiently treated. The germ had, however, taken fast hold, and by the twenty-fifth of January, as exhibited by the records of the department, over two hundred cases were under treatment, some sixty of which were very bad. There were about thirty-five of these who had previously been subject to bronchial and asthmatical affections, and these sank rapidly into an extremely low asthenic condition. This, coupled with the bad sewerage, the ill ventilated cells of the prison, and the depressive influence of the severe winter weather then prevailing, made me almost despair of saving some of them. But good care and careful nursing at last conquered, and not a single life was lost.

At this point I deem it instructive as well as interesting to invite attention to the following comparative "Table of Mortality," which I have made up from reports of the various penal institutions, as named:

COMPARATIVE TABLE OF MORTALITY—PENAL INSTITUTIONS.

Report showing Death Rate at Various Prisons during the Years 1887, 1888, and 1889.

NAME.	Daily Average of Prisoners.	Year.	Deaths.	Deaths per 1,000.

Western Penitentiary, Pennsylvania	686	1887	8	11.66
Western Penitentiary, Pennsylvania	664	1888	4	6.04

With reference to the sanitary condition of the prison, I desire to urge the crying necessity of overhauling the imperfect, patched up, broken, and totally inadequate sewer system now in use, and replacing it with one of new and improved construction, which shall be equal,

least, to the present and growing demands of the institution. The elimination of sewer gas and the mephitic vapors arising therefrom will never be accomplished until this is done. Some means should also be adopted for more perfectly ventilating the cells of the prison. A large proportion of the cases daily treated by me emanate from these two causes alone—defective sewerage and imperfect ventilation.

I desire to commend the thorough cleanliness with which the cell buildings, the dining-rooms, kitchen, bakery, and accessories are kept; and the universal tidiness and neatness that pervades all departments is gratifying indeed to a conscientious physician having the care and consideration of such a close community as this one is.

I desire to take issue with the effort that is being made in certain quarters tending to establish at this prison a "Sanitarium" or "Lying-in Asylum" for all the broken down phthisical criminals of the State. I will admit that the climate here is all that can be said of it, so far as its benefits are concerned to the consumptive, the rheumatic, and the syphilitic; but so long as the present sanitary conditions here obtain, and until our narrow and limited hospital accommodations are enlarged, it would be not only unwise and inhuman, but exceedingly detrimental to the interests and health of this institution, to foist upon it the burden and care of the bacillus-bearing criminal to propagate and spread disease and death in our little community. To treat tuberculosis successfully strict isolation must be resorted to, and the most stringent aseptie conditions observed in order to insure favorable results. How can we do this in our one small room with only six beds, which comprise our present hospital accommodations for six hundred and sixty-five men? Let the doctors, the lawyers, the committing magistrates, the Boards of Health, the police departments, and citizens and taxpayers of the State, generally, unite in securing us appropriations with which to provide right and proper accommodations, and we will then undertake to care for and administer to all that may be sent to us.

The supplies and stores furnished for the maintenance of the prisoners are, I find, of the best quality, but the means for properly preparing them for food are entirely incommensurate to the requirements. You cannot fitly make ready the bills of fare which you provide, and which is deemed so necessary to the proper nourishment and sustenance of our laborers in the heavy work of the quarry, canal, and ranch upon one small range, and in the stuffy, narrow quarters here denominated kitchen. Others and larger conveniences should be provided, not only for the welfare and health of the prisoners themselves, but for the saving and economy resulting therefrom to the State.

I should consider this report incomplete did I not call attention to the approaching necessity for additional cell room. While the needs of the present are provided for, the increment of the near future must be, in order that overcrowding be prevented, and safety and comfort and convenience be maintained.

Permit me to thank you for the able support you have given me during the past year, and for the prompt and generous attention paid to my requisitions for supplies. Let it not be forgotten that the State is here carrying on a vast physical enterprise, in which the forces of Nature and the science and arts of man are in daily conflict, entailing, in spite of every precaution and safeguard, disease, accident, and death. The

humane consideration with which you have so kindly seconded my efforts to cure the one, repair the other, and stay the last, is most heartily appreciated and herewith gratefully acknowledged by

Your obedient servant,

THOS. B. EAGLE,
Physician.

a CHARLEY DICK, No. 1885, an Indian, died December 1, 1889. Abscess formed and discharging when received at prison.

b HARRISON, No. 1595, died July 20, 1889; was a confirmed opium fiend.

c FLANNIGAN, No. 430, died September 29, 1889; was an old man sixty-seven years of age.

d MCCURDY, a one-armed man; shipped from ladder.

e REISLAND; injured by falling "grout box."

f STEIN; limb literally mashed; amputation deferred on account of weak condition of patient and because of slight chance of saving the limb. Owing to laceration of muscles and puncture wounds, caused by protruding bones, an improved fracture box was designed which admitted dressing without removal of splints. Careful aseptic conditions were observed, and a series of antiseptic dressings constantly applied. Under this treatment the wounds slowly healed, and on July fourth the patient made use of crutches for the first time, the uniting of the calices being firmly effected. Present indications are to a complete recovery and perfect use of limb.

g BALDERAMO, a Mexican, was bitten to the bone at the knuckle joint of the left index finger. The poison was prevented from spreading by heroic treatment with iodine and iron, and January sixth amputation was made, with success.

REPORT.

To his Excellency ROBERT W. WATERMAN, *Governor of the State of California:*

In compliance with the law, the Board of Trustees of the Napa State Asylum for the Insane respectfully submits a report of the financial and general condition of the institution for the two fiscal years ending with the thirtieth day of June, 1890. The Board also makes a number of recommendations concerning the future management and welfare of the asylum.

There was an undrawn balance in the deficiency appropriation for the fiscal year ending with June 30, 1889, of \$4,935 57. It will be seen by the Treasurer's report herewith submitted, that the fund for the improvement of gasworks, and the fund for the improvement of floors and hallways, have been expended for the purposes for which they were appropriated.

The last Legislature appropriated \$408,800 for maintenance for the two fiscal years ending with June 30, 1891. By the terms of this appropriation, only one half of this amount, the sum of \$204,400, was available to meet the expenses of the fiscal year which closed on the thirtieth of June last. The expense for maintenance for the last named year was \$194,971 81, leaving a balance undrawn, which is available for the current fiscal year, of \$9,428 19. Vouchers for all expenditures are on file in the office of the Treasurer, except those for the contingent fund, which are filed in the office of the Resident Physician.

The following statement shows the receipts and expenditures, on account of the contingent fund, for the two fiscal years ending June 30, 1890.

To balance June 30, 1888.....	\$2,617 75
To amount received for board	22,790 00
To amount received for Steward's sales.....	2,246 25
To amount received for sale of land	235 75
To amount received for rent of land	10 00
	\$27,899 75

Expenditures.

Painting	\$298 75
Books and papers	165 65
Hardware	174 82
Waterworks	475 25
Garden hose and reels	201 05
Repairs	38 25
Cartmen	1,060 00
Improvement of grounds.....	2,066 92
Blasting powder and fuse.....	339 16
Lumber	1,240 32
Water pipe and castings.....	1,176 82
Brick, lime, and cement.....	607 20
Interest	1,380 90
Rent of telephone	100 00
Returned to pay patients.....	240 00
Trees and shrubs	258 10
Pasturage	60 00
Carried forward	\$9,883 19

Brought forward.....	\$9,883 19
Inspection and insurance of boilers	285 00
Freight	93 70
Horses	570 00
Labor	521 00
Service of stallions	150 00
Rubber boots and coats	54 75
Sewer pipe	189 24
Gravel	30 00
Construction of cistern	467 00
Hire of team	48 00
Pig lead	26 15
Infirmaries foundations	3,439 11
Slate for roof of infirmaries	1,117 85
Hot house	722 91
Fencing	125 00
Laying flooring	392 00
Fire hose and reels	126 00
	<hr/> \$18,240 90
To balance June 30, 1890.....	\$9,658 85

The receipts for this fund for the two fiscal years ending with June 30, 1890, amounted to \$25,282, against \$23,353 58 for the two fiscal years ending June 30, 1888, showing an increase of \$1,928 42.

On the fifteenth of December, 1888, Dr. John W. Robertson tendered his resignation as Third Assistant Physician, which was subsequently accepted by the Board. During his term of service at the asylum, Dr. Robertson displayed a commendable interest in the department assigned him, and discharged the responsible duties of his office with marked ability and success.

By authority of an Act of the Legislature, approved March 19, 1889, at the stated meeting the following April the Board appointed Dr. Driesbach Smith, of Los Angeles, as Third Assistant Physician. Dr. Smith is a young man of flattering promise in the profession, and we are happy to say is faithfully and successfully performing the important duties of his office. He receives as a compensation for his services \$125 per month.

At the regular meeting of the Board in October, 1889, after ten years of most faithful and efficient service, Dr. Frederick W. Hatch tendered his resignation of the office of Second Assistant Physician. The Board accepted his resignation with a measure of sorrow and regret, that was only mitigated by the assurance that he was about to enter a broader field of usefulness to the State, by promotion to the position of Medical Superintendent of the State Insane Asylum at Agnews.

At the monthly meeting in February, 1890, Dr. Alden M. Gardner, of Calistoga, was elected to fill the vacancy in the office of Second Assistant Physician. It gives us much pleasure to state that Dr. Gardner fills the office with a zeal, skill, and ability that proves him worthy to succeed his accomplished predecessor.

By authority of a law passed by the last Legislature, on the fourteenth of August, 1889, the Board, in consideration of the payment of \$35 75, sold to the County of Napa, for a public highway, a strip of land across the northeast corner of the asylum premises, containing an area of one and forty-seven hundredths acres.

Under the same law, the Board also sold to James Kennedy the piece of land thereby detached, embracing an area of eight acres, for \$200.

In adjusting the boundary between the asylum estate and land owned by Patrick Golden, on the line of a stone fence belonging to the asylum

Golden conveyed by gift deed to the State a narrow strip of land containing one acre.

The total area of all lands belonging to the asylum estate is one thousand one hundred and fifty-eight and nineteen-twentieths acres.

Inspired by the broad spirit of an enlightened charity that reflects the highest honor upon the State, the last Legislature made the requisite appropriation of \$28,000 for building and furnishing the long-sought infirmaries, so urgently necessary for the relief of a class of pitiful sufferers committed to our charge. The two infirmaries, one for each sex, are already completed, and within a few weeks will be furnished and occupied.

Since our last biennial report a number of important, desirable improvements have been made. Maple floors have been laid in nine more wards, making in all twenty-one, which leaves only ten in the building with pine floors. These are wearing out and should soon be replaced with maple.

A cistern, with a capacity of ninety thousand gallons, has been constructed for storing the night drainage of the asylum, that it may be distributed in the daytime for irrigating and fertilizing purposes. Besides other improvements, another reservoir, large enough to hold twenty million gallons, is being built. The capacity of the four reservoirs is now more than forty million gallons, and, when completed, will be ample for the storage of fifty million gallons of water.

Accompanying this communication as a part thereof, is the usual interesting, instructive report of Dr. E. T. Wilkins, the Resident Physician. His report gives a complete account of all important matters pertaining to the institution for the two fiscal years just closed, and makes many practicable recommendations for the future management of asylum affairs.

During the fiscal year ending June 30, 1889, one hundred and seventy-seven patients were transferred from this asylum to the State Insane Asylum at Agnews. Number of patients in the asylum June 30, 1890, was one thousand three hundred and forty-four. The daily per capita cost for the fiscal year ending with June 30, 1889, was 41 cents; for the last fiscal year it was 40 cents. The appropriations asked by the Resident Physician for maintenance, for repairs and painting, and for building and furnishing a kitchen adequate to the wants of the asylum, are imperative necessities, and received the earnest indorsement of every member of the Board.

Respectfully submitted.

BENJAMIN SHURTLEFF,
J. C. MARTIN,
J. Q. BROWN,
J. F. LAMDIN,
G. M. FRANCIS,

Trustees.

AUGUST 25, 1890.

TREASURER'S REPORT.

To the honorable Board of Trustees of the Napa State Asylum for the Insane

GENTLEMEN: I herewith present my report as Treasurer of said asylum for the fiscal years ending June 30, 1889, and June 30, 1890, on account of maintenance, the construction of infirmaries, improvements in floors and hallways, and enlargement of gasworks. Vouchers are in my office for all moneys paid out:

THE TREASURER IN ACCOUNT WITH MAINTENANCE FUND FOR THE FISCAL YEAR ENDING JUNE 30, 1889.

<i>Receipts.</i>	
Balance on hand per last report	\$169 98
Received from the State for May, 1888 (deficit)	4,665 71
Received from the State for June, 1888 (deficit)	15,903 76
Received from the State for July, 1888	16,824 56
Received from the State for August, 1888	16,101 78
Received from the State for September, 1888	17,179 46
Received from the State for October, 1888	16,790 62
Received from the State for November, 1888	19,435 23
Received from the State for December, 1888	19,224 68
Received from the State for January, 1889	20,066 33
Received from the State for February, 1889	18,417 73
Received from the State for March, 1889	16,851 71
Received from the State for April, 1889	16,516 84
Received from the State for May, 1889	15,057 57
Received from the State for June, 1889	17,597 90
Total receipts	\$230,808 86
<i>Expenditures.</i>	
Paid out on orders of the Board of Trustees	223,358 26
Balance on hand	\$7,450 60

THE TREASURER IN ACCOUNT WITH MAINTENANCE FUND FOR THE FISCAL YEAR ENDING JUNE 30, 1890.

Respectfully submitted.

C. B. SEELEY,
Treasurer.

NAPA, August 13, 1890.

REPORT OF THE RESIDENT PHYSICIAN.

To the honorable Board of Trustees of the Napa State Asylum for the Insane

GENTLEMEN: Since the date of your last biennial report the flight of time has left two more years behind, of which, as Trustees of this asylum you have yet to render an account of your stewardship.

ANNUAL SUMMARY.

The following table from my fourteenth annual report, shows the movement of patients for the fiscal year ending June 30, 1889:

FROM JUNE 30, 1888, TO JUNE 30, 1889.

	Males.	Females.	Total.
Number of patients June 30, 1888.....	884	585	1,469
Number admitted during the year.....	253	148	401
Number returned escapes.....	2	1	3
Number under care and treatment.....	1,139	734	1,873
Number discharged, recovered.....	79	35	114
Number discharged, improved.....	37	41	78
Number discharged, unimproved.....	4	2	6
Number discharged, not insane.....	7	4	11
Number died.....	105	33	138
Number removed to Agnews.....	116	61	177
Discharged, died, and removed.....	348	176	524
Number remaining June 30, 1889.....	791	558	1,349

From this table you perceive, for the first time in the history of this asylum, a material decrease in the number of patients during the year. As you are aware, this result is due to the opening of the asylum at Agnews, in Santa Clara County, to which were transferred during the months of October, 1888, and February, 1889, one hundred and seventy-seven patients—one hundred and sixteen men and sixty-one women—leaving upon our books, June 30, 1889, one thousand three hundred and forty-nine patients.

From these facts, we had a right to conclude that with the discharges and deaths, there would be a perceptible decrease in numbers until the proper capacity of this asylum was attained. In this cherished hope, however, we have been disappointed, as will be seen from the following table, showing the movement of patients for the year ending June 30, 1890:

FROM JUNE 30, 1889, TO JUNE 30, 1890.

	Males.	Females.	Total.
Number of patients June 30, 1889.....	791	558	1,349
Number admitted during the year.....	190	106	296
Number under care and treatment.....	981	664	1,645
Number discharged, recovered.....	84	22	106
Number discharged, improved.....	34	35	69
Number discharged, unimproved.....	1	6	7
Number discharged, not insane.....	5	3	8
Number died.....	77	26	103
Number eloped.....	3	—	3
Number removed to Agnews.....	2	3	5
Discharged, died, and eloped.....	206	95	301
Number remaining June 30, 1890.....	775	569	1,344

While the above table shows the smallest number of commitments ever made to this asylum (two hundred and ninety-six), it also shows that the discharges and deaths were less. Hence, the number remaining at the end of the last fiscal year (one thousand three hundred and forty-four) was only five less than at the beginning of the year. This is due to the fact that a large portion of our patients have been inmates for years; many have become chronic, and the percentage of recoveries among them will become less, year by year.

COUNTIES.

Table No. 1 shows that patients were received during the year from thirty counties. San Francisco sent us one hundred and thirty-one. The northern coast counties, including Marin, Sonoma, Mendocino, Humboldt, and Del Norte, thirty-two. The southern counties, Santa Barbara, Ventura, San Diego, Los Angeles, and San Bernardino, thirty-six; and from the remaining nineteen counties, ninety-seven.

NATIVITY.

Table No. 2 shows that the two hundred and ninety-six patients admitted are the representatives of twenty-seven States and twenty-eight foreign countries, divided as follows: United States, one hundred and forty-eight; foreign countries, one hundred and forty; unknown, eight. This also breaks the record, since it is the first time that a greater number of Americans than foreign born have been committed to this asylum.

AGES.

Table No. 3 shows the ages of those committed during the year to range from ten to seventy years, and sustains the fact, that more persons are deprived of their reason between the ages of thirty and forty, than any other period of life, and that the susceptibility to insanity diminishes as you go up or down the line. Yet any age has its liability.

CAUSES.

This is the most unsatisfactory, uncertain, and difficult question with which we have to deal in connection with this mysterious, dangerous and distressing disease. The manifestation is very often, nay, generally assigned as the cause of mental derangement, when in reality it is only the effect of the real cause. Heredity, for instance, is not very often assigned as the cause, when in fact we know it is the cause in many cases. The same may be said of alcohol, which, though one of the leading assigned causes, is also the most prolific of all causes in dethroning the reason. Many cases of ill health, domestic infelicity, immoral and vicious habits, and crime have their origin in the use of stimulants, whether whisky, beer, wine, or any other form of alcohol, which, taken immoderately, lead to insanity, either primarily or remotely.

Now, while we know that stimulants have been used from the earliest period of recorded time, and believe it will be to the end of time, we are also satisfied that a bridle can be put upon it by wise municipal regulations and a conservative public opinion.

Prohibition may be, probably is not possible, but high license, very high license, is within the reach of every community, and by this means the low dens, pitfalls, and the sale of stimulants at corner groceries can be stopped, and the evil consequences originating through them greatly ameliorated, to say the least. That the power of the press, aided by honest dealers, wise ordinances, public opinion, and faithful officers, can do much to mitigate the evil and pernicious practices, is in a measure proven by our records.

During the fiscal year ending June 30, 1889, seventeen men and one woman were committed to this asylum who had been addicted to the opium habit. One of the leading daily papers of the City of San Francisco, in several able articles, made a vigorous attack, not only on those who were indulging in this seductive habit, but also upon those who were selling the drug, and, being aided by other papers, so directed public attention to its untold evils that the commitments grew less and less, until they almost ceased. The year ending June 30, 1890, shows that only two men and one woman were sent to us from this cause. Comment is unnecessary.

RECOVERIES AND DEATHS.

The percentage of recoveries was 35.81, and of deaths 6.26, both most favorable under the circumstances. The principal causes of death were organic disease of the brain, consumption, paralysis, and epilepsy, as has always been the case in this asylum.

ESCAPES.

The elopements were few indeed, considering the large number who go out on the grounds, and the liberty allowed them. Indeed, it seems that the disposition to escape diminishes with the freedom granted.

STEWARD'S REPORT.

I respectfully refer you to the report of the Steward, J. M. Palmer, for a clear and itemized account of the purchases, disbursements, and

per capita cost of maintenance. Also, for the products of the farm, garden, dairy, orchard, and vineyard. The continued rains of last winter have been more or less disastrous in some departments. The hay and fruit crops have been diminished at least 50 per cent, while about 4 per cent of the fruit trees have died from the effects of the long wet season. This scarcity of fruits deprives our patients and employes of much pleasure and satisfaction that they have heretofore enjoyed; but half a crop is better than none, and with it we must be satisfied.

PER CAPITA COST.

From Table No. 3 of the Steward's report you will observe that the per capita cost of maintenance for the year was 41 cents, nearly 1 cent higher than that of the previous year. It only shows that the strictest economy is still practiced in the administration of this asylum.

IMPROVEMENTS.

The most important improvements made during the year are the two infirmaries, the construction of which we have so long desired and so perseveringly sought to obtain. For ten long years we have urged upon each succeeding Legislature the urgent necessity of having these adjuncts to our asylum, that we might be enabled to take better care of a certain class of our patients—the sick and feeble, who require special diet, special attention, and that quiet and freedom from noise which could not be obtained in an ordinary ward.

The last Legislature made an appropriation of \$28,000 to build and furnish these infirmaries, and they are now nearly completed and ready for the furniture. They will comfortably accommodate twenty-five patients each, and by crowding, thirty. Copeland & Pierce, of San Francisco, were the architects, and Corlett & Sons, of Napa, the contractors. The buildings are one-story, and contain eight rooms and two dormitories each, including sitting-room, attendant's-room, kitchen and dining-room; with closets, bath-room, and clothes-room added. The sitting-room, dormitories, and dining-room are to be warmed by open fires, protected by strong screens, which gives them a comfortable and home-like appearance; and if these are found inadequate, other means can be added at small cost. They are built upon stone foundations, three feet above ground, and have a gallery in front. Of course, they will add somewhat to the per capita cost of maintenance, but the benefits to be derived will, in my opinion, more than justify the outlay. They will be occupied sometime in September next.

CISTERN.

The cistern, constructed in the garden, west of the county road, with a capacity of ninety thousand gallons, was for the purpose of securing the water that passed through the asylum at night, that it might be used for irrigating purposes on the lands below, instead of running off into tide water. With its use we are enabled to have green meadows at all seasons of the year.

RESERVOIRS.

The construction of another reservoir has been undertaken since your last report, and will add several million gallons to our present supply next season; and when completed, its capacity will be twenty million gallons. It will not only be the most elevated, but most beautiful of the group, and is known as Lake Como. It can be discharged either into Lake Camilla or Lucerne, and if need be, by a separate system of pipes to irrigate lands that cannot be reached by either of the other reservoirs. The great object in view in the construction of these reservoirs, notwithstanding we have an abundant supply for the lawns and flowers, is to increase the quantity of alfalfa for our dairy cows. Good pure milk is among the best articles of food that can be given to the sick; while all are fond of it. And this we cannot have in great abundance without green feed for the cows the whole year.

NEW FLOORS.

New maple floors have been recently laid in five additional wards. There are still ten wards which will require new floors, and I trust we will be able to reach them ere another report will be made.

Material has been purchased for the construction of a stable and hay barn at the ranch, forty by twenty-four feet in size; and a building of like dimensions for the storage of straw for bedding. They will soon be completed and ready for use.

APPROPRIATIONS NEEDED.

In addition to the appropriation for maintenance, which, in my judgment, should not be less than that of two years ago, since we begin the present year with one thousand three hundred and forty-four patients, and cannot expect much relief until one of the asylums provided for by the last Legislature shall be ready for their reception. That in the southern district being far removed from any asylum, should be pushed to completion with all the vigor possible, to avoid the fatigue, danger, and expense involved in transporting insane persons to such a distance, as is now necessary.

NEW KITCHEN AND DINING-ROOM.

The kitchen now in use for this asylum was intended to do the cooking for five hundred patients; but since the population has increased almost three-fold, and will never be less than one thousand two hundred, it is too small to accomplish the work properly. In addition to this objection, it is poorly ventilated, and the odors emanating from it permeate every portion of the executive building, as well as the wards above it.

I submit for your consideration plans for this improvement, drawn at my request by Corlett & Sons, of Napa. It will be one-story, ventilated through the roof, which is to be constructed for the purpose. A dining-room for female attendants will be under the same roof. Also a meat house, which is greatly needed for the preservation of our meats. A scullery and pantry are also provided for. Its cost will be about

\$14,000, besides the furniture, most of which will have to be new, as that in the old kitchen has been in use fifteen years, and must be removed in any event.

Should this improvement be made, the old kitchen can be advantageously fitted up, and used as an associate dining-room for quiet patients. This would vacate a few of the ward dining-rooms, which would, to that extent, relieve the pressure on the wards.

REPAIRS.

Under this head much is needed which cannot be delayed without serious injury to the property under your care.

The galvanized cornice of the entire building needs repairing and repainting. The conducting pipes from the gutters are fast giving out, being made of tin, and should be replaced with iron pipe. Two of the boilers were repaired during the year at a cost of \$750, and two more are liable to give out at any time, as they have been in constant use for fifteen years. Indeed, any building fifteen years old must need constant attention, or it will deteriorate; \$5,000 per annum will probably be required on this account.

RESIGNATIONS AND APPOINTMENTS.

On the fifteenth of November, 1888, Dr. John W. Robertson resigned his position as Third Assistant Physician, for the purpose of engaging in private practice in San Francisco. Having, in a previous report, expressed my appreciation of his accomplishments as a physician, and qualities as a man, it is only necessary for me to express the gratification it affords me to state that he is meeting with success in his practice; surely he has my best wishes.

Dr. Driesbach Smith, an intelligent young physician of Los Angeles, was appointed to succeed Dr. Robertson, in April, 1889. And it affords me pleasure to say that he fills the position most acceptably. He not only performs the duties assigned him with a cheerful and accommodating spirit, but evinces a decided interest in the welfare and success of the institution.

In my opinion it would be greatly to the interest of the asylums of this State if the Boards of Managers were invested with authority to employ one or two promising young graduates of medicine (when deemed necessary), to act as internes each year. A moderate salary would be all that could be required, as the information gained by a year of asylum practice would be of great value to them and a benefit to the asylums.

After more than ten years of active and most efficient service as Second Assistant Physician to this asylum, Dr. F. W. Hatch severed his connection with us to take charge of the Asylum for the Insane at Agnews, in Santa Clara County, on the first of December, 1889. Dr. Hatch had so endeared himself to the officers, employes, and patients of this institution, by a rare combination of admirable qualities, whether in the line of his profession, the active, energetic effort to perfect the organization of the asylum, his affable, agreeable manner and sympathetic nature, that we all felt as if a member of the family had left us, and all knew that we had lost from among us a valued and steadfast friend. Our consolation is, that his valuable services and ripe experi-

ence are not lost to the specialty or the State, since his promotion to a more responsible position and broader field will enable him to make an enviable reputation for himself, by faithful service to the commonwealth and best treatment of the unfortunates committed to his care.

As all physicians connected with asylums for the insane should possess certain special characteristics and qualifications, not absolutely necessary in ordinary practice, together with a taste for the treatment of mental diseases, the Board of Trustees acted wisely in deferring the election of a physician to fill the position made vacant by the resignation of Dr. Hatch, until a man could be found endowed with all the qualifications deemed necessary to fill the position.

Being satisfied on these points, Dr. A. M. Gardner was duly elected at the regular meeting of the Board in February last, to assume the duties of his office on the first of March, 1890. Dr. Gardner has been practicing medicine and surgery for thirteen years in this county, and had already attained a widespread reputation for ability and skill in his profession; and I am pleased to say that he has entirely fulfilled the promise of our expectations here. His studious habits are constantly adding to his store of knowledge, and his desire to progress in the science of psychiatry gives promise of good results in the future.

CONFERENCE OF ASYLUM MANAGERS.

On the fifteenth of July of the present year, the Superintendents and Boards of Managers of the asylums for the insane, met by agreement to consider and discuss all matters that might be of interest or prove a benefit to the institutions under their care. Dr. H. N. Rucker, Medical Superintendent, and Doctors Young, Phillips, and Hoisholt, Assistant Physicians, of the Stockton Asylum; Dr. E. T. Wilkins, Resident Physician, and Dr. A. M. Gardner, Assistant Physician, of the Napa Asylum; Dr. F. W. Hatch, Medical Director of the Agnews Asylum; Directors Harvey, Dorrance, Johnson, and Thornton, of the Stockton Asylum; Dr. Benjamin Shurtleff and Mr. J. F. Lamdin, Trustees of the Napa Asylum; B. D. Murphy, President of the Board of Trustees of the Asylum at Agnews; Mr. Drew, President of the Board of Trustees of the San Bernardino Asylum, and Mr. Curlett, architect, were present. Dr. G. A. Shurtleff, the honored ex-Superintendent of the Stockton Asylum, was elected an honorary member, and took his seat in the association.

Dr. E. T. Wilkins was elected President, and Dr. F. W. Hatch Secretary. The Association of Superintendents and Boards of Managers of California Hospitals for the Insane was the name of the organization. Various matters of interest were discussed by the association, and committees appointed to report at the next annual meeting.

Committees were appointed as follows:

On Revising Commitments: Wilkins, Rucker, and Hatch.
On Revision of Statutes: Murphy, Harvey, and B. Shurtleff.
On Post Mortems: Gardner, Pratt, and Hoisholt.
On Advertising and Supplies: Watt, Murphy, and Shurtleff.

After favorably discussing the necessity for completing the asylum for the criminal insane at San Quentin, the importance of establishing training schools for nurses at all of the asylums, and the deportation of insane Mongols, the Association adjourned to meet at Napa, July 15, 1891.

OBLIGATIONS.

A few books, periodicals, and papers have been presented by friends for the use of our patients, for which we return our thanks. But in addition to these, I am impressed with the importance of procuring some pictures and cheap musical instruments, to be placed in the wards, for the diversion of the minds and the amusement of the patients.

As year after year passes away, the continued kindness and support of the Board of Trustees places me under additional obligations to its members, for which I again express my grateful thanks.

Respectfully,

E. T. WILKINS,
Resident Physician.

AUGUST 9, 1890.

APPENDIX.

APPENDICES.

NUMBER OF ADMISSIONS, RECOVERIES, DEATHS, ETC.

The following table exhibits the number of admissions, recoveries, discharges, deaths, elopements, number resident at the close of each year, the increase or decrease for each year, whole number treated each year, and in the aggregate; also, the ratio of recoveries and deaths each year, and for the whole time, from November 15, 1875, to July 1, 1890:

YEARS.	Admissions	Recoveries	Discharges, Uncured	Removed to Asylums	Deaths	Returned Escapes	Escapes	Number Resident at Close of Each Year	Increase	Decrease	Whole Number Treated	Per Cent of Recoveries to Admissions	Per Cent of Deaths on Number Treated
Nov. 15, 1875, to July 1, 1876	321	69	20	20	...	4	208	208	321	21.49	6.23
July 1, 1876, to July 1, 1877	451	140	71	49	...	4	395	187	650	31.04	7.43
July 1, 1877, to July 1, 1878	493	148	71	70	...	11	528	133	828	34.11	8.45
July 1, 1878, to July 1, 1879	615	184	133	104	...	8	714	186	1,143	29.91	8.22
July 1, 1879, to July 1, 1880	572	189	163	91	...	4	839	125	1,286	31.29	7.08
July 1, 1880, to July 1, 1881	563	133	122	124	...	2	1,021	182	1,402	23.62	8.84
July 1, 1881, to July 1, 1882	543	125	161	107	1,172	151	1,564	23.02	6.84
July 1, 1882, to July 1, 1883	463	127	174	112	...	3	1,219	47	1,635	27.43	6.85
July 1, 1883, to July 1, 1884	500	130	177	90	...	3	1,319	100	1,719	26.00	5.24
July 1, 1884, to July 1, 1885	479	119	155	110	...	5	1,409	90	1,798	24.84	6.12
July 1, 1885, to July 1, 1886	346	80	121	113	...	5	1,436	27	1,755	23.12	6.43
July 1, 1886, to July 1, 1887	363	95	146	98	...	6	1,454	18	1,799	26.17	5.53
July 1, 1887, to July 1, 1888	355	86	126	117	...	11	1,469	15	1,809	24.22	6.47
July 1, 1888, to July 1, 1889	401	114	95	177	138	3	...	1,349	120	1,873	28.17	6.94

TABLE IV.

Showing the supposed causes of insanity in two hundred and ninety-six patients, as stated in commitments, from July 1, 1889, to July 1, 1890.

SUPPOSED CAUSES.	Males.	Females.	Total.
Business trouble	5	2	7
Change of life		5	5
Child birth		5	5
Death of relatives		3	3
Disappointment in love	1	1	2
Domestic trouble	4	4	8
Epilepsy	5	3	8
Hereditary	13	5	18
Ill health		2	2
Injury to head	9		9
Intemperance	16	6	22
Masturbation	17	1	18
Over study		1	1
Paralysis		1	1
Religion	2	3	5
Spiritualism	2	1	3
Sunstroke	4		4
Suppressed menstruation		3	3
Syphilis	2	2	4
Unknown	108	52	160
Use of opium	2	1	3
Uterine trouble		5	5
Totals	190	106	296

TABLE V.

Showing the class of insanity of two hundred and ninety-six patients, as stated in commitments, from July 1, 1889, to July 1, 1890.

CLASS.	Males.	Females.	Total.
Dementia	23	4	27
Mania	93	56	149
Melancholia	16	12	28
Monomania	7	2	9
Puerperal mania		3	3
Senile dementia	2	1	3
Unknown	49	28	77
Totals	190	106	296

TABLE VI.

Showing the civil condition of two hundred and ninety-six patients admitted from July 1, 1889, to July 1, 1890.

CIVIL CONDITION.	Males.	Females.	Total.
Divorced	2	5	7
Married	41	66	107
Single	123	24	147
Unknown	23	1	24
Widows		10	10
Widowers	1		1
Totals	190	106	296

TABLE VII.

Showing the occupation of two hundred and ninety-six patients admitted from July 1, 1889, to July 1, 1890.

OCCUPATION.	Males.	Females.	Total.
Agents	2		2
Architects	1		1
Artists	1		1
Bakers	1		1
Barkeepers	3		3
Butchers	3		3
Carpenters	9		9
Clerks	5		5
Cooks	1		1
Coopers		5	5
Domestics	3		3
Engineers	21	1	22
Farmers	1		1
Gardeners	2		2
Harnessmakers	4		4
Hotel keepers		73	73
Housewives	72		72
Laborers	1		1
Laundrymen	1		1
Machinists	2		2
Merchants	1		1
Miners	14	17	31
No occupation	7		7
Painters	2		2
Plasterers	2		2
Plumbers	5		5
Sailors		4	4
Seamstresses	4	2	6
Servants	1		1
Shoemakers	1		1
Stone cutters		1	1
Students	1		1
Tailors		1	1
Teachers	14	2	16
Unknown	2		2
Upholsterers			
Totals	190	106	296

TABLE VIII.

Showing the cause of death of one hundred and three patients, from July 1, 1889, to July 1, 1890.

MONTH.	Cause of Death.	Nativity.	Age.	Male	Female
July, 1889	Exhaustion	Ireland	60		1

TABLE IX.

Recapitulation of the causes of death of one hundred and three patients, from July 1, 1889, to July 1, 1890.

CAUSE OF DEATH.	Males.	Females.	Total.
Consumption.	17	4	21
Epilepsy.	4	2	6
Exhaustion.	11	9	20
General paralysis.	2	1	3
Old age.	1		1
Organic disease of brain.	24	3	27
Paralysis.	6	1	7
All other causes.	12	6	18
Totals.	77	26	103

STATEMENT

Showing the number of articles made in the sewing-room, from July 1, 1889, to July 1, 1890.

ARTICLES.	Number.
Aprons.	979
Bath towels.	190
Bed ticks.	94
Brown sheets.	2,388
Carpet mats.	4
Camisoles.	20
Chemise.	582
Cotton flannel shirts.	418
Counterpanes.	241
Drawers.	502
Dresses.	400
Flannel skirts.	337
Linen table cloths.	63
Mattress ticks.	119
Nightgowns.	268
Pillow slips (check).	606
Pillow slips (white).	764
Pillow ticks.	66
Roller towels.	486
Sacques.	27
Shirts.	148
Shrouds.	61
Skirts.	23
Suspenders.	24
Sun bonnets.	150
Waterproof capes.	45
White sheets.	100

STEWARD'S REPORT.

TABLE FIRST.

Amount of articles purchased and consumed, and other expenses, for the fiscal year ending June 30, 1890.

ARTICLES.	Value.
Flour.....	\$8,838 06
Meat.....	25,772 06
Sugar.....	3,623 09
Tea.....	1,223 87
Syrup.....	1,205 31
Potatoes.....	2,572 00
Butter.....	6,968 69
Coffee and chicory.....	3,483 30
Lard.....	113 40
Fish.....	643 06
Poultry and eggs.....	3,972 35
Beans.....	791 02
Rice and cracked wheat.....	1,267 40
Cornmeal and oatmeal.....	986 77
Fruit.....	429 24
Salt.....	153 47
Vinegar and pickles.....	213 58
Small groceries.....	1,033 07
Soap.....	1,202 54
Drugs.....	1,474 97
Liquor and ale.....	361 12
Tobacco.....	1,037 07
Dry goods.....	3,887 77
Clothing and hats.....	3,907 59
Shoes and leather.....	1,892 72
Blankets.....	1,454 00
Furniture and crockery.....	832 98
Hardware and tinware.....	928 00
Spoons and cutlery.....	117 30
Carpeting.....	462 06
Grain and feed.....	1,154 64
Garden tools and seed.....	267 94
Lumber.....	1,344 63
Repairs.....	902 81
Brooms and brushes.....	529 60
Books and stationery.....	83 25
Gas.....	2,358 37
Paints, oil, and glass.....	899 36
Fuel.....	15,332 87
Bedding.....	473 06
Castings, pipe, and iron.....	844 15

Returned escapes.....	34 00
Discharged patients.....	417 40
Trustees' services and mileage.....	687 59
Telegraphing and telephoning.....	110 79
Postage, freight, and expressage.....	375 61
Ice.....	49 33
Advertising.....	275 00
Straw.....	287 36
Wagon.....	112 50
Hose cart and hose.....	390 00
Hereford bull.....	100 00
Repairing boilers, tanks, etc.....	908 72
Gas retorts, brick, clay, etc.....	587 59
Miscellaneous.....	1,450 38
Total.....	\$196,312 06

TABLE SECOND.

Showing the cost of the different departments for the fiscal year ending June 30, 1890.

DEPARTMENTS.	Cost.
Kitchen and dining-rooms.....	\$53,944 69
Wards.....	14,800 04
Bakery.....	9,063 54
Laundry.....	670 57
Engine-room.....	256 89
Farm, garden, dairy, and stable.....	1,960 86
Trustees' salaries and mileage.....	687 50
Repairs.....	5,920 38
Drug store.....	1,574 75
Center building.....	928 95
Office.....	610 82
Payroll.....	85,491 55
Returned escapes.....	34 00
Discharged patients.....	417 40
Fuel.....	15,228 44
Gas.....	2,358 87
Coombs ranch.....	215 05
Tin shop.....	300 69
Blacksmith shop.....	331 86
Night watch.....	45 08
Advertising.....	275 00
Miscellaneous.....	1,195 15
Total.....	\$196,312 08

TABLE THIRD.

Averages for the fiscal year ending June 30, 1890.

MONTHS.	Average Number of Patients Daily.....	Average Daily Expenses.....	Average Cost per Capita per Day.....	Average Cost per Capita per Month.....
1889—July.....	1,350	\$522 95	\$0 38.7 ¹⁰ / ₁₀₀	\$12 00
August.....	1,353	495 84	36.8 ¹⁰ / ₁₀₀	11 34
September.....	1,354	523 76	38.7 ¹⁰ / ₁₀₀	11 61
October.....	1,348	511 46	37.9 ¹⁰ / ₁₀₀	11 75

April.....	1,335	542 18	40.9 ¹⁰ / ₁₀₀	12 10
May.....	1,339	520 96	38.9 ¹⁰ / ₁₀₀	12 06
June.....	1,344	562 72	41.7 ¹⁰ / ₁₀₀	12 33
Yearly averages.....	1,341	\$538 12	\$0 40	\$12 17

TABLE FOURTH.

Products of the farm, garden, and dairy for the fiscal year ending June 30, 1890.

ARTICLES.	Amount.
Asparagus, pounds.....	283
Apples, pounds.....	34,000
Apricots, pounds.....	500
Blackberries, pounds.....	783
Beets (table), pounds.....	311
Beets (cow), pounds.....	50,255
Beans, pounds.....	1,107
Cabbage, pounds.....	46,191
Cauliflower, pounds.....	587
Carrots, pounds.....	10,646
Cherries, pounds.....	2,870
Currants, pounds.....	320
Corn (green), dozen.....	165
Cucumbers, dozen.....	384
Celery, pounds.....	2,592
Chickens, dozen.....	15
Ducks, number.....	6
Eggs, dozen.....	882
Figs, pounds.....	180
Grapes, pounds.....	60,000
Gooseberries, pounds.....	40
Corn fodder, pounds.....	72,000
Hay, tons.....	128
Lettuce, pounds.....	3,328
Milk, gallons.....	24,081
Melons.....	720
Nectarines, pounds.....	400
Onions, pounds.....	34,465
Parsley, pounds.....	93
Potatoes (sweet), pounds.....	488
Peppers, pounds.....	416
Pease, pounds.....	356
Plums, pounds.....	3,000
Peaches, pounds.....	2,800
Pears, pounds.....	2,000
Prunes, pounds.....	40
Quinces, pounds.....	100
Radishes, pounds.....	2,565
Rhubarb, pounds.....	400
Raspberries, pounds.....	179
Squash, pounds.....	4,976
Strawberries, pounds.....	25
Tomatoes, pounds.....	19,229
Turnips, pounds.....	11,913
Cows and calves sold.....	\$210 00
Pork sold.....	\$1,651 20
Pork consumed, pounds.....	1,110
Calves consumed, number.....	1

METEOROLOGICAL TABLE.

The following Table shows the Average Mean, Maximum, and Minimum; also, Highest and Lowest Temperature per Month, per Year, and from November 7, 1876, to June 30, 1890; also, Rainfall for same period. Observations taken three times daily, by W. H. Martin, Pharmacist.

YEARS.	JULY.						AUGUST.						SEPTEMBER.					
	Rainfall for Month	Average Minimum	Average Maximum	Lowest	Highest	Average Mean	Rainfall for Month	Average Minimum	Average Maximum	Lowest	Highest	Average Mean	Rainfall for Month	Average Minimum	Average Maximum	Lowest	Highest	Average Mean

T. J. KEYS	Steward.
W. H. CHESTNUTWOOD	Supervisor.
MRS. M. E. RAMSELL	Matron.

DIRECTORS' REPORT.

To his Excellency R. W. WATERMAN, Governor of the State of California:

In accordance with the law controlling the management of the State Insane Asylum, we, as Directors, submit our biennial report for the two years ending June 30, 1890, together with the reports of the Medical Superintendent and Treasurer, which reports are made part hereof.

Since the submission of our last biennial report a complete change has been made in the medical managing officers of the asylum. Dr. W. H. Mays, who for nearly three years had been Medical Superintendent of the institution, and had zealously labored to promote its best interests, was compelled, for private reasons, to submit his resignation to this Board, at its meeting held September 10, 1888, and the same was accepted, to take effect November 1, 1888.

At the same meeting, Dr. W. R. Langdon, who had been long connected with this asylum as Assistant Physician, and who by his skill in his profession, his earnest and conscientious efforts to perform the duties of his position, his kind and humane treatment of the unfortunates under his care, and his courteous and considerate treatment of those associated with him in the conduct and management of the institution, had made himself esteemed and respected by all, also presented his resignation, much to the regret of all those who had known of his painstaking labors to ameliorate the condition of the patients over whom he had supervision and care.

At an adjourned meeting of this Board, held on September 11, 1888, Dr. H. N. Rucker was elected Medical Superintendent to fill the vacancy caused by the resignation of Dr. Mays, and Dr. J. D. Young was elected Assistant Physician, to fill the vacancy caused by the resignation of Dr. Langdon.

On May 10, 1889, in pursuance of an Act of the Legislature, approved March 15, 1889, this Board proceeded to elect an additional Assistant Physician, and this choice fell upon Dr. Thomas Phillips.

Dr. W. A. Washington, an Assistant Physician of this asylum for over three years, died September 4, 1889. He was a highly valued employé of this institution, and possessed in an eminent degree the qualifications of medical skill, humane instincts, pleasing personal address, to make him beloved by the patients under his care, and esteemed and respected by his associates. His death was deeply deplored by all.

At a meeting held September 26, 1889, this Board elected Dr. A. W. Hoisholt to fill the vacancy caused by the death of Dr. Washington.

Notwithstanding the fact of this unusual change in the medical management of the asylum within so short a period, we take pleasure in reporting that the selections to fill these important positions seem to have been well made, and each one has readily adapted himself to the performance of the duties of the position to which he has been elected; and each and all show a commendable ambition to make this asylum worthy of the confidence of the people, and a credit to the State from whose treasury it is supported.

We regret that we are again compelled to report that the appropriations made for the year ending June 30, 1889, and also for the year ending June 30, 1890, were inadequate for the support of this asylum. During the month of November, 1888, two hundred patients were removed from this asylum to that at Agnews. It was expected that this removal would have been effected at a much earlier date, but the delay in completing the work of furnishing accommodations at Agnews, postponed the granting of relief to the over-crowded wards of this institution until that time. By referring to the report of the Medical Superintendent herewith, for the year ending June 30, 1889, it will be seen that, notwithstanding the removal of two hundred patients to Agnews during that year, the total number of patients remaining in this asylum June 30, 1889, was only sixty-six (66) less than were here on June 30, 1888.

The excess of the expenditures for the fiscal year ending June 30, 1889, was \$11,557 32, as shown by bills now on file with the State Board of Examiners, and is to be accounted for, in part, by the large number of patients under care and treatment that year, and, in part, by an effort made to improve the condition of the patients by supplying better food and clothing.

The excess of expenditures over the appropriation for the fiscal year ending June 30, 1890, was \$9,971 99, also shown by bills now on file with the State Board of Examiners. This is to be principally attributed to the severity of the last winter. The grounds of the asylum were at one time overflowed, and basements and cellars filled with water. To keep the various buildings warm required an extraordinary consumption of coal, the cost of which was materially increased by the difficulty of transporting it to the asylum. The water from the basement had eventually to be removed by pumping, and provisions also made for draining the low places in the asylum grounds. The land under cultivation was rendered less productive, thereby seriously affecting an important source of supplies to the institution.

EXPENDITURES FROM CONTINGENT FUND.

As will be seen from the report of the Treasurer, considerable drafts have been made upon the Contingent Fund for extra work and material upon the new buildings lately erected upon the asylum grounds. The alterations have generally been made to conform to new conditions that have arisen since the buildings were first projected, and as none of the alterations have been of sufficient importance to necessitate a change of the original plans—the cost of no single change being \$1,000—the work has been ordered by this Board and the extra expenditures paid from the Contingent Fund, the architect and Superintendent of the buildings in every case fixing the prices to be paid for the several changes.

We have also to report that we have expended \$2,500 from the Contingent Fund in the purchase of three fourths of a block of land, and have had the same deeded to the State. This piece of land was situated near the former boundaries of the asylum grounds, but separated therefrom on two sides by unused streets, which could be closed without detriment to the public interest. The City Council of Stockton, upon a petition from this Board, passed an ordinance closing the said streets and granting the use of the ground to the asylum. By this purchase

and grant, the asylum is much benefited, as the land acquired is near the new building for the Male Department, and has furnished a convenient site for the new engine house and workshops that have been located thereon. The well for gas is also being bored upon the same piece of ground.

THE NORTH-STREET CANAL.

The extraordinary high water of the past winter seriously impeded the contractor in the completion of the North-Street Canal, besides seriously damaging and washing away portions of the levee that had already been completed. Further time had therefore to be granted for the completion of the work.

The pipe line designed for conducting the sewage from the asylum into a tidal basin in the canal, is now being laid, and will soon be completed, thereby removing a great cause for complaint, and improving the sanitary conditions about the asylum.

EXPENDITURES FROM THE APPROPRIATION FOR ERECTION OF NEW BUILDINGS, AND FOR PERMANENT IMPROVEMENTS, ETC.

By an Act of the Legislature approved March 15, 1889, an appropriation of fifty thousand five hundred dollars (\$50,500) was made for certain specified erections and improvements upon the asylum grounds.

Plans were carefully considered and finally adopted for the different buildings and improvements contemplated, to wit: for the erection of boiler house, engine-room, workshops, morgue, lavatories, ironing-room, associated dining-room, and residences for two Assistant Physicians and Supervisor. The contract for performing the work was duly let after advertising for proposals as required by law.

After the contract was let, however, there were changes in the conditions of affairs at the asylum which necessitated the modification of the plans in some respects, one of the most important of which was that of authorizing the contractor to construct the residence originally designed for the Supervisor upon the same plan that had been adopted for those of the Assistant Physicians. This change was effected because of the fact that the Legislature had provided for the employment of three Assistant Physicians at the asylum, and for the further reason that a residence for the Supervisor was not then demanded.

The total cost of changing this house so as to make it upon the same plan as the others was about \$900.

The cost of making the above mentioned change, as has been heretofore stated, was paid from the Contingent Fund, as was also that of several other changes in the original plans, which, in the judgment of this Board, seemed necessary in order that buildings and improvements should more fully meet the present requirements of this institution.

Although these improvements were not completed as soon as expected, owing to the impossibility of pushing the work during the past winter, at the present writing they are all finished and most are being used for the purposes for which they were designed, and it is confidently expected that soon all will be in use, to the great advantage and benefit of this institution.

APPROPRIATION FOR FURNISHING BOILER HOUSE AND FOR REPAIRING BUILDINGS, ETC.

In the expenditure of this appropriation made by the last Legislature, of \$29,750, plans and specifications for the proposed work were carefully prepared and two contracts let, one for the cement work and the other for plumbing, roofing, water tanks, and general repairs.

The Treasurer's report will show the amount expended from this appropriation up to June 30, 1890, since which time new boilers have been placed in position, and the work contracted for completed. The pipe connections between the new boilers and buildings are being made, and it is expected that they will soon be used for the purpose of heating the buildings, and a considerable saving in the consumption of fuel be thereby made.

We confidently submit these improvements to all interested in the welfare of the asylum, firmly believing that they have been judiciously made and the appropriations economically expended.

APPROPRIATION FOR WATER, LIGHT, AND FUEL.

In order to intelligently and legally expend the appropriation of \$40,000 made by the last Legislature so that, if possible, the results would meet the anticipations of the people, this Board consulted with the Attorney-General of this State, and obtained his opinion as to their powers and duties in the premises.

Being instructed that the matter of the expenditure of this appropriation was left with this Board, the members thereof being expected to use their best judgment as to the action to be taken, it was decided that as the Act of the Legislature expressly provided for boring wells to supply the asylum with water, light, and fuel, two wells should be bored—one for water and one for gas. It is a well known fact that water obtained from a well giving off a considerable quantity of gas is unsuitable for culinary or irrigation purposes, and it was therefore the purpose of this Board to bore one well to a moderate depth for the purpose of obtaining an increased supply of pure water for the grounds, which was much needed, while the well to be bored for gas should be sunk to as great a depth as possible. In June, 1889, the Board advertised for proposals for boring the two wells, as above stated, the bids to be opened at the regular meeting of the Board to be held on July tenth. At that meeting no propositions satisfactory to the Board were received, and an adjournment was then taken to July twenty-fourth, at which time contracts were made for boring each of the two wells. The water well has been completed, a fair flow of water being obtained at the depth of one thousand and seventy feet, which, having been analyzed by experts at the request of this Board, is pronounced to be of a quality suitable for culinary and irrigation purposes.

Unexpectedly, however, in boring this well a moderate flow of gas was obtained, and the same has been utilized by placing a receiver over the well and conducting the gas to the ironing-room of the laundry at the Female Department, where it is very successfully used in heating the irons. Besides the saving in fuel, the advantages derived in using gas for that purpose are particularly satisfactory to the persons there engaged, and as the supply is adequate for the requirements of the room, the

result of the experiment is very gratifying to the management of the asylum.

The amounts expended upon the gas well previous to June 30, 1890, are shown by the Treasurer's report. Since that time considerable progress has been made, and at one time a large flow of water and considerable gas was obtained from the well, but lately the contractor has met with an accident, which has seriously impeded the prosecution of the work, and the final result of his attempts to overcome the obstacles that now retard his progress cannot be foreseen. It may, however, be safely asserted that the probabilities of the existence of gas in such quantity as will justify the sinking of wells to secure its flow, have been strengthened by the efforts already made.

The condition of the various funds of the asylum on June 30, 1890, is shown by the Treasurer's report; but since that time expenditures have been made which have exhausted the appropriation for new buildings and permanent improvements. The appropriation for furnishing the boiler house and for repairs, and the work provided for by that appropriation, has been completed. Expenditures have also been made from the Contingent Fund in furnishing the new residences for the physicians, for which no provision had been made, and for constructing walks and grading streets upon the grounds, which will exhaust that fund when the work already projected and now being carried out is finished. All the work projected is imperatively demanded, in order that the full advantages to the institution anticipated from the erections and improvements already made, can be fully secured.

As will be seen from the report of the Superintendent, the residence so long occupied by persons in charge of this institution, has become so dilapidated as to be unsafe as "residence for the Superintendent and his family," and it has at this time been abandoned. During the last winter the moisture rose in the brick walls of the building for several feet by capillary attraction, thus rendering the rooms damp and unwholesome; and owing to the poor quality of the material of which the building is constructed, and the long period of over thirty years since it has been built, it is the judgment of this Board that it will not be in the interest of economy to repair this residence, and that provision should be made for the immediate erection of a new one more appropriate to the times and better adapted to the use of the Superintendent and family. The floor in the main halls and corridors of the building of the Female Department has become badly worn, and should be replaced.

The machinery in use in the laundry of the Male Department is so worn that it will also have to be replaced.

In order to make these necessary improvements, to wit: to erect a new residence for the Superintendent, to place new floors in the Female Department building, and the new machinery in the laundry, will, in our estimation, require an appropriation of at least \$45,000.

The expenses for supporting patients in this asylum for the year ending June 30, 1889, was 38 $\frac{9}{10}$ cents per capita; for the year ending June 30, 1890, 38 $\frac{8}{10}$ per capita. At the present time we have in this institution one thousand five hundred and eighty-five patients, and we expect that the average number for the next two years will be at least one thousand six hundred. In order to give that number proper care and such supplies as will render them such comforts as the State should

give its unfortunate wards, we think the appropriation for support for the next two years should be at least \$450,000.

Commending this important charity to your favorable consideration, we remain,

Very respectfully yours,

ROBERT WATT,
H. T. DORRANCE,
OBED HARVEY,
R. S. JOHNSON,
ARTHUR THORNTON,
Directors.

Stockton, October 10, 1889.

TREASURER'S REPORT.

OFFICE OF THE SECRETARY OF BOARD OF DIRECTORS, AND
TREASURER STATE INSANE ASYLUM,
Stockton, Cal., July 31, 1890. }

To the Board of Directors of the State Insane Asylum:

GENTLEMEN: In accordance with the by-laws of this institution, I have the honor to present the following biennial report of the receipts and expenditures of the State Insane Asylum at Stockton for the two years ending June 30, 1890:

GENERAL FUND.

SUPERINTENDENT'S REPORT.

YEAR ENDING JUNE 30, 1889.

To the Directors of the Stockton State Insane Asylum:

GENTLEMEN: I submit herewith my annual report for the year ending June 30, 1889. Another report will be required of the Superintendent before the time of making the usual biennial report to the Governor, and I shall offer no extended observations at this time.

For the past year the daily per capita cost of maintaining the patients has been 38.6 cents. This includes the entire expense for food, clothing, care, and medical attendance.

Respectfully submitted.

H. N. RUCKER,
Medical Superintendent.

STATISTICAL TABLES, 1889.

MOVEMENT OF PATIENTS.

	Males.	Females.	Total.
Number of patients July 1, 1888	1,190	456	1,646
Admitted during year	393	136	529
Whole number under treatment	1,583	592	2,175
Discharged recovered	147	44	191
Discharged improved	32	12	44
Discharged unimproved*	155	60	215
Discharged not insane	1	2	3
Died	100	34	134
Escaped	8		8
Total discharged, died, and escaped	443	152	595
Number remaining June 30, 1889	1,140	440	1,580

*Of those discharged as unimproved, one hundred and forty males and sixty females were transferred to the State Insane Asylum at Agnews, November 26, 1888.

SUPERINTENDENT'S REPORT.

YEAR ENDING JUNE 30, 1890.

To the Directors of the Stockton State Insane Asylum:

I have the honor to present for your consideration the report of the forty-first fiscal year, ending June 30, 1890.

The slight increase in per capita cost of maintenance for the past biennial period has been due, first, to the decrease in population by reason of the transfer of two hundred patients to the Agnews Asylum, and second, to the increased variety in the dietary of the patients, and the better grade of clothing furnished them. At the time the transfer was made, there were seventeen hundred patients in the institution; and while the number was materially changed, a corresponding reduction could not be made in the general expenses of the asylum.

The whole number of patients in the asylum at the beginning of the past fiscal year, July 1, 1889, and the movement of patients during the year, may be learned from the following summary:

MOVEMENT OF PATIENTS.	Males.	Females.	Total.
Number of patients July 1, 1889.....	1,140	440	1,580
Admitted during year.....	242	84	326
Whole number under treatment.....	1,382	524	1,906
Discharged recovered.....	112	22	134
Discharged improved.....	30	15	45
Discharged unimproved.....	11	8	19
Discharged not insane.....	4		4
Died.....	91	20	111
Escaped.....	5		5
Discharged, died, and escaped.....	253	65	318
Number remaining June 30, 1890.....	1,125	459	1,584

The institution has been remarkably free from epidemic disease. The malady popularly termed "la grippe" has passed us by unharmed.

The percentage of deaths, as compared with last year, has been notably less. Many of the deaths which have occurred have been among the aged and infirm.

The past winter was unprecedented in the annals of the asylum. Almost the entire grounds were inundated, and for a period of about four months the weather continued so damp and cold that scarcely anything could be done in the garden, and the result has been a diminished production of vegetables.

In consequence of the long, wet winter, the item of fuel has been an expensive one, and the same cause has delayed the completion of improvements and repairs for at least four months.

The money appropriated by our last Legislature for improvements and

repairs at the asylum, has been judiciously and economically expended. But unfortunately the amount was inadequate to meet all the requirements.

The item of reflooring the Female Department building was unfortunately overlooked, and was not included when making estimates on the work. It is of the utmost importance that something should be done to meet this necessity. Nearly all the floors in the main halls of the building have hardly been fit for use for the past year. In many places they are entirely worn through, and are becoming dangerous. It is also very necessary that the walks and driveways should be improved. During the past two winters the driveways have been almost impassable, and they sadly need paving.

The old residence, heretofore occupied by the Superintendent, became so damp and rickety that it was considered unsafe longer to live in it. The Superintendent is now domiciled in one of the new residences built for the Assistant Physicians, and one of the physicians remains unprovided for. It will be necessary to build another house before all the physicians can be accommodated on the grounds.

To meet the improvements and repairs mentioned above will require an extra appropriation of fully \$45,000.

I regret to report a deficiency for the past year of \$9,971 99, and with the present number of patients, and the prospective increase, the annual expenses will continue to exceed the present appropriation.

There is little prospect that our population will be diminished for the next two years, but on the contrary we may reasonably expect an increase.

The per capita cost of supporting the patients cannot be lower, without disregarding their comfort and well being. Strict economy has been exercised, but it has been impossible to avoid a deficiency for the past several years. To maintain the large number of patients that must necessarily be cared for in this institution during the next biennial period, will require an appropriation of \$450,000.

The expenditure of the appropriation for improvements and repairs entailed a deal of work and expense that it was impossible to estimate in the beginning, and our laboring force has been very busy. For the same reason, drafts upon the Contingent Fund have been large, and to meet all the requirements, it has been necessary to employ much additional help during most of the time the work was in progress.

After the further contemplated improvements have been made, viz.: the reflooring of the Female Department building, the paving of the drives and walks, and the erection of a residence for the Superintendent, the asylum will be in a very satisfactory condition; and it will be many years before another extra appropriation will be needed.

ESTATES OF INSANE PERSONS.

The attention of the Legislature should be called to the manner in which the small estates of persons who have been committed to the insane asylum are managed. And, in this connection, I wish to say that I intend no reflection upon the guardians of such persons, or upon the Courts. It is the system of administration to which objection is made.

Under the present method of management, a small estate may be,

and often is, kept in Court for an indefinite period—for such a length of time, in fact, that a fourth or a third of it is eaten up by costs, commissions, attorneys' fees, and other expenses. There is an obvious wrong in such a method of administration. If a person is to derive any good from his estate, the benefit should come when he needs it most. A better plan for the management of the estate of insane persons than the one now existing should be provided.

In the great majority of cases, the physicians who have the insane person constantly under their charge, can, within a period of six months, form a reasonably correct judgment as to whether he will recover or not. And if it shall appear that there is no likelihood of his recovery, then the Superintendent of the asylum in which such insane person is an inmate should file a certificate to that effect in the Court out of which letters of guardianship were issued. Then, if the estate be small—say of \$1,000 or less—and does not constitute the means of livelihood of any person whom the insane person would be bound to support, such estate should be converted into money, and the money turned over to the Treasurer of the asylum of which such insane person is an inmate. The Treasurer should be required to place the money at interest in some savings institution, to be drawn upon by the Superintendent for the support and other expenses of the insane person. And any sum thus drawn shall constitute and be treated as a part of the Contingent Fund. By some such provision as this, the State would get all that it has a right to claim, and the welfare of the insane person be kept steadily in view.

There is an important consideration, however, which should not be lost sight of. In seeking to indemnify itself for the cost of maintaining the insane, the State should not take that which is the support of those whom the insane person would be legally or morally bound to cherish, if he were otherwise situated. In other words, when the estate is required for the support of those who would be dependent upon the insane person, if he were sound and well, the State alone should bear the charge of his maintenance.

PUBLIC VISITORS.

It has been the custom for years to exclude male visitors from the wards of the Female Department, except in special instances, and a like rule has lately been adopted in regard to the visits of ladies to the wards of the Male Departments, except on errands of mercy to personal friends; or the visits of relatives, when in the judgment of the physician such visits will not prove detrimental to the patient.

After careful observation, I am of the opinion that the indiscriminate visits of the general public to our asylums is productive of positive mischief, and should be prohibited. The great majority of people who throng our asylums as visitors are mere sightseers or curiosity hunters, and, as a rule, fail to appreciate properly the great aim the State has in view in equipping and supporting these institutions.

There are always a large number of patients confined in our asylums who are keenly alive to the humiliation of being regarded as objects of curiosity and gossip, and some are abnormally sensitive upon this subject. This almost daily embarrassment and disturbance to such patients can but aggravate their symptoms and retard their recovery; for many who are admitted to asylums need no other treatment than absolute

rest, seclusion, and freedom from the harrowing cares and responsibilities of business associations.

The public generally would hardly presume upon invading the wards of a hospital devoted to the treatment of physical ailments, for reasons that seem to be well understood; nor is there any more reason why the public should invade the rights of those who are unfortunately confined in our State hospitals for mental diseases. It is simply a relic of the ignorance, superstition, and barbarity of the not very remote past, which prompts the morbid curiosity of our people, and the practice of unlimited freedom in this particular should be restricted. There is no warrant, either in humanity or expediency, for the indiscriminate and wholesale admission of the curious public to the wards of our asylums, as is the custom at the present day.

The doors of an asylum should ever be open, however, to the conservators of public interests, such as public officials, the press, the clergy, and the medical profession. Relatives of patients are always welcome; for with the proper knowledge of the discipline and order maintained in the wards, the kind and considerate care bestowed upon the patients, and the precautions taken for their safety, will inspire confidence in the management, and an increased respect for the institution.

ASYLUM INTERNES.

I am sure good would result from offering inducements to young physicians to serve as internes in our asylums for a stated period. These should be selected from young unmarried men who have finished the required course in accredited medical schools. They should be elected by the Board of Directors, and furnished with board and lodging on the asylum premises, and a small amount, say of \$20 per month, for clothing and incidentals. The term of such service should be limited to one year, and the number of internes to one in each institution, and upon the expiration of whose term, another should be elected. Each applicant for the position of interne should be required to furnish a satisfactory recommendation from the Dean of the Medical College from which he has graduated, and also certificates of good moral character.

After an interne has served the required time, or has honorably severed his connection with the asylum, he should be entitled to a certificate from the Superintendent, or Chief Medical Officer of the institution, setting forth the length of service, habits of application, efficiency, etc.

From among those who had availed themselves of this special course of study, vacancies in asylum staffs could be filled.

CHANGE OF NAME.

Observation has convinced me that there is much in the name when considering the official title of our institutions for the insane, and I believe the elimination of "lunatic" and "insane" would free these institutions from much of the distressing influences and terrors which attach to them in the weak and timid minds of a large proportion of those who should have, or are receiving, the protection and shelter they afford.

The abuses which were practiced in the past through ignorance and superstition, have left a stigma upon asylums, which abides to this day

with the uninformed and the feeble-minded; and such fail to even faintly appreciate that the word asylum signifies the refuge and protection of a philanthropy both exalted and beneficent. Hence it is that many, through prejudice gained in this way, shrink from custody and treatment in an institution where the very name recalls so many unhappy impressions.

In many of the Eastern States the word "hospital" is very properly taking the place of "asylum," and there is consolation in the association of the word. In the first instance, we have the conception of physical disease in its relation to scientific treatment; in the second instance, there is conjured up in the mind the association of hopeless calamity and a lasting stigma.

Believing that it should ever be the aim of public functionaries studiously to consider the best means of protecting the public weal, I invite your attention to these suggestions, which I trust may meet with your sanction.

A less objectionable title would be, State Hospital for Mental Diseases; or still better, Stockton State Hospital, Napa State Hospital, etc., according to locality.

TRANSFER OF CHINESE PATIENTS.

Attention has been called in previous reports to the transfer of Chinese insane to their native land; but so far, the subject seems to have been treated with indifference. Viewed from an economical standpoint, I am sure it would be greatly to the advantage of the State to make the necessary provision for shipping them out of the country.

There are in this asylum at the present time, seventy-seven male and three female Chinese patients. Fully nine tenths of these may be classed as chronic cases, and will be a charge upon the State as long as they live. In the Napa Asylum there are thirty-nine, and in the Agnews Asylum eleven more, making a total of one hundred and thirty that are being maintained at an annual cost to the State of about \$18,000.

The estimated cost of sending all these patients to China is considerably less than one half the expense of supporting them in the asylum for one year. This estimate includes everything, even to the cost of experienced attendants to care for them while making the voyage. Aside from the expense of caring for these people, the question of additional room gained by their removal is one of great importance.

An effort should be made to induce the Legislature to memorialize Congress with the view of devising some plan under which all Chinese who are now inmates of our asylums, or who may hereafter become inmates, may be returned to their native country.

RELIGIOUS SERVICES.

Religious services have been held weekly—on Sabbath afternoons—much of the time for the past two years, in the Social Hall. The clergymen of every denomination in this city were invited to hold services, with the understanding that if, after trial it was thought to be productive of good, the services should be regularly continued, unless some special reason might prevent. Five ministers responded to the invitation, and as the patients have evinced such an interest in the services it has been considered best to continue them. The hall is comfortably filled

each Sabbath by an orderly and attentive audience. An organ has been purchased from the Fancy Work Fund, several dozen chapel service books have been procured, a good choir has been organized, and the singing is excellent. Many of the patients derive more comfort and enjoyment from this than from any other diversion that has been offered them.

Each minister is paid \$5 for each service held.

EMPLOYMENT.

Under the patient management of Mrs. Ramsell, the Matron, and with the kindly aid of the attendants, a system has been inaugurated of giving many of the women useful and pleasant employment in the way of knitting, crocheting, embroidery, and the making of a variety of fancy articles; the proceeds of the sale of which have been devoted to a special fund, to be used for the purchase of books and other things most needful for the amusement of the female patients.

This plan was not adopted with a view of pecuniary profit, but rather as a means of whiling away the tedium of asylum life.

AMUSEMENTS.

Except during the warm summer weather, weekly entertainments have been regularly provided for the patients. These entertainments have been varied with a view of gratifying the tastes of all so far as practicable. Some theatrical plays have been furnished by the attendants, they being well rendered, and much appreciated. A vocal and instrumental concert once a month, under the management and leadership of Dr. Hoisholt, has proved quite a feature.

Probably the most novel and enjoyable entertainment that was ever had in the history of this asylum, was given on the evening of Washington's birthday; it being a grand mask calico ball. The costumes for the ladies were made by the female attendants and patients. Those for the gentlemen were made by that ever faithful and ingenious servant of the State, Mr. T. W. Eaves, and although made from cheap grades of calico, yet such taste and harmony was exhibited in the blending of the various colors as to render them peculiarly rich and attractive in appearance. The grand march presented a novel spectacle, with nearly a hundred well sustained characters on the floor.

The amusement and gratification it afforded the patients more than compensated for all the trouble entailed. The event furnished a subject for discussion long after its occurrence, and the monotony and humdrum of asylum life was lessened for a time at least.

BEREAVEMENTS.

The biennial period now drawing to a close has had its bereavements. Three trusted servants of the State in the employ of the asylum have passed to their final reward.

Charles Ruoff, on account of failing health, tendered his resignation in March, 1889, after a continued service of twenty-nine years, and he died on the eighth day of May, 1889. He always merited the confidence of the management for punctuality, and for the faithful manner in which

he discharged the important duties of Night Watchman for so many years. Mr. Ruoff was a musician of considerable ability; and in this, and other ways, rendered material aid in affording amusement and diversion for the patients. His loss is deeply felt.

On April 23, 1889, Mr. Jos. B. Watson, the Supervisor, died after a tedious and painful illness. The trying position which Mr. Watson so ably filled was a constant proof of his remarkable fitness and adaptability. A more zealous, painstaking, efficient, and discreet officer one seldom meets. I speak from an experience gained through the most intimate, confidential relations with him from the time I assumed control of the asylum, and at the time when his familiarity with details made him an indispensable factor in the successful conduct of the affairs of the institution. With all due respect and credit to his memory, be it said that he was never found deficient in discretion and sound judgment. In all his actions he was ever influenced by the highest standard of moral excellence. He was just and honorable, because it was most suitable to his tastes. He was ever gentlemanly in bearing, for the reason that it was an instinct of his noble nature. His devotion to duty was remarkable; and with conscientious regard to precision and detail, he continued his services contrary to the advice of the medical staff, and at a time when only the bravest heart could brook such physical pain. Full of hope to the end, he bore his sufferings patiently and uncomplainingly, and ended his career as an honorable, upright, and polished gentleman.

Dr. William Augustine Washington, the First Assistant Physician, died of apoplexy on September 4, 1889, at San Diego, where he had gone in quest of health. He had been ailing for some time, but performed his accustomed duties to within a few days of his death. His sudden demise was unexpected, and was a terrible shock to his family and his numerous friends.

Dr. Washington was a lineal descendant of the Washington family, around the name of which clusters a halo of memories of self-sacrifice, liberty, and patriotism. He was born on the bank of the Potomac River, in Westmoreland County, Virginia, on March 5, 1833, and was at the time of his death fifty-six years, five months, and nineteen days old. His medical education was obtained at the Virginia Medical College, from which he graduated on March 9, 1858. He was early married to Miss S. J. James, who survives him. To them were born seven children; four of whom, three daughters and a son, are living. From the time he graduated in medicine to the close of his life, his time was occupied in the practice of his profession. His early career as a physician was spent in his native State, in South Carolina, and in Maryland. In 1872 he came to California, and practiced for a time in Vallejo. In 1873 he moved to Merced, where he enjoyed an excellent practice for eight years, moving from there to San Francisco. After a year's residence there, he came to this city, and was in 1886 elected an Assistant Physician at the asylum.

Dr. Washington was one of the most conscientious physicians I ever knew, both in regard to his duty to his patients and his professional fellows. He was a close observer of the ethics of his profession, and would never knowingly infringe upon the rights of others. In all his obligations to the sick he was as true as the needle to the pole. His visits to the sick chamber were benedictions. His genial smile, warm grasp of

the hand, his assurance of tenderness and sympathy, and his cheering words were oftentimes more potent than the resources of the pharmacopœia. His friendships were true and lasting, and the individual in the humblest walk in life could ever approach him in confidence of meeting with recognition and a hearty response. His attitude before his fellow man was ever gauged by a just sense of respect for the rights of others; hence, arrogance and bigotry were as foreign to his nature as would be perennial bloom on glacier mountains in polar seas. In his views on all subjects, he was liberal and free from fanaticism. His gentlemanly instincts bore him above caprice and contumely, while comity of manner and the due observance of the social amenities were singularly characteristic of the man.

Home was made more sacred through the richness of his bright example as husband and father; for with his family he was kind and indulgent, and his heart glowed with affection. In the daily routine of his duties to the sick the purity and sweetness of his generous sympathy illuminated his face with a benign expression that reigned as the countenance of his soul. Hence it was that among the suffering and sorrowing he was greatly appreciated; and when the sad news came that his life was ended, many hearts were made desolate. Even from the asylum wards, where he had so recently labored, came expressions of sorrow from those who had lost their true friend and sympathizer.

While he loved to be appreciated for his own true worth, yet public notoriety and eclat were inimical to his tastes, and were embarrassing in the extreme. No one was freer to accord to others the award of merit. Nevertheless, ostentation and vainglory he utterly despised.

He was a man of pure thought and of bright example, and his influence was salutary and benign. Constancy and integrity were distinctive marks of his character, and he died as he had lived, a trusted friend, affectionate husband, devoted father, good citizen, faithful, skillful, and unpretentious physician.

ACKNOWLEDGMENTS.

During the incumbency of my esteemed predecessor, Dr. W. H. Mays, an appeal was made to the newspaper press throughout the State for gratuitous copies of the various journals for the use of the patients. It affords me the greatest pleasure to hereby express my gratitude for these continued favors. The following are still regularly received and distributed among the patients:

Daily.—San Francisco Call, Daily Alta, Courier de San Francisco, Abend Post, Evening Post, Stockton Independent, Evening Mail, Sacramento Record-Union, Sacramento Bee, San José Herald, Fresno Republican, Virginia City Chronicle, San Bernardino Courier, Sonoma Democrat, Daily Morning Republican, Stockton Republican, La Voce del Popolo.

Weekly.—San Francisco Chronicle, Examiner, Weekly Post, Journal of Commerce, Report, Spirit of the Times, Jewish Progress, Rural Press, Stockton Record, Franco-Californian, Stockton Independent, Amador Dispatch, Anaheim Gazette, Biggs Argus, Colusa Sun, Contra Costa Gazette, Dixon Tribune, Ione Valley Echo, Kern County Californian, Los Angeles Tribune, Los Angeles Weekly Herald, Los Angeles Times-Mirror, Lakeport Democrat, Lodi Sentinel, Livermore Echo, Marysville Appeal, Ontario Record, Placer Argus, Placer Republican, Santa Ana

Standard, Santa Clara Journal, San Diego Union, Sonoma Democrat-Banner, San Benito Advance, Visalia Delta, Post-Intelligencer, Gridley Herald, Plumas National, The Pacific, Petaluma Courier, Bedrock Democrat, Tulare County Times, Catholic Review, Calaveras Chronicle, Cloverdale Reveille, Rohnerville Herald, Lyon County Times, Mariposa Gazette, Placer Herald, Tuolumne Independent, Lake County Avalanche, Weekly-Disseminator, Yolo Mail, Tulare Register, San Miguel Messenger, Oregon Statesman, Stanislaus News, Sierra Valley Leader, Galt Gazette, Scientific Press, Calaveras Prospect, Colusa Herald, Der Deutsche Amerikaner, Contra Costa Democrat, Porcupine, Scott Valley News, Tacoma News, Winters Express, Inyo Register, Inyo Independent, Western Watchman, Mendocino Beacon, Las Gatos News, Weekly Revueille, Corvallis Gazette, Salinas Democrat, The Inlander, Virginia Chronicle, Mountain Messenger, Monitor.

I also take pleasure in expressing my obligations to the following persons for their kind assistance in furnishing amusement for the patients, and for large contributions of fancy work, magazines, periodicals, books, etc.:

Mrs. and Miss Edith Eaves, Mrs. S. D. Abramsky, Misses Louisa and Emma Cordes, Misses Gertie and Amy Hopkins, Miss Gertie Lang, Miss Nannie McCarty, Miss Mary Miller, Miss Esther Marks, Miss Ada Wheaton, Miss Nellie S. White, Miss Parks, Mrs. Gifford, Misses Nellie and Mamie Miller, Misses Myrtle and Pearl Abbott, Miss Nellie Deeble, Mr. Ira D. Ladd, Mr. M. Wenk, Mr. William Jones, Mr. E. Sylvia, Mr. G. Earle, Mr. L. Harkness, and the Stockton Sing Verein, comprising Messrs. Schneider, Wirth, Simon, and Felchin.

Thanks are specially due to Miss Eliza Lang and Mr. H. Prangley, for their kind assistance on various occasions in drilling the attendants for our theatrical entertainments.

It is very necessary that those having the immediate care of the insane should be possessed of special qualities of heart and temperament. In fact, one who does not have perfect self-control is out of one's sphere when on duty in the wards of an asylum. It is not surprising, then, that in an institution giving employment to so large a number, that some are found, who, upon trial, prove to be wholly unfitted for the work. The rule has been to select from the large number of applicants only those who give the very best promise of success without any regard to personal favoritism.

A few have been dismissed who had not the necessary qualifications, or for violation of the rules. But I venture the assertion, that taken as a whole, no more intelligent or trustworthy body of men and women is to be found in any asylum anywhere, than those who do service in the capacity of attendants at this institution. I take this occasion to publicly express my thanks to them for the faithful, intelligent, and zealous manner in which they discharge their duties, and for the constant courtesy and respect which they have shown me.

To all the employes and officers whom I am necessarily more closely associated with in the management of the asylum, I am ever conscious of my debt of gratitude. Their uniform constancy and their regard for the best interests of the asylum are most commendable.

To Drs. Young, Phillips, and Hoisholt, I have reason to be grateful. They have ever shown a kindly interest in the successful management of the institution, have always been willing to aid me, and lighten my

burdens in every way they could, and my association with them has been most pleasant and gratifying. Through their kind assistance, considerable pathological work has been done since the completion of our new morgue, and a systematic record is being kept of the more important cases.

In conclusion, I desire to thank you, gentlemen of the Board, individually and collectively, for your uniform courtesy and kindness, which I assure you, in all sincerity, is most heartily appreciated.

The comfort, happiness, and general welfare of the patients, and the asylum in all its varied interests, have been objects of daily solicitude with me.

If, during my endeavors to satisfy your most sanguine expectations, I have succeeded in meeting your approval, I shall feel more than repaid for all my efforts.

H. N. RUCKER,
Medical Superintendent.

REPORT.

To his Excellency R. W. WATERMAN, Governor of the State of California:

SIR: The Trustees of the State Insane Asylum at Agnews herewith respectfully submit to you their biennial report covering the two fiscal years ending June 30, 1890, showing the financial and general condition of the institution, and the various building operations carried on during the two years referred to.

Since the last report made by the Trustees, the title and status have been changed; the former from "The California Hospital for the Chronic Insane," to "The State Insane Asylum at Agnews;" the latter from an Hospital for Chronic and Harmless Cases, to an Asylum of General Commitment. The Act making this change took effect March 11, 1889. Prior to that time patients had been received, in terms of the enabling Act, from the other asylums, as follows:

October 30, 1888, seventy-five patients received from Napa—fifty males and twenty-five females. November 26, 1888, received from Stockton two hundred patients—one hundred and forty males and sixty females. On December 12, 1889, one male patient was transferred from Napa. February 2, 1889, one male was transferred from Stockton. February 18, 1889, one hundred patients were transferred from Napa—sixty-five males and thirty-five females. Making the total number transferred from Stockton and Napa up to February 18, 1889, three hundred and seventy-seven.

The first commitment made under the Act of March 11, 1889, was on the twenty-sixth of that month. Since that date there have been three hundred and one patients admitted, two hundred and nine being males, and ninety-two females; making the total number received six hundred and seventy-eight.

The discharges, elopements, transfers, deaths, etc., are as follows: Discharged recovered, forty-seven; discharged improved, twenty-two; died, seventy-one; discharged unimproved, seven; not insane, one; transferred to Stockton, one; eloped, two; leaving in the asylum, June 30, 1890, five hundred and twenty-seven patients.

The excessive mortality, apparent in this statement, is explained by the fact that a majority of the patients transferred from Stockton and Napa were long past middle life, and many of them physically feeble.

We would report the completion of Ward Buildings Nos. 2 and 4, and carpenter shop and morgue (referred to in last report as in process of construction). These buildings were finished on or about June 10, 1889. As soon as the appropriation made for the purpose by the last Legislature was available, the two ward buildings referred to were furnished, and are now occupied.

In addition to these buildings, the last Legislature made an appropriation of \$125,000 for an administration building, and \$80,000 for an additional ward building. On September 13, 1889, contracts were let for both of these buildings. They are at this date very near com-

pletion. The same Legislature having made appropriations for the furnishing of these buildings, they will be occupied within a few months.

During the last two years Ward Buildings Nos. 2 and 4 have been supplied with a heating apparatus and fire service. On May 13, 1890, a contract for gasworks was entered into. These works will soon be completed. From the appropriation made for that purpose a watchman's electrical clock and fire alarm system has been placed in the buildings. In addition to the work referred to, subsidiary sewers have been constructed, connecting Ward Buildings Nos. 2 and 4 with the main temporary sewer. Concrete floors have been laid in boiler and engine house and Ward Building No. 1, and railroad track through basement, connecting latter building with the kitchen. There have also been constructed exercising yards for patients, in the rear of Ward Buildings Nos. 1, 2, and 4. A cow barn, and shed for the protection of farming implements, and a propagating house, have been erected. Grading, graveling, and the planting of trees and shrubbery have been carried on as well as the limited means at hand would permit. The asylum, as it now stands, that is, with administration building and Ward Building No. 3 completed, will accommodate about eight hundred patients.

From the commitments made during the last two years we feel confident that this number will be attained during the next two years. When the proximity of this asylum to the center of population in the State is considered, it will be apparent that a majority of the commitments will naturally be made to this institution. During the last year, out of nine hundred and eleven patients committed to the asylums of the State, four hundred and seventy-nine were from points within forty miles of Agnews. The asylums at Stockton and Napa are to-day in the same crowded condition they were when this asylum relieved them. In view of this fact, we deem it imperative that some provision should be made for the reception of the patients in excess of the number which could now be accommodated in the asylum, and for this purpose we would suggest the advisability of an appropriation for additional buildings. Two ward buildings, accommodating three hundred and sixty patients, can be erected at the low per capita of about \$485. This is made possible by the fact that the subsidiary buildings of the institution, such as kitchen building, bakery and laundry, boiler and engine house, and machinery, gasworks, carpenter shop and morgue, and water supply, are of a capacity for ward buildings sufficient to accommodate one thousand five hundred patients. Another point in favor of increasing the capacity of this asylum is the fact that by so doing the per capita cost of maintenance can be materially reduced.

We would call your attention to another important point in this connection: The fact that this asylum, being contiguous to the center of population of the State, comprising the great counties of San Francisco, Alameda, Santa Clara, Santa Cruz, San Mateo, Monterey, etc., will make it a favored institution among the friends and relatives of the unfortunates confined therein, on account of the railroad facilities which will enable them to leave their occupations, visit the asylum, and return on the same day, at comparatively nominal expense.

In the last report, the Trustees asked for an appropriation for the improvement of grounds, of \$20,000. This the Legislature did not see fit to grant, which is to be regretted, as the nature of the ground makes

it imperative that considerable work be done on the same, and especially in the planting of trees, etc.; this loss of two years is most unfortunate. We sincerely trust that the present Legislature will make an appropriation sufficient for this purpose. Another pressing necessity is a permanent sewerage system. As was stated in the last report, there is now a temporary sewer, emptying into a creek a short distance from the asylum buildings. This is most objectionable, being a menace to the health of those at the asylum, and the residents in that vicinity. The city of San José has been compelled to do away with a sewer emptying into the creek near this point, and to build, at large expense, a brick sewer to tide water.

It is the judgment of the Trustees, that a permanent sewer should be constructed from the asylum buildings to tide water on the bay, some four miles distant, and an appropriation is asked for this purpose.

We do not deem it necessary to emphasize the necessity of proper appropriation for the regular support or maintenance of the institution, feeling sure that the Legislature will grant the sum asked without any urging on our part.

For financial report of expenditures made from the appropriations of 1887-89, covering the period from July 1, 1888, to June 30, 1890, see report of Secretary and Treasurer, herewith appended.

For detailed statement of the general affairs of the asylum, necessity of appropriations, movement of patients, product of farm, etc., we would refer you to the report of the Medical Director, accompanied by the Steward's report, which are herewith annexed.

Below you will find statements of estimated required appropriations for the next two fiscal years.

Respectfully submitted.

Trustees.

STATEMENT OF ESTIMATED APPROPRIATIONS REQUIRED.

Maintenance, salaries, etc., of the asylum.....	\$275,000 00
Main sewer.....	20,000 00
Improvement of grounds.....	20,000 00
Additional buildings.....	175,000 00

REPORT OF SECRETARY AND TREASURER.

To the honorable Board of Trustees of the State Insane Asylum at Agnews:

GENTLEMEN: Herewith find statements of expenditures for the two fiscal years ending June 30, 1890.

These expenditures are divided into two statements, as they are made from the appropriations of 1887, which were for the thirty-ninth and fortieth fiscal years; and of 1889, available during the forty-first and forty-second fiscal years.

For expenditures of appropriations of 1887, made prior to July 1, 1888, see last biennial report.

Expenditures from July 1, 1888, to June 30, 1889:

Support of hospital:		
Asylum	\$68,819 79	
Administration	2,743 92	
		\$71,563 71
Furnishing		18,477 91
Improvement of grounds		2,500 00
Purchase of live stock		849 47
Additional buildings:		
Contracts for Ward Buildings Nos. 2 and 4	\$119,199 70	
Contract for machinery	23,334 00	
Building expense—Architect's fees, Superintendent of Construction, surveying, advertising, etc.	6,294 87	
Other buildings:		
Reservoir	2,472 00	
Completion of smokestack	3,365 00	
Gas machine	3,000 00	
Subsidiary sewers	872 58	
Concrete floors and railroad track	2,857 00	
Extra work on machinery	1,968 88	
Extra work on second story laundry building	1,634 00	
Carpenter shop and morgue	4,798 00	
Plumbing, painting, sewers, and extra work on various buildings and machinery	4,073 97	
		170,870 00

Appropriations of 1889:

Support or maintenance of asylum	\$200,000 00
Administration building	125,000 00
Additional ward building	80,000 00
Heating	20,000 00
Lighting	25,000 00
Furnishing three ward buildings	10,000 00
Furnishing administration building	10,000 00
Watchman's clock indicator	1,000 00
Purchase of live stock	3,000 00

Contracts already awarded, and liabilities created against these various appropriations, will exhaust the same during the forty-second fiscal year.

Herewith find statement of expenditures of appropriations of 1889, covering the period between July 1, 1889, and June 30, 1890:

Support of hospital:		
Asylum	\$89,683 81	
Administration	2,309 44	
		\$91,993 25
Purchase of live stock		2,406 15
Furnishing three ward buildings		7,557 60
Heating		9,886 37
Lighting		443 62
Additional buildings:		
Administration building:		
Building expense	\$8,021 08	
Contract for building	67,497 00	
		73,518 08
Ward building No. 3:		
Building expense	\$3,791 10	
Contract for building	44,771 50	
		48,562 60

CONTINGENT FUND.

Receipts and disbursements from July 1, 1888, to June 30, 1890:

RECEIPTS.		
Cash on hand July 1, 1888		\$661 05
Pasturage		5 00
Fruit and produce		373 77
Miscellaneous		156 30
Hay		1,936 36
Live stock		622 20
Pay patients		2,657 00
		\$6,411 68
DISBURSEMENTS.		
Expenses, asylum		\$636 25
Expenses, administration		1,236 94
Expenditures account, exhausted appropriations		230 34
Cash on hand June 30, 1890		4,308 15
		\$6,411 68

Respectfully submitted.

SAN JOSÉ, CAL., October 8, 1890.

L. G. NESMITH,
Secretary and Treasurer.

REPORT OF MEDICAL DIRECTOR.

To the honorable Board of Trustees of the State Insane Asylum at Agnews:

GENTLEMEN: I herewith submit to you my reports for the two years ending June 30, 1890.

From the summary which follows, it will be seen that we commenced the year July 1, 1889, with three hundred and sixty-five patients; received two hundred and eighty-nine, and that the whole number under care and treatment was six hundred and fifty-four; discharged cured and improved, sixty-four; discharged unimproved, seven; not insane, one. There were fifty-four deaths and one escape.

Of the deaths a large number were chronic cases who had been inmates of asylums for many years. The winter months of December and January, which were attended by a large mortality throughout the State, were marked by an unusually heavy death rate with us.

Of the number admitted, eighty-nine were native born; one hundred and seventy-seven foreign born, and of twenty-three the nativity was unknown.

In looking backward over the period covered by this report, a few remarks as to the institution and its character may not be out of place, in consideration of the fact that it is a new asylum, and this its first report since its opening for the reception of patients. Under the name of the California Hospital for the Chronic Insane, and under the superintendency of Dr. W. W. Macfarlane, it was opened for the reception of patients October 30, 1888, on which day it received seventy-five patients of the chronic class transferred from the Napa Asylum for the Insane. Later transfers of chronic cases were made from the Stockton and Napa Asylums, bringing the entire number so received up to three hundred and seventy-seven. Dr. Macfarlane, to whom is due the credit of the organization and successful beginning of the institution, remained in charge until June, 1889, when he resigned to return to private practice.

Originally intended for the care of the chronic and harmless class of the insane, it remained more a home for those insane, who, by reason of the duration and character of their diseases, were looked upon as beyond a hope of recovery, than a hospital for the treatment of diseased minds, until March, 1889, when, by Act of the Legislature, it was authorized to receive patients by direct committal, as in the State Asylums at Stockton and Napa, and its name was changed to the State Insane Asylum at Agnews. Since the change it has received all classes of cases from nearly every section of the State.

The entire block of buildings contemplated by the various appropriations will be fully completed by December of this year. Upon its completion it will accommodate eight hundred patients properly. Built as it was, for the care of the chronic and harmless classes of the insane, its wards are not arranged in the most convenient manner for the treatment of acute cases, yet it has so many improvements, suggested by experience, that it may be said to be one of the best asylums in the State.

The various buildings composing the asylum proper are built of brick with stone trimmings, and form handsome and imposing structures, solidly constructed, and a credit to the State. In connection with the buildings we have a tract of land of about two hundred and seventy-five acres, affording space for farm, garden, and pasturage for our stock. Located about six miles northwest of San José, we are near enough to the bay of San Francisco to enjoy the tempering influence of the sea breezes.

Centrally situated, in one of the most flourishing and populous portions of the State, it would seem as if the institution was destined to become a large one from the very force of circumstances.

In view of the purpose for which it was created, it becomes necessary from time to time to ask for appropriations to render it even better adapted to care for those who come to it for relief, or are sent to it for the protection of themselves and the community.

The State is noted for its liberality to the defective and dependent classes, and though the burden may sometimes seem hard for the taxpayers to bear, they cannot but feel that money spent for humanity's sake is money well expended.

In the conduct of the asylum, I have endeavored to avoid any unnecessary and extravagant expenditure of the funds allotted your honorable Board for its support, and yet not to allow myself to go to the other extreme of parsimony. In all new institutions of this character, with a relatively small number of patients, the cost of maintenance appears large when compared with the older asylums, yet with a close attention to economy we have been able, during the fiscal year just passed, to keep well within the amount allowed us for support.

For the ensuing two years, I feel that it is safe to estimate that we will be able to maintain the asylum, with a due and proper regard for the comfort of its patients, at a cost of 48 cents per day per patient.

It is well within reason to expect that the house will be occupied to its full capacity of eight hundred patients during the next two fiscal years, and on this basis it would therefore require \$271,560 to support the institution up to June 30, 1893. To this sum should be added the sum necessary to pay for the insurance of the buildings, which would bring the entire amount up to \$275,000, in round numbers. This amount (\$275,000), I respectfully suggest to your honorable Board, should be asked of the Legislature for the purpose of support.

GROUNDS.

Nothing so adds to the attractiveness of an institution of this character as beautiful grounds and gardens. The grass plots, shaded by shapely trees and spotted with tinted flowers, not only do much to remove the idea of misery that surrounds a hospital for the insane, but they are really a part of the treatment of those whose misfortunes or the ravages of disease have caused their restraint in a house of this character; cut off from the pleasures and associations of the outer world, they must need to have their surroundings cheerful and beautiful to divert, attract, and interest. Well laid out and cultivated grounds afford an exercising space free from the idea of restraint that accompanies the usual airing court of an asylum.

Nature has given this locality a beautiful climate, the State has given

it appropriate buildings, and it is to be hoped that it will still further add to the good work by making such an appropriation as will enable us to improve the grounds to an extent that will add attractiveness to both. Efforts looking to the improvement of grounds have been hampered by building operations and lack of funds, but we will soon have a clear field, and with financial assistance will make the landscape worthy of the locality.

I would urge your Board to ask an appropriation of \$20,000 for improvement of grounds.

SEWERS.

The most carefully constructed buildings may become hotbeds of disease, if the means of disposing of its sewage are not good. Unfortunately, our system of sewerage is defective. Our main sewer is, at best, a temporary affair, an eight-inch pipe emptying into the nearest creek, and liable to give us trouble at any time. The proper solution of the sewerage question lies in the construction of a sewer to tide water near Alviso, or the erection of a furnace for its destruction by burning. I believe that it will require \$20,000 to construct a proper sewer to tide water, where it will give offense to no one. I am not at present able to speak definitely as to the cost of destroying our sewage by fire, but I have the subject under investigation.

I would suggest that the Legislature be asked to appropriate \$20,000 to perfect our sewerage system.

ADDITIONAL BUILDINGS.

Last, but not least, of our requirements, is an appropriation for the construction of two additional ward buildings. Lest it might seem that I am asking for additional room at a rather early date, permit me to set before your honorable Board some of the facts which tend to prove the necessity of erecting new buildings at this point, and at this time. Taking it for granted that all of our State Asylums are on pretty nearly the same general plane of excellence, as far as caring for the inmates and economy of administration are concerned, it follows that that asylum which is nearest the center of population from which the mass of the insane is supplied, and is therefore easier of access to both patients and relatives of patients, is in the end the most economical one for the taxpayer and the State.

The cost of transportation of insane to asylums amounts to fully \$30,000 a year, while the expense of visitation by friends and relatives of patients is often a serious item to the individual.

This asylum is located at a point within forty miles of a third of the population of the State. Within the last year, of the nine hundred and eleven patients committed to our State Asylums four hundred and seventy-nine were committed from points within forty miles of this institution. On the principle that that which is intended for the public good should be so fostered as to benefit the greater number, it would seem that an asylum so situated as to be easiest, quickest, and cheapest of access, should be enlarged from time to time as the needs of the public demand.

I am not unmindful of the fact that there are at present two new asylums now in course of construction in the northern and southern

parts of the State, but each of them have, so far as population is concerned, but a comparatively limited field to draw from.

Construction of buildings at this point will furnish the quickest and cheapest method of providing accommodation for patients. Estimating that two new ward buildings would cost \$175,000, and have a capacity of three hundred and sixty patients, they would be built at a cost not exceeding \$485 per patient, which is furnishing accommodation at a very small cost. We are enabled to do it thus cheaply by reason of having kitchen and outbuildings sufficiently large for an institution of three times our present capacity.

Confident that your Board will see the wisdom of increasing our capacity, I leave the matter in your hands.

In whatever way statistics may be read, or theories advanced, as to the increase or decrease of insanity, it is an indisputable fact that there is a gradual increase from year to year in our asylums of those who have to be cared for. That this is entirely due to a legitimate increase of new cases of insanity, is doubtful. The longer life of the insane when properly cared for, the committal of cases of nervous disease as insane, the increased confidence felt in the management of insane asylums, the facilities of travel, together with the accumulation of uncured cases, all tend to increase the number of those remaining in the institutions for the insane.

We may write and formulate ideas for the prevention of insanity, but the truth is, that the world is not ready to adopt the radical measures necessary to cut off the most prolific sources of supply.

For the sake of convenience, I present a summary of the appropriations needed for the ensuing two fiscal years:

Support	\$275,000 00
Improvement of grounds.....	20,000 00
Sewer to tide water.....	20,000 00
Two additional ward buildings.....	175,000 00
Total	\$490,000 00

ACKNOWLEDGMENTS.

I must express my acknowledgments to the officers and employes for their attention to the patients and fidelity in serving the best interests of the institution. With but few exceptions, they have all been faithful to their trust.

Dr. W. F. Pratt, the Senior Assistant Physician, is attentive, skillful, and active. Interested in his work, thoroughly identified with the welfare of the asylum, he has my hearty thanks for his well directed assistance.

Dr. Emily McBride Yeargain, the Junior Assistant, and the only female physician connected with the asylums of the State, finds a broad field of usefulness among the afflicted of her own sex; ministering to women with a woman's hand, she must needs carry comfort with her.

To our Steward, Mr. F. C. Young, I am indebted for his cordial cooperation in the economical management of the house.

Our efficient Secretary, Mr. E. R. Bailey, is always on hand, correct in his accounts, and attentive to his work.

To you, gentlemen of the Board, I must express my thanks for the

kind and generous manner in which you have treated me, your hearty response to my recommendations, and for the bestowal of that confidence which has been a stimulant to my work.

We are under obligations to the Rev. Dr. Snowden and Father Raggio, and others for their efforts in behalf of the spiritual welfare of our patients, and the following named publishers and others for books, periodicals, and newspapers gratuitously supplied:

Catholic Fathers, Santa Clara, papers and magazines; Mr. Bope, San José, papers and magazines; Mrs. J. Sullivan, San José, papers and magazines; San José Daily Times, San José; San José Daily Herald, San José; San Francisco Daily Call, San Francisco; E. H. Guppy, San José, magazines; Elma Glover, San José, magazines and papers; Daily Post, San Francisco; La Sociedad, San Francisco; A'Unia Portuguesa, San Francisco; La Voce del Popolo, San Francisco; La Italia, San Francisco; Le Franco Californien, San Francisco; Hotel Gazette, San Francisco; Staats Zeitung, San Francisco; Nord California Herald, San Francisco; Gilroy Gazette, Gilroy, California; Oakland Daily Tribune, Oakland, California; Oakland Daily Times, Oakland, California; Bulletin, San Francisco; Livermore Echo, Livermore, California; News Letter, San Francisco; City Argus, San Francisco; Foothill Weekly Tidings, Grass Valley, California; Biggs Argus, Biggs, California; Sutter County Farmer, Yuba City, California; Der California Volts Freund, San Francisco; Daily Times-Index, San Bernardino, California; California Journal Und Sontag Gast, San Francisco; Deutsche Zeitung, San Diego, California; Kern County Californian, Bakersfield, California; La Cronica, Los Angeles, California; Visalia Delta, Visalia, California; Le Progress, Los Angeles, California; Weekly Argus, Petaluma, California; La Republica, San Francisco; Watsonville Transcript, Watsonville, California; Evening Item, Martinez, California; Chronicle, Vallejo, California; West American Scientist, San Diego, California; Sun, Colusa, California; Weekly Independent, Santa Barbara, California; Rural Press, San Francisco; San Benito Advance, Hollister, California; Vestkutsen, San Francisco; Register, Napa, California; Yolo Mail, Woodland, California; Weekly Tribune, Los Angeles, California; Telegraph, Boston, Massachusetts; Detroit Free Press, Detroit, Michigan; Placer Argus, Placerville, California; Redwood City Democrat, Redwood City, California; Weekly Mail, Stockton, California; Lake County Avalanche, Lakeport, California; Breeder and Sportsman, San Francisco; Democrat, Santa Rosa, California; Wasp, San Francisco; Courier-Item, Santa Cruz, California; Callaway Gazette, Fulton, Missouri; Monroe County Appeal, Paris, Missouri; Chicagoer Sonntagshote, Chicago, Illinois; Weekly Mirror, Los Angeles California; New Era, Key West, Florida; Normal Index, San José, California; Pacific Pharos, College Park, San José, California; Evening Express, Los Angeles, California; New England Staten Zeitung, Boston, Massachusetts; Weekly Republican, Fresno, California; Press and Horticulturist, Riverside, California; Chronicle, Virginia City, Nevada; The Kentucky Citizen, Paris, Kentucky; Phoenix, Riverside, California; Journal of Commerce, San Francisco; Santa Clara Journal, Santa Clara, California; Brooklyn Blade, New York, New York; Signs of the Times, Oakland, California; Fire and Hammer, Portland, Oregon.

Very respectfully,

F. W. HATCH,
Medical Director.

APPENDIX.

APPENDICES.

NUMBER OF ADMISSIONS, RECOVERIES, DEATHS, ETC.

The following table shows the number of admissions, recoveries, discharges, deaths, elopements, number resident at close of each year, the increase of each year, whole number treated each year, and in the aggregate; also, the ratio of recoveries and deaths each year, and for the whole time from October 30, 1888, to July 1, 1890:

	October 30, 1888, to July 1, 1889.	July 1, 1889, to July 1, 1890.
Admissions	389	289
Recoveries	3	44
Discharges, uncured	5	28
Deaths	17	54
Escapes	1	1
Number resident at close of each year	365	527
Increase	365	183
Whole number treated	389	654
Per cent of recoveries to admissions77	15.23
Per cent of deaths on number treated	4.37	8.26

REPORT OF THE MEDICAL DIRECTOR

FOR THE YEAR ENDING JUNE 30, 1889.

To the honorable Board of Trustees of the State Insane Asylum at Agnews:

GENTLEMEN: I herewith submit to you my report for the year ending June 30, 1889.

ANNUAL SUMMARY.

The following summary shows the number of patients admitted, number under care and treatment, number discharged, eloped, died, and transferred during the year, and the number remaining in the asylum June 30, 1889:

FROM JUNE 30, 1888, TO JUNE 30, 1889.	Males.	Females.	Total.
Number of patients, June 30, 1888			
Number admitted during the year:			
By transfer from the Napa Asylum	116	61	177
By transfer from the Stockton Asylum	141	60	201
Number admitted on direct commitments	7	4	11
Whole number under care and treatment	264	125	389
Number discharged recovered	1	2	3
Number discharged improved	1	1	2
Number died	17		17
Number eloped	1		1
Number transferred to the Stockton Asylum	1		1
Number discharged, died, eloped, and transferred	21	3	24
Number remaining June 30, 1889	243	122	365

TABLE I.

REPORT OF THE MEDICAL DIRECTOR

FOR THE YEAR ENDING JUNE 30, 1890.

To the honorable Board of Trustees of the State Asylum at Agnews:

GENTLEMEN: I herewith submit to you my annual report for the year ending June 30, 1890.

ANNUAL SUMMARY.

The following summary exhibits the number of patients in the asylum June 30, 1889; number admitted, number under care and treatment, number discharged, eloped, and died during the year, and the number remaining in the asylum June 30, 1890:

FROM JUNE 30, 1889, TO JUNE 30, 1890.	Males.	Females.	Total.
Number of patients June 30, 1889.....	243	122	365
Number admitted during the year.....	202	87	289
Whole number under care and treatment.....	445	209	654
Number discharged recovered.....	32	12	44
Number discharged improved.....	16	4	20
Number discharged unimproved.....	5	2	7
Number discharged not insane.....	1	—	1
Number died.....	42	12	54
Number eloped.....	1	—	1
Discharged, died, and eloped.....	97	30	127
Number remaining June 30, 1890.....	348	179	527

TABLE I.

Showing the counties from which two hundred and eighty-nine patients were admitted from July 1, 1889, to July 1, 1890.

FIFTH ANNUAL REPORT

OF THE

BOARD OF TRUSTEES OF THE CALIFORNIA HOME

FOR THE

Care and Training of Feeble-Minded Children.

FOR THE YEAR 1889.

SACRAMENTO:

STATE OFFICE : : : J. D. YOUNG, SUPT. STATE PRINTING.

1889.

REPORT.

CALIFORNIA HOME FOR THE
CARE AND TRAINING OF FEEBLE-MINDED CHILDREN, }
SANTA CLARA, November 1, 1889. }

To his Excellency GOVERNOR WATERMAN, Governor of the State of California:

In compliance with and agreeably to the laws of the State of California, we respectfully herewith submit to you our annual report as Trustees of said institution.

For a detailed statement and all the necessary information required by statute, we respectfully refer you to the report of our Superintendent, Dr. A. E. Osborne, which is annexed hereto and made part hereof.

The health of the inmates during the past year has been good, and considerable progress made with many in their physical, mental, and educational condition. The number of inmates in the institution on the thirtieth day of June, 1889, being the end of the fiscal year, was one hundred and fourteen, and the number therein on the first day of November, 1889, was one hundred and eighteen, divided as follows: Boys, sixty-seven; girls, fifty-one.

As we have heretofore stated in our former reports, our capacity for accommodating those at present in the institution is very limited, and we are compelled, for want of room, to deny admission to the many applicants now seeking to get in, many of whom are urgent and necessary cases, and who should or ought to be provided for, but for want of room we are unable at present to provide accommodations for them. If we had to-day room sufficient, we could have in the institution over two hundred and fifty children. It is true, nothing can be done till the new buildings, on the new location lately selected by the Commission under the last legislative Act in reference to providing a permanent site for this institution, are built and completed. The Legislature of our State, at its last session, very wisely provided for an appropriation for a new site for this institution, under an Act "To provide a permanent site for the California Home for the Care and Training of Feeble-Minded Children," and to erect suitable buildings thereon. The Act provided for the selection and appointment, by your Excellency, of two citizens, who, with this Board of Trustees, were to form a Commission, whose duties were the selection and purchase of a suitable site or property for the future Home of this institution. Under this Act, your Excellency made two very wise appointments in the persons of Captain Oliver Eldridge and George W. Gibbs, Esq., citizens of San Francisco.

The primitive proceedings had and taken under this Commission were, when organized, to elect Mrs. Kate B. Lathrop President, and B. F. Le Warne Secretary. Subsequently notices for publication were prepared, wherein was fully detailed what was required to be specified by those having lands for sale, and to put in their bids to the Commission on a given day in said notice named. These notices were published in many of the newspapers in the different counties of the State, and the result was

that the Commission received one hundred and thirty-seven applications for sales of lands in the various counties of the State. Of these bids more than one half were rejected by the Commission as unworthy of considering, on the ground that they did not come up to the requirements of the law in many particulars. Some had less acreage than required, whilst others bid for prices far beyond our means allowed by law, and others were entirely too remote from travel communications, and devoid of the requirements set forth in our notices. Of the remaining bidders, which were considered, the Commission personally visited and inspected the most of them well and thoroughly, prompted and guided solely without any personal preferences or feelings of favor to any, but looking solely and only for the good and welfare of those children under our care, whose future and permanent home was to be wherever, in our wisdom, we may locate, and having, further, the interest of the people of the State in view, whose Trustees we were for that purpose. We finally selected and bargained for, with your Excellency's approval, what we considered the best offer made to us, and that is what is known as the William McPherson Hill rancho, or farm, situated at or near the town of Glen Ellen, Sonoma County, containing some one thousand six hundred and sixty acres of land, and for the low sum or price of \$50,000. It is needless for us to state that this place possesses all the requirements needed for an institution of this kind; for embraced within it is accessibility, climate, soil, timber, water, and, in fact, everything that is necessary for the purposes, and is well known to many of the people of our State as possessing all the merits we attribute to it.

As before stated, we have only at this time bargained for the purchase of the place at the price above named, the deed of the same being signed and in escrow with Tallant & Co., of San Francisco, to be taken by the State as soon as the purchase money is allowed by the Board of State Examiners and the Controller issues his warrant therefor. It is understood that if the deed pass to the State, that possession will be given by the first day of January next.

We hope in our next report to be able to report to you what progress we may make towards the erection of buildings on this property. We are having plans prepared of what, in our judgment, will be necessary for buildings for an institution like this, which no doubt will cost far in excess of the appropriation allowed for the purposes; but it is the desire and conclusion of the Trustees to proceed only so far as the appropriation allowed will carry them, and looking to the future Legislature for sufficient means to complete and furnish the same. These plans will all be submitted to the proper officers created by law, for their approval, before adoption by us.

We would respectfully call your Excellency's attention to that part of our Superintendent's report showing the expenses of supporting, maintaining, as well as educating the inmates per capita in an institution like this, given as they are in three different headings, and from which you can readily draw your conclusions and arrive at the proper expense of such in contra to like support and maintenance of inmates in other State institutions of a custodian character. It is to be observed that the expense for labor in an institution like this is far above that in other institutions of like character, arising from the fact that children or wards like those in an institution like this are almost helpless, requiring as they do a larger staff of attendants to look after their care, wants, and education.

In conclusion, we desire to express here our thanks to Captain Oliver Eldridge and George W. Gibbs, Esq., the Commissioners coöperating with us in this work, attending as they did well and faithfully all the meetings

of the Commission, and at all times cheerfully and willingly giving valuable and able counsel in our deliberations whenever requested. We also desire to thank your Excellency for the uniform kindness exhibited and the assistance rendered to us and the Commission in all our movements and undertakings so far in this most humane and charitable work.

Respectfully submitted.

MRS. KATHERINE B. LATHROP, President.
WILLIAM HARNEY.
CHAS. A. MURDOCK.
MRS. JULIA M. JUDAH.
J. W. FINDLAY.

REPORT OF THE SUPERINTENDENT.

SANTA CLARA, CAL., November 1, 1889.

To the Board of Trustees of the California Home for the Care and Training of Feeble-Minded Children:

MESDAMES AND SIRS: I herewith submit for your consideration, as required by the statutes of the State, my report of the operations of this institution for the fiscal year ending June 30, 1889. As another annual report will be made by the Superintendent to be incorporated with your biennial report to the Governor next year, before the convening of the Legislature, I have here omitted any special treatment of our work from a professional standpoint, believing that my comprehensive tables and statistics will be found sufficient to meet the desire of your honorable body at this time, and that the more exhaustive consideration of the medical aspect of our specialty will appear more apropos next year.

However, in addition to my tables, as presented to you in my semi-annual report of June 30, 1889, and herein quoted in full, I beg to add the following information:

The average monthly population of inmates for the year was one hundred and five and five sixths.

The average monthly expenditure for maintenance, including salaries, repairs, and the purchase of stock and fixtures, was \$2,222 16.

The average per capita monthly cost was therefore \$20 96; and the average daily per capita cost, 68 cents. If we include in the population the officers and all persons connected with the institution on pay, we have the daily per capita cost reduced to 54½ cents, and the monthly average per capita, \$16 43, showing a decrease in cost from previous years per capita per diem of 8¼ cents, with an increase of 20 per cent in our population.

In considering the per capita expense of this institution over other State institutions, one must not lose sight of the educational feature of the work. A larger staff must be maintained than is necessary for purely custodial care, in order that the inmates may be properly drilled, schooled, and trained. At the lowest calculation possible the school has cost, in salaries and supplies (and this does not include the salaries of such attendants as are doing training work as well as care of inmates), \$2,000 during the year. If this amount was deducted from the above figures we would have the monthly per capita cost, including only inmates, \$19 45½, and the daily per capita 64½ cents.

The per capita cost of maintenance alone, including expenses for living, clothing, etc., was only 21 cents. If we include feed for stock (\$1,112 68) and fuel (\$926 09), the per capita cost was 26 cents per day. If we include the salaries of all persons connected with the institution (\$12,353 94), the cost was 58 cents per day. The school salaries and supplies, however, amounted to \$2,000 per annum. If this be deducted, we have the cost per diem for care, etc., as 53 cents. It has been supposed that our cost per diem was high, but a comparison of our figures does not prove it, and it will not always do to take, without question or allowance, the per capita offered by other institutions in comparison, for the reason that there are

not probably two institutions whose tables are prepared in exactly the same way. It is by a comparison of the same classes of expenses that we can accurately demonstrate relative per capita expenses.

The following tables, showing daily costs, may be of interest, to wit:

Table 1.—Whole population for food and clothing, \$22 27, or 16½ cents per head.

Table 2.—General expenditures per day, exclusive of food, clothing, and salaries, as follows:

Feed for stock	\$3 05
Fuel (1¼ cents per head)	2 53
Administrative Department—expressage, postage, telegraphing, stationery, and school supplies	1 33
Traveling expenses (Trustees and Superintendent)	97
Light (including gas used in laundry for heating purposes, mangle, etc.)	90
Laundry expenses and repairs	1 06
Repairs and ordinary expense in and about the building, painting, glazing, and alterations	2 27
Farm expenses and purchase of stock	2 24
Furniture, hardware, and engine supplies	1 53
Insurance	1 00
Total	\$16 88

Table 3.—Salaries per day, as per the several departments, to wit:

School purposes	\$5 26
Farm and grounds	1 80
Laundry and water	3 45
Household and kitchen	3 78
Administration (including Executive, day and night attendants, office, etc.)	19 56
Total	\$33 85

Aggregate per diem:

Food and clothing	\$22 27
General expenditure	16 88
Salaries	33 85

Per day \$73 00

Farm Account.

Paid for feed for stock	\$1,112 68
Paid for fence lumber, repairs, implements, and fixtures	598 15
Paid for live stock	219 50

Total \$1,930 33

Received from Farm; Products, etc.

Milk, 23,049 quarts, value 7 cents	\$1,613 43
Eggs, 2,059, value 2½ cents	51 46
Pork, 1,163 pounds, value 10 cents	116 30
Veal, 85 pounds, value 10 cents	8 50
Chickens, 50, value 50 cents	25 00
Tomatoes, 109 boxes, value 50 cents	54 50
Potatoes, 4,771 pounds, value 1 cent	47 71
Corn, 876 ears, value 1 cent	8 76
Squash, 3,452, value 3 cents	103 56
Cabbage, 191 heads, value 5 cents	9 55
Cucumbers, 2,154, value 1 cent	21 34
Melons, 163, value 12½ cents	21 00
Radishes, 162 pounds, value 4 cents	6 48
Peas, 305 pounds, value 5 cents	15 25
Onions, 325 pounds, value 1 cent	3 25
Hay, 56 tons, value \$12	672 00

\$2,778 09

Deduct from this expense account, as above 1,930 33

Leaving balance in favor of farm \$847 76

In the above, no account has been taken of lettuce, young onions, beans, beets, etc.—a very considerable quantity of which was raised and consumed by the Home. Neither is any account taken of the young stock

(heifers and hogs) raised during the year. I estimate that the proper balance in favor of our farm should be \$1,000.

PRESENT POPULATION.

The present population (November 1, 1889) of the institution is: Inmates—Boys, sixty-seven; girls, fifty-one. Total, one hundred and eighteen. Their distribution by counties is as follows:

Alameda	17	San Diego	2
Butte	1	San Francisco	47
Calaveras	1	San Joaquin	1
Contra Costa	1	San Mateo	2
Fresno	1	Santa Barbara	2
Humboldt	2	Santa Clara	5
Lake	1	Santa Cruz	3
Los Angeles	5	Sonoma	2
Marin	1	Sutter	1
Monterey	1	Tulare	1
Napa	3	Ventura	4
Placer	1	Yolo	3
Sacramento	3	Hawaiian Islands	1
San Bernardino	4		
San Benito	2	Total	118

Respectfully submitted.

A. E. OSBORNE, M.D.,
Superintendent.

FINANCIAL REPORT.

SANTA CLARA, CALIFORNIA, July 31, 1889.

To the Board of Trustees California Home for Feeble-Minded Children:

I have the honor to submit herewith my semi-annual report of the financial transactions of this Institution. Included therewith will be found comprehensive tables covering the same transactions for the whole fiscal year ending June 30, 1889. These are made at this time for the purpose of enabling me to report the balances on my books, and to facilitate the auditing and expediting of my accounts with the Board of Trustees and the State, in complete adjustment of the transactions under the various appropriations made for the two years concluding with the fortieth fiscal year as above.

The following recapitulation of disbursements for the thirty-ninth and fortieth fiscal years I quote from my report to your Board for the month of June, 1889, which same is now on file:

For Maintenance.

Total disbursement for maintenance for the thirty-ninth fiscal year, ending June 30, 1888.....	\$25,342 39
Total disbursement for maintenance for the fortieth fiscal year, ending June 30, 1889.....	26,666 01
Add deficiency claims (thirty-eighth fiscal year).....	\$52,008 40
	10,921 34
Balance lapsing to the State.....	\$62,929 74
	170 26
Amount of appropriation	\$63,100 00

For Improvements.

Disbursements—thirty-ninth fiscal year.....	\$17,269 18
Disbursements—fortieth fiscal year.....	4,600 95
Total	\$21,870 13
Balance unexpended and lapsing to State.....	3,129 87
The total appropriation being.....	\$25,000 00
Unexpended balances being—From maintenance appropriation.....	\$170 26
From maintenance (deficiency reserve).....	10,921 34
From improvement appropriation.....	3,129 87
Total	\$14,221 47

The average monthly expenses for maintenance for the thirty-ninth fiscal year was	\$2,127 42½
The average monthly expenses for maintenance for the fortieth fiscal year was	2,222 16½
Average monthly excess for fortieth fiscal year.....	\$94 74½
The average monthly expense under improvement appropriation was for the thirty-ninth fiscal year.....	\$1,439 09½
The average monthly expense under improvement appropriation for the fortieth fiscal year.....	383 41½

Semi-annual Statistics.

Total expenses for maintenance half year ending December 31, 1888.....	\$12,474 17
Total expenses for maintenance half year ending June 30, 1889.....	14,191 84
[See schedule A]	\$26,666 01

Total expenses from appropriation for improvements for half fiscal year ending December 31, 1888	\$2,165 26
Total expenses from appropriation for improvements for half fiscal year ending June 30, 1889.....	2,435 69

Movement of Population.

Population of inmates, January 1, 1889	106
Population of staff (including all persons on payroll)	26
Total	132
Admissions, January 1, 1889, to June 30, 1889	9
Discharged, January 1, 1889, to June 30, 1889.....	1
Total population inmates, June 30, 1889	114
Total population staff, June 30, 1889	28
Gross population.....	142
Gross excess of population over January 1, 1889.....	10
Gross excess of population for year over June 30, 1888.....	21
Applications, July 1, 1888, to January 1, 1889, 35; admitted, 11; remaining... ..	24
Applications, January 1, 1889, to June 30, 1889, 42; admitted, 4; remaining... ..	38
Total for the year..... 77; admitted, 15; remaining... ..	62
Inmates, June 30, 1888:	
Males	50
Females.....	43
Total	93
Inmates, June 30, 1889:	
Males	66
Females.....	48
Total	114

Following will be found the tables in full referred to. Also exhibit of Christmas Fund account, showing a cash balance on hand of \$9 60.

All of which is respectfully submitted.

(Signed:)

A. E. OSBORNE, M.D.,
Superintendent.

SANTA CLARA, CALIFORNIA, July 31, 1889.

To the Board of Trustees of the California Home for the Care and Training of Feeble-Minded Children:

The undersigned, your Auditing and Finance Committee, respectfully report that they have carefully examined the accounts and books of the Superintendent, and all and every transaction done and acted by him for the fiscal year ending June 30, 1889; and that we find the same correct, and the balances agreeing with those in the hands of the Treasurer and in his own hands at present. All agreeably to the reports hereto annexed and made part hereof.

We further certify that the books and accounts are well and admirably kept, and creditable to the officers of the institution, the Superintendent, Dr. Osborne, and the Clerk, Mr. Knapp.

Respectfully submitted.

(Signed:)

MRS. KATHERINE B. LATHROP,
President.

WILLIAM HARNEY.
CHARLES A. MURDOCK.

SIXTH ANNUAL REPORT

OF THE

BOARD OF TRUSTEES OF THE CALIFORNIA HOME

FOR

The Care and Training of Feeble-Minded Children.

FOR THE YEAR 1890.

SACRAMENTO:

STATE OFFICE, : : : : : J. D. YOUNG, SUPT. STATE PRINTING.
1890.

REPORT.

CALIFORNIA HOME FOR THE
CARE AND TRAINING OF FEEBLE-MINDED CHILDREN, }
SANTA CLARA, October 1, 1890.

To his Excellency R. W. WATERMAN, Governor of the State of California:

GOVERNOR: In compliance with the laws of the State of California, we respectfully herewith submit to you our annual report as Trustees of of said institution.

We beg to refer you to the report of our Superintendent, Dr. A. E. Osborne, which is hereto annexed and made part hereof, for a detailed statement, which discloses all the requisite and necessary information required by statute governing in such matters, for your information and consideration.

The number of inmates in the institution on the thirtieth day of June, 1890, being the end of the fiscal year, was one hundred and twenty-five, divided as follows: Boys, sixty-nine; girls, fifty-six.

The total number of applications for admission amounts to several hundred. (See Superintendent's report.)

Again we beg leave to state that, owing to the crowded condition of the capacity of the institution in its present situation, we find it impossible to admit any more of the large number, as shown above, committed and applying to us for shelter, till we are relieved by the early completion of the new buildings on the recently acquired site near Glen Ellen, Sonoma County. When these buildings are erected and ready for occupancy, we will then be enabled to overcome the pressing claims on us to admit a large number of those already committed to us, and as much as possible meet the constant applications for admission from all parts of our State.

The sanitary condition of the institution during the year has been good—free from epidemic, and no illness, only such as is always incident to feeble children.

The great and most absorbing interest manifested by the Board of Trustees since the filing with you of our last report centers in the new site, recently acquired by purchase, near Glen Ellen, Sonoma County; a description, and all matters pertaining to it, we have in our last report laid before you. Since the filing of that report we have acquired the property, which embraces, as we have formerly stated, some one thousand six hundred and sixty acres of land, and for the sum of \$50,000, and its title having been duly examined, was passed upon as good and valid by the proper authority, the Attorney-General of our State, and possession given to us in the early part of last January. We desire to state that the sum of \$1,000 was generously donated to the Board of Trustees, for the use and benefit of the children, by Guy E. Grosse and J. E. Peters, the gentlemen from whom the property was purchased.

We regret to state we found this newly acquired property in a bad state of preservation. The place had been allowed to run down very

much in the past, particularly the orchards and vineyards, which were in such an uncultivated condition that, if allowed to remain so much longer, would render the same perishable, and of not much value for any future profit therefrom. This, together with the dilapidated condition of the fences surrounding the land, rendered it almost useless for that purpose. The dwelling house on the place, and the outhouses, all needed renovation for habitation. All those matters attracted our attention and consideration to place the same in as good condition as our means would permit, believing that in due time a source of revenue will be derived from the orchards and vineyards, and the farm generally, which will accrue to the benefit of the State. We had the orchards and vineyards thoroughly cultivated, and the trees and vines properly pruned, the dwelling house renovated, repaired, and furnished for habitation, all the outhouses put in as good order as possible, and the fences repaired as far as we could do so at present, and many other matters necessary to be done in and about the place. All these improvements entailed an expense of \$8,344 24, and the detailed items of disbursements for the same will be found in the report of the Superintendent, hereto annexed, to which we respectfully refer you.

We were long in deciding upon the form and details for the first building to be erected, delayed by our inclination to obtain all the necessary information and observations of other buildings suitable for an institution of this character. We secured plans and photographs of other and kindred institutions from various places in the United States, to aid and guide us in our judgment in adopting the best plan possible for this, our primitive institution on this coast, so as to meet all the wants and comforts, as well as all the requirements necessary for the inmates who are to permanently reside there in the future, and not going any further in the size and extent of the building, only as the limited means at our disposal would permit or allow, so that hereafter the full and complete buildings necessary and required (to meet the wants of the large number who are seeking admission to the same) can be allied to it without any impediments in the way for that purpose.

The plans and specifications for this new building were prepared by our architects, Messrs. Copeland & Pierce, and after a thorough inspection and consideration of the same on our part, met with our approval, as well as the approval of the State Board created for that duty. The proposals for bids, agreeably to the plans and specifications adopted, were advertised by us, as by law required, and the award or contract given to Mr. Andrew McElroy, of San Francisco, who was the lowest responsible bidder. Mr. McElroy immediately filed his bond and entered into contract with us to perform the erection and completion of the building. This latter also met the approval of the State authorities.

The contractor very shortly after commenced work on the place, excavating for foundations and the putting of the concrete foundations required, and the work of erecting the building now in progress, under the constant inspection of M. F. Redmond, a competent and highly recommended builder employed by us for that purpose, who, together with our architects, oversees that the contract is faithfully and well complied with, in all manner of materials used therein, and as our laws require in such matters. Our President and members of the Board of Trustees also watch the progress of the work from time to time. We are in

hopes that by the early part of the coming year to be able to find the building completed, so as to enable us to remove the children thither from their present location, for permanent residence.

We are also about to erect a much needed and necessary building as an adjunct to this main building, to be used and occupied by all cases of an epileptic character. We find from experience that such a habitation, separate and apart from the main building containing the milder form of cases, is not only requisite, but indispensable for the good and welfare of the institution. We are also, as far as our means will permit, about erecting a reservoir for the reception of water; the latter we have on the place in abundance, and of good quality, and to be conducted from a source of springs on the premises by pipes to the reservoir, giving to us sufficient fall to answer all purposes; and, further, to have a proper system of sewerage created, and such other requisites that may be found necessary and essential in and about the place, in as economical and workmanlike manner as the limited means at our disposal will permit. It will be seen that the total revenue to the State derived from our farm during the year amounts to the sum of \$3,138 40; less expenditures for labor, live stock, feeding thereof, plowing and seeding, \$1,520 11. It is expected that at our newly acquired property near Glen Ellen to be able to derive an income therefrom, which will be a source of revenue to the State, bearing in mind that at first considerable outlay is expected to place the property in a condition to derive a profit therefrom.

We beg leave to call your Excellency's attention to the appropriation allowed us by the last Legislature for the purposes of purchasing a new site and the erection of suitable buildings thereon. The sum appropriated was \$170,000, from which the sum of \$50,000 was expended in the purchase of the new site, and the balance—\$120,000—to be expended on the buildings. From this latter sum, some \$5,000 were expended in architect's salaries, attorney's fees, traveling expenses in search of a location, advertising, etc., leaving the sum of \$115,000 wherewith to defray expenses for the buildings now in course of erection, and from which other expenses are to be met, other than those for the buildings proper. With such a limited sum at our disposal we were only enabled to proceed to build but a portion of the contemplated buildings we required, agreeably to our plans adopted. These consist of laundry, bakery, kitchen, and dining-room building, together with a building adjacent for epileptic cases, capable only of accommodating from two hundred to three hundred inmates, necessary officers and attendants. We have at present one hundred and fifty inmates, officers, and attendants, and two hundred and thirty applications or commitments for admission on file. These, together with the additional applications constantly made to us from all parts of our State, and more applications that in the future we may reasonably expect, clearly shows beyond a doubt that the present buildings in course of erection will be very limited in capacity to accommodate or meet the wants of such a large number seeking admission therein. We therefore submit, under these existing facts, that the new buildings under our original plans should be erected as soon as possible, and which will be capable to meet the wants and accommodate all who seek admission. To complete the buildings proper, agreeably to the plans adopted, and in addition to those now in course of erection, we need what is known as an administration building, with two wings thereto—one for

boys and one for girls, and a boiler and engine room. The estimated cost of such, from a careful estimate submitted to us by our architects, will amount to about \$300,000. This will include the cost of radiators and heaters, as well as gas fixtures complete, with the additional sum of \$15,000 to furnish and supply the same for habitation. We deem the fences surrounding the property of no use, entirely worn out, and incapable of resisting an encroachment from cattle, and believe with an appropriation of \$15,000 we can surround the same (nearly 1,700 acres) with a good, substantial fence, also with inner cross-fences required, together with improving this valuable land and premises, which it needs very much, and thereby render it capable to become a source of revenue to the State, arising to a considerable extent from the labor of its inmates, believing that many of such who are physically able will be taught to labor on the farm, and in such other pursuits that will have a tendency to promote their usefulness and sanitary condition.

We desire to express to your Excellency our sincere thanks for the many acts of kindness, as well as the voluntary aid rendered us from time to time by you, and we believe you will find it a consolation, as well as a pride, in the future, that you had, in connection with your co-laborers in such work (ourselves), assisted to your utmost one of the most deserving of all charities, and aided in founding and building a shelter forever for those poor unfortunate and helpless of our human family.

All of which we respectfully submit.

KATHERINE B. LATHROP.

REPORT.

SANTA CLARA, CAL., October 1, 1890.

To the Board of Trustees of the California Home for the Care and Training of Feeble-Minded Children:

MESDAMES AND SIRS: In accordance with the requirements of the law, and of your Board, I have the honor to submit herewith the following as and for my annual report of the operations of this institution for the fiscal year ending June 30, 1890, together with certain addenda brought down to October 1, 1890, which last are properly noted as they occur:

TABLE 1—MOVEMENT OF POPULATION FOR INMATES.

	Males.	Females.	Total.
Census of July 1, 1889.....	66	48	114
Admissions, July 1, 1889, to June 30, 1890.....	6	10	16
Total for year.....	72	58	130
Discharged.....	2	2	4
Died.....	1	8	9
Total to be deducted.....	3	10	13
Census of July 1, 1890.....	69	48	117
Admissions, July 1, 1890, to October 1, 1890.....	2	8	10
Total.....	71	56	127
Died.....	1		1
Present population (October 1, 1890).....	70	56	126

Of this last number there are domiciled—

At Santa Clara—Males.....	63
Females.....	53
Total.....	116
At new site, Sonoma County—Males.....	6
Females.....	3
Total.....	9
At home on leave—Males.....	1
Total.....	126

Inmates Discharged.—Two males and two females were discharged during the year; of these, a few words are not amiss:

E. B., male, had been under our care two years and six months. When admitted he knew little or nothing of the ordinary school work, owing to his self-appreciation of his own defection, coupled with a sensitive disposition, that prevented him from obtaining any benefit from public or even private school instruction. His age was eight and a half years

at admission; he was in good physical health; was willing to learn, but bashful and diffident, and easily discouraged. He had never spoken, and could make only futile attempts at articulation. His memory appeared good and his perceptive faculties fair. On examination it was found that he possessed a certain malformation of the mouth and palatine arch that interposed an anatomical barrier to clear enunciation and precluded perfect speech. Great pains were taken, however, with his instruction, and particular stress was laid upon those lines of training that seemed to us best calculated to call out the fullest expressions of his mental forces, and at the same time increase his reliance upon and confidence in self-efforts. Under the painstaking drill of our teachers and attendants the work succeeded—slowly at first, then more rapidly, and at last proceeded far beyond the expectations of most of us, who realized how he was handicapped. At this stage of his development his family took him from the Home and placed him in the schools of their city, where he has since distinguished himself as a diligent and capable student, of average grade. We were very sorry to part with him (believing that still greater results might be accomplished with him), notwithstanding the fact that we realized he would be to the people of the State a forcible, tangible, positive evidence of the value of the educational benefits of the Home, and prove by living testimony, that cannot be attacked, what can be done with children of his class. His recovered speech, alone, should forever silence the stale rantings of "doubting Thomases," who have opposed the claims of the feeble-minded, and belittled the very efforts that saved this boy. The results of our investigations into his progress since leaving the Home justifies us in declaring the improvement to be permanent. The chasm of imbecility has been spanned, and he has passed over to the bright land of an intellectual promise. In this instance, there arises strongly in our mind the oft-quoted and veritably prophetic utterance of the late Jas. B. Richards, in his remarkable story of the rescue of the idiot boy "Sylvanus": *"If we can redeem one," I said to Dr. Howe, "we will redeem them all over the country. We will open the doors so wide that every State shall pass an Act to found an institution for these unfortunates; and every intelligent being shall feel that it is a privilege to enter into this great work!"* The following record of this case I find upon the pages of our "Record of School Progress and Training." The initials affixed are those of the teachers under whose care he was placed:

November 1, 1887 (eleven months after admission)—"Is always attentive and diligent. In writing is always careful to follow copy, and has just written his first letter. Is doing nicely in kindergarten, and making rapid progress."—M. L. P.

December 1, 1887—"Reading in the First Reader. Cannot speak the words very distinctly, but is improving. Spells words of three and four letters. Is very faithful with his work, and ready to attempt anything required of him. Is now learning the multiplication table—writes the table of two's perfectly."—M. L. P.

January 1, 1888—"Department good. Has made perceptible improvement in reading. Articulates more distinctly, can add simple numbers readily, but has not yet learned to 'carry.' In articulation has learned the sound of 'ch,' can give the correct sound of the letter 'u,' and has learned other vowel sounds. In writing is also doing well."—E. W. P.

February, 1888—"Continues doing well in all classes. During the past month has made good progress in numeration. In articulation has learned all the vowel sounds and is trying to put the parts of words together. Has mastered the letter 'h,' and, in fact, can give the sounds of nearly all the letters of the alphabet."—E. W. P.

"Is doing well in calisthenics. Has learned to use the chisel with both hands in wood carving, and is improving as rapidly as can be expected."—A. B. W.

September, 1888, to April, 1889—"Was in my class in arithmetic from September to January; was working in addition and doing nicely. In January came to me in reading and in writing. Doing well."—A. E. J.

July, 1888, to April, 1889—"Was in my First Reader class until January, 1889. Up to that time made excellent progress. During same period was also in my kindergarten classes, and accomplished a great deal of good work. Can sew elaborate patterns, fold paper accurately and neatly; can follow almost any pattern in weaving. Has made good progress in articulation; is always ready to repeat a sound as many times as required day after day until he gets it. Can repeat sentences of eight or nine words without assistance, and makes an effort to talk with me in class. In arithmetic he endeavors to get 100 every day, which is given him if he adds the long examples without a single mistake. He is now about ready to take up subtraction. Is neat, systematic, attentive, and industrious in all school work."—E. W. Peck.

We close this remarkably satisfactory record with a copy of a letter written by him in July last to the teacher whose conscientious efforts were most responsible for his development. We wish we could reproduce the handwriting, which is quite good, legible, and characteristic, and we omit only the address:

—, CAL., July 13, 1890.

DEAR MISS PECK: I thought I would write to you and ask how all of the boys, girls, and teachers are out to the Home, as I have not had a chance to go out as the horse is out to pasture and I have no way to go.

I am out on my vacation now. I was promoted into the sixth grade, and I am getting along very well at school. Sometimes I beat the drum for the boys to march in by.

It has been very warm here for a few days.

I have a good deal of work to do at home, as I help the girls about the house.

I guess I will close, as I have nothing more to say this time, and will be pleased to hear from any of the teachers and children. Give my love to all.

Yours as ever,

E—B—.

The other discharge from our Boys' Department was that of F—S—, aged nineteen years. This was a high grade case, of peculiar nervous endowment, whose previous life had been characterized chiefly by erratic and passionate exhibitions of eccentricities. There had been an almost continuous history of chorea, which was quite marked on admission. He was a boy of highly honorable disposition and intentions, anxious to please and do right, but with so weak a self-restraining power within himself, that, without the sympathy and support of a stronger person, it was the easiest thing in the world for him to go wrong. He remained with us a year, continuing under physical, as well as mental treatment, and then left us to enter a school in the southern part of the State, preparatory to entering business. His subsequent course has been lost sight of, but we believe it to have continued satisfactory, as promised, or we would, in all probability, have been advised to the contrary.

The history of the discharges from the Girls' Department are not so flattering.

The first, A—R—, aged ten and one half years, was a confirmed epileptic of aggravated condition, whose retention in the Home had been greatly beneficial but not curative. She was with us nearly two years. During that time her disease had been placed under fair control, so that the spasms became less severe, and for awhile, less frequent. Towards the latter part of the time they consisted of temporary loss of consciousness, without falling or the exhibition of any contortion of face or body. Her epileptic record affords an interesting study, the consideration of which, however, may not be of special import in this connection. We introduce the following figures to show the irregular course of her disease.

Her papers stated, on admission, that she was subject to spasms at irregular intervals, but frequently to the extent of four or five a day. She was admitted in August, 1887, and her treatment was begun at once, with the following results:

September, 1887	Four spasms.
October, 1887	Two spasms.
November, 1887, to July, 1888, a period of eight months	No spasms.
July, 1888	Thirty spasms.
August, 1888	Thirty-four spasms.
September, 1888	Three spasms.
October, 1888	Nine spasms.
November, 1888	Twenty spasms.
December, 1888	Thirty-five spasms.
January, 1889	Twelve spasms.
February, 1889	Ten spasms.
March, 1889	Nine spasms.
April, 1889	Fifteen spasms.
May, 1889	Ten spasms.
June, 1889	Two spasms.
July, 1889	No spasms—discharged.

Her former irascible temper improved almost to the point of total disappearance. She kept fairly well along with her studies, and had her physique kept pace with her mental improvement, she would have become a marked case. As it was, her family considered her sufficiently improved to be kept at home, and we have heard of no unfavorable report since her discharge.

The last discharge was that of S—G—, aged twenty-seven years, an imbecile girl of lower grade, who was with us a year only. The utter neglect of any previous training, such as was suitable to her condition, made it a hard matter for us to do much for her in the short time she was with us. She had long passed the age at which school duties promised much reformation, and there were left only a few industrial pursuits suitable to her condition of mind and body. Subject to hallucinations; with a garrulous disposition, and possessed of sufficient intelligence to artfully formulate and shrewdly execute mischievous schemes, she was manifestly a dangerous person for any community outside of an institution, and a continued source of irritation inside of one. From circumstances over which we had no control, she was retained at home after the expiration of a certain leave of absence granted her. As a host of applicants were clamoring at our doors for admission, we could not, in manifest justice to these, retain her place, and her bed was given in consequence to another, even more in need of our care. That the career of S—G— since her discharge has been an unfortunate one, is evidenced by the fact that she was, a couple of months back, arrested, brought before Commissioners in Lunacy, adjudged insane (?), and formally committed to the State Asylum at Napa. The fact, incidentally, points to one of two conditions, both of which are of vital consequence to us as specialists in this particular field. Either she retrograded so rapidly after having been sustained a year by our methods that her retention by her family was little short of criminal negligence, or else Commissioners in Lunacy still fail to discriminate between the actually insane and the feeble-minded only.

TABLE 2—DEATHS, JULY 1, 1889, TO OCTOBER 1, 1890.

CAUSES.	Males.	Females.	Total.
Epilepsy		2	2
Acute mania		1	1
Meningitis		2	2
Sequelæ, following measles	1	2	3
Progressive (general) atrophy	1	1	2
Totals	2	8	10

An Epidemic of Measles.—In the month of April last there appeared the first epidemic that the institution has known. Considering the number of our family, the tendency of their inherited or acquired weaknesses towards all diseases peculiar to the massing of human beings, and the risks of communication through our daily contact with the outside world, the long immunity of the Home from even the ordinary diseases of childhood is really remarkable. It has been, to all of us, a source of self-congratulation. During the past winter and spring measles existed throughout the valley and in the neighboring towns, and precautions were taken to guard against its introduction in the institution. The disease finally gained an entrance by being communicated by an attendant in the Girls' Department, who, a few days after her employment, was taken down with a hybrid form of the disease. She was at once isolated, and all precautions possible were adopted to prevent the spread of the affection. Our efforts were fruitless, however—one after another were taken down until nearly half our number were in bed. Lacking hospital facilities, the cases were treated in the general dormitories. The treatment in general was purely a sustaining one, with special regard to complications. The frequent unctions over the whole body of warm and pure olive oil proved particularly soothing, and resulted in marked benefit to the patient. The deaths noted resulted from secondary causes in children of very feeble constitutions, who succumbed to the strain much as they would have succumbed to any unusual and exhausting tax upon their frail vitality. The usual cases of bronchial irritation and inflamed eyes supervened, with more or less persistency.

TABLE 3—MOVEMENT AND SEX OF POPULATION OF INMATES, BY COUNTIES, ETC., JULY 1, 1888, TO OCTOBER 1, 1890.

COUNTIES.	July 1, 1888.	Admitted.	Discharged.	Died.	October 1, 1890.	Sex—October 1, 1890.	
						Males.	Females.
Alameda	12	5	1	2	14	11	3
Butte	1	0	0	0	1	0	1
Calaveras	0	1	0	0	1	1	0
Contra Costa	1	0	0	0	1	1	0
El Dorado	0	1	0	0	1	0	1
Fresno	1	0	0	0	1	1	0
Humboldt	1	1	0	0	2	1	1
Lake	1	0	0	0	1	1	0
Los Angeles	6	2	0	1	7	4	3
Marin	1	0	0	0	1	0	1
Monterey	1	0	0	0	1	0	1
Napa	2	0	0	0	2	0	2
Nevada	0	2	0	0	2	1	1
Placer	0	2	1	0	1	1	0
Sacramento	0	4	0	0	4	2	2
San Bernardino	2	2	0	0	4	4	0
San Benito	1	1	0	0	2	2	0
San Diego	0	4	2	0	2	1	1
San Francisco	37	23	4	3	53	23	30
San Joaquin	1	0	0	0	1	0	1
San Mateo	2	0	0	0	2	1	1
Santa Barbara	1	1	0	0	2	2	0
Santa Clara	8	2	2	2	6	4	2
Santa Cruz	1	3	1	2	1	1	0
Shasta	1	0	1	0	0	0	0
Sonoma	0	2	0	0	2	1	1
Stanislaus	1	0	0	1	0	0	0
Sutter	1	0	0	0	1	1	0
Solano	1	0	1	0	0	0	0
Tehama	1	0	1	0	0	0	0
Tulare	1	0	0	0	1	0	1
Ventura	2	2	0	0	4	3	1
Yolo	3	0	0	0	3	2	1
State at large	1	0	0	0	1	0	1
Hawaiian Islands	1	0	0	0	1	1	0
Totals	93	58	14	11	126	70	56

From the above it will be seen that the bay counties of Sonoma, Contra Costa, Alameda, Santa Clara, San Mateo, Marin, and San Francisco supply over 62 per cent of the population, and San Francisco alone over 42 per cent. San Francisco and Alameda Counties are represented by over 53 per cent of the inmates. Our applications now on file would vary these figures but little if they were included, but would place Los Angeles and the southern counties third in the list.

TABLE 4—THE CAUSES OF FEEBLE-MINDEDNESS.

So far as we have been able to ascertain from the incomplete histories obtainable in most cases, the causation of feeble-mindedness may be tabulated as follows:

KNOWN OR PRESUMED CAUSE.	Males.	Females.	Total.
Accidents and diseases of infancy:			
Convulsions	6	1	7
Cholera infantum	1	1	2
Falls	2	2	4
Measles	2	2	4
Partial drowning	1	1	2
Scarlet fever	1	1	2
Sickness, severe and prolonged	2	2	4
Congenital	27	22	49
Epilepsy	7	8	15
Epilepsy, with paralysis	1	1	2
Epilepsy, following meningitis	1	1	2
Epilepsy, following whooping-cough	1	1	2
Epilepsy, from use of tobacco and masturbation	1	1	2
Panama fever	1	1	2
Paralysis, general	1	1	2
Paralysis from fall	1	1	2
Paralysis, infantile	1	1	2
Relating to pregnancy:			
Accident to mother	1	1	2
Administration of chloroform to mother during dental operation	1	1	2
Maternal impressions	1	1	2
Injuries received at birth	1	1	2
Physical and mental strain of mother	1	1	2
Premature birth (paralysis)	1	1	2
Shock to mother (grief, etc.)	1	2	3
Shock to mother (fright)	2	2	4
Relating to parental conditions:			
Alcoholism of parents	1	1	2
Feeble-minded father	1	1	2
Illness of parent at conception	1	1	2
Insanity of parents	2	2	4
Kinship of parents	1	1	2
Syphilis of parents	2	2	4
Relating to brain lesions:			
Inflammation of brain	2	2	4
Hydrocephalus	2	2	4
Meningitis (from accident)	1	1	2
Meningitis (basilar)	1	1	2
Shock to nervous system through retarded pubescence	1	1	2
Sunstroke	1	1	2
Totals	70	56	126

In the above table the term "Congenital" is used to denote all those causes, more or less obscure, operating at or about the time of birth, as well as those immediately preceding it. The matter of heredity plays an important part in causation, and we regret we cannot designate in a clearer way the effect of parental vices, and the violation of laws—moral as well as hygienic—that a just God will surely hold accountable for many of these dwarfed and crippled bodies and blighted minds. It is a significant fact that over 16 per cent of all under our care (including idiots) are epileptic. This does not include, however, those who of right belong to the epileptoid family of diseases. Were these to be included the percentage would be much larger. Over 19 per cent are epileptic and paralytic. Over 38 per cent are congenital. Over 16 per cent resulted from the accidents and diseases incident to infancy. Over 11

per cent were caused by troubles experienced during the pregnant state—over one half of them representing shocks and frights. What an unwritten history of mother's woes these statistics disclose! Over 7 per cent from depraved conditions of the mind and body of the parents previous to conception, represents but a part of the unfortunates—were the truth fully known—who have been brought into the world sinless and yet with the livid brand of sin upon them. Moralists and reformers can here find much material for lay sermons.

TABLE 5—AGES OF INMATES.

AGES.	Males.	Females.	Total.

TABLE 7—ORDINARY SCHOOL AND INDUSTRIAL DETAILS.

DETAILS, OCTOBER 1, 1890.	Males.	Females.	Total.
On farm.....	4		4
On garden and grounds.....	1		1
Absent on leave.....	1		1
In laundry.....	1	4	5
In school.....			
With cook.....	1		1
In infirmary.....	7		7
In dormitories.....	12	8	20
Chamber work.....		3	3
Sewing classes.....		15	15
Fancy work (see Table 8). With janitor.....	4		4
Dining-rooms.....		8	8
Totals.....	31	38	69

The above table must not be taken as indicating the only number able to work, according to the occupations indicated. Our purpose has been to train all the inmates, so far as they may be physically and mentally able, to some light, suitable, pleasing, and, at the same time, practical work, in order to stimulate them to, and to prepare them for, greater duties and responsibilities. The general working detail varies from day to day in numbers, and no one day's roster can truly reflect the correct industrial ability of our children. The following illustration will indicate more clearly the practical side of our training. Inmates have been trained to fill, and now do satisfactorily fill, the following positions at the saving of salaries indicated:

Gardening, etc., formerly filled by paid labor.....	\$25 00 per month.
Cook's helper, formerly filled by paid labor.....	20 00 per month.
Chamber work.....	20 00 per month.
Dining-room care, etc., formerly filled by paid labor.....	50 00 per month.
Laundry work.....	60 00 per month.
General house work, assistance.....	50 00 per month.
Baker's assistance, etc.,.....	15 00 per month.
Value of boys' assistance at Gelston.....	50 00 per month.
Value of girls' assistance at Gelston.....	50 00 per month.
	\$340 00 per month.

We believe these figures below rather than over the mark, and have purposely placed them low to offset any possible criticism as to the character of the quality of assistance rendered, in comparison with paid labor. To many, the statement that the value of the work of our children is over \$4,000 per year, based upon current rates for paid service, may appear as a surprising affirmation. To those who are, however, familiar with the work, and believe as we do, that under proper conditions a part of our children may be trained to very largely support the other part, there will be occasioned no surprise, but a pure gratification that our Home has made, thus early in its existence, such valuable progress towards the practical realization of some of our assertions. Let it be further borne in mind that the above estimate does not include the value of the work of our children in the sewing classes, fancy and ornamental work, and the assistance of a few advanced in the school-room, without which it would be necessary for us to employ paid service for the work done.

TABLE 8—SCHOOL ROSTER.

The following table will be of interest, as exhibiting the studies pursued, and the number in each class:

STUDIES.	Boys.	Girls.	Total.
Alphabet	12	7	19
Arithmetic—Numbers	18	13	31
Addition to fractions	9	9	18
Fractions	1		1
Articulation—First efforts	2	2	4
Pronouncing in one syllable	2		2
Short sentences	3	1	4
Art and Decorative Work—Crocheting		5	5

TABLE 9—DONATIONS—JULY 1, 1889, TO JUNE 30, 1890.

July, 1889.

A. R. Woodams, Santa Clara: Two boxes of peaches.
B. Hicks, Santa Clara: Twelve fans.
Miss Peck, Institution: Large picture book.
Pennsylvania Training School for Feeble-Minded Children, Elwyn, Pa.: Twenty-four pillow shams, with worked designs.
Mrs. Katherine B. Lathrop, President: Large assortment of neckties for boys, and beads for girls.
M. Morgenthau, San Francisco: One box (gross) white toilet soap.
Jos. Sanders, Superintendent California Industrial Home for the Adult Blind: Lot of brooms and brushes.

August, 1889.

Mrs. A. McDonald, San José: One dozen fancy picture cards, one fancy cardboard cross, one package transfer pictures, two linen collars, and one package of beads.
Miss Peck, Institution: One white skirt (for C. H.).
Mr. A. R. Woodams, Santa Clara: One box of peaches, two boxes prunes, one box egg plums, and one box choice plums.
The Misses Pierce, Santa Clara: Large quantity (wagon load) of pears.

September, 1889.

The Misses Pierce, Santa Clara: Two wagon loads of pears.
Mr. A. R. Woodams, Santa Clara: One box table grapes.
Miss L. Brey, Santa Clara: One sacque.
Mrs. K. B. Lathrop, President: Four large, framed pictures.

October, 1889.

Mrs. H. M. Jessup, San Francisco: Nine linen collars.
Mr. A. R. Woodams, Santa Clara: Two boxes grapes.
Mr. Albert Harris, Santa Clara: One box quinces and several boxes apples.
Pennsylvania Training School for Feeble-Minded Children, Elwyn, Pa.: Six hammocks.

November, 1889.

Mrs. H. L. Dodge, San Francisco: Quantity of boys' clothing, and large box of shells and curios from Mexico.
Mr. A. R. Woodams, Santa Clara: One box dried apricots.
Mrs. E. A. Yard, Santa Clara: Several boxes of table grapes.
Mrs. K. B. Lathrop, President: Fifty pounds of candy.

December, 1889.

Special, and applied to Christmas Fund. (See Table 12.)

January, 1890.

Mr. S. C. Higgins, Santa Cruz: Girls' clothing.
Mr. W. C. Badleau, Monrovia: Girls' clothing.
Mr. S. H. Knapp, Institution: Boys' clothing.
Mr. W. G. Brown, San Francisco: Package of pictures.

February, 1890.

Mrs. A. L. Brewer, San Mateo: Two bolts of ribbon for girls.
Mrs. K. B. Lathrop, President: One linen tablecover.
Mrs. S. D. Baker, Virginia City, Nevada: Half dozen assorted remnants of baby ribbon, twenty-four bundles zephyr, six paper embroidery patterns, one white apron, one perforated motto, fifty-four skeins of silk, one package silk scraps, two pieces silver board, one and a half yards mohair cloth, ten pieces canvas, one outlined splashier, five pattern books.

March, 1890.

Mrs. — Campbell, Sonoma City: Quantity of children's clothing.
Mrs. K. B. Lathrop, President: Eight vases (for Gelston).

April, 1890.

Mrs. S. D. Baker, Virginia City, Nevada: One package of yarn, one white apron.
Mrs. George F. Taylor, San Francisco: Quantity of girls' clothing.
Mrs. George Hamilton, Oakland: Quantity of girls' clothing.
Mrs. K. B. Lathrop, President: Eight vases, two decanters (for Gelston).

May, 1890.

Mrs. A. J. Snodgrass, Ventura: Quantity cards, toys, and picture books.
Miss Carrie Warburton, Santa Clara: Quantity flowers and toys.
Mrs. A. M. Moore, San Francisco: Several unbound volumes of "Harper's Magazine," and illustrated papers.

Mrs. K. B. Lathrop, President: Forty yards outing flannel for girls' dresses, two packages tooth powder, one sewing machine, one tidy, paper and papering one room (for Gelston).

June, 1890.

Loyal Legion, Santa Clara: Picture cards and flowers.
Mrs. A. M. Moore, San Francisco: One box of books.
Mrs. K. B. Lathrop, President: Fifty pounds of candy.

TABLE 10—EXHIBIT OF WORK DONE BY SEAMSTRESS AND SEWING CLASSES FOR YEAR ENDING JUNE 30, 1890.

ARTICLES.	Number.
Aprons	69
Basque	1
Bed pads	20
Bed spreads	24
Bed ticks	60
Blankets (hemmed)	12
Blouses	3
Bureau cover	1
Camisoles	7
Chemises	2
Clothes bags	14
Combination suits	12
Curtains	21
Doylies	7
Drawers (pairs)	85
Dresses	46
Embroidered altar cloths	2
Flannel sacques	5
Flannel skirts	14
Handkerchief case	1
Iron holders	28
Mattresses (renovated, and restitched, and tied)	45
Mattresses (stitched)	9
Napkins (cotton flannel)	171
Napkins (linen, etc.)	158
Nightgowns	29
Nightshirts	3
Outlining	14
Pillow	1
Pillow cases	254
Plain hemming	39
Shams outlined	2
Sheets	183
Stand cover	1
Suits (boys' ordinary)	1
Suits (boys' "Pinafore")	12
Table cloths	25
Table scarf	1
Tea towels	35
Towels	363
Waists	5
Window shades	37
Total	1,811

Besides the above, there were one hundred and thirty-four days devoted to patching, mending, and general repairs—an average of over eleven days each month. The table does not, further, include the large quantity of fancy work, knitting, sewing, embroidery, outlining, etc., done for the holiday season, and for which the months of November and December were largely taken. This exhibit was especially meritorious both as to variety and quantity, and served practically to demonstrate in a pleasing way the handicraft of the children in those lines of work.

The present instruction in hand and machine sewing is designed to

be preparatory to the formation of a class of seamstresses and tailors, who, hereafter, under the direction of a competent forewoman, shall do the mending and the making for the whole institution. The utilization of inmates of this class for these and other pursuits in the institution should not be contrasted with the labor in the same line of regular artisans. In the latter instance it is the result of competition in the struggle for existence, in which the best skill commands the best pay. In the former case it is the utilization of what otherwise would be not only waste elements of society, but also consuming, destructive elements, without any compensation for the destruction or consumption. In this light, therefore, any practical results attained must necessarily be considered as profit—profit to mind and soul, as well as from hands.

TABLE 11—PER DIEM AVERAGES OF COST OF MAINTENANCE, ETC., FISCAL YEAR.

MONTH.	Total Expenditure.	Per Diem Expense.	Per Diem Average of Inmates.	Per Diem Cost per Inmate.	Per Diem Average of Population, Includes Staff.	Per Diem Cost—Whole Population.
1889—July	\$3,087 04	\$99 55	112	\$0 88	142	\$0 70
August	3,605 81	116 31	117	99	152	76
September	2,822 42	94 08	117	80	148	63
October	2,764 03	89 11	118	75	150	59
November	2,936 22	97 67	119	82	150	65
December	2,415 87	77 93	118	66	149	52
1890—January	2,300 50	74 21	120	61	151	49
February	2,470 70	88 24	120	73	151	58
March	1,790 64	57 76	119	48	145	40
April	1,989 56	66 31	115	57	143	46
May	1,942 98	62 67	115	54	141	43
June	2,248 44	74 94	116	64	143	52
Averages	\$2,531 18	\$83 23	117	\$0 70	147	\$0 56

A comparison of the above table with our statistics for 1887 and 1888 will show that our per capita expense has been greatly reduced. The figures above include certain items of extraordinary expense that ought not to be included in computation of maintenance, but are instead items of equipment, furnishing, and building. As will be seen elsewhere among the financial tables, the principal items of extraordinary expense were:

Work on cleaning cesspools	\$100 00
Purchase of stock	200 00
Insurance	146 94
Sinking well at laundry	258 63
Erection and equipage of bakery	1,012 49
Other extraordinary expenses	450 00

Amounting in all to \$2,168 06

Deducting this amount, we have, on comparison, the result as shown below :

YEAR.	Average Monthly Expense.	Average per Diem Cost.	Per Diem Average of Inmates.	Per Diem Cost per Inmate.	Average Whole Population.	Average Cost per Whole Population.
1887-1888	\$2,128 25	\$69 75	87	\$0 80	109	\$0 63
1889-1890 (in full)	2,531 18	83 23	117	70	147	56
1889-1890 (extra expense excepted)	2,350 51	76 43	117	65	147	52

In considering the per capita expense of this institution, in comparison with other institutions, the educational feature of the work and its consequent additional cost, over care that is purely custodial, must not be lost sight of, but duly computed. A larger staff must be maintained than would be required for simply custodial purposes, and in order that the children may be properly drilled, schooled, and trained to useful habits, the salaries for these additions to the general staff must be sufficient to properly recompense for the said tact, experience, and quality of ability furnished. Besides, the general armamentarium of a school—books, maps, apparatus, furniture, etc., must be provided at a certain yearly outlay. It was never designed, even from the beginning of the work, that our specialty should be classed or managed on lines parallel to the simple custody of the insane, for instance, nor has it been ever expected by the leaders in the work that it could be carried on quite as cheaply per capita.

TABLE 12—CONTRIBUTIONS (OTHER THAN CASH) TO CHRISTMAS FUND—1889.

Goodyear Rubber Co., San Francisco: Five rattles, thirty-one balls, two rings, two bird images (all rubber).
 Maurice O'Brien, San José: One box (fifty pounds) candy.
 Messrs. Will & Finck, San Francisco: Two large picture books, one small picture book, two toy animals, one dissected (toy card) house, two toy bureaus for dolls, one box agate marbles, four assorted horns, popgun, two musical (toy) instruments, two whirling jacks, one pair bones, three wooden toys, one toy village, one box animals and birds, one large horn, two large dolls, two kaleidoscopes.
 Messrs. G. Verdier & Co. (City of Paris), San Francisco: Eight pairs colored stockings (ladies'), one dozen assorted handkerchiefs, eight dress patterns, assorted fabrics.
 Mrs. Rosa Valente, San Francisco (special gift): One tin boat.
 Sherwood & Sherwood, San Francisco: One dozen 2-pound glass jars of jams.
 George Beaver, Santa Clara: One bushel walnuts and one bag of dried fruit.
 William H. Haydock, San Francisco: Eleven books (picture), six rubber balls.
 George A. Hamilton, Oakland: One medium sized doll, one small doll, one fancy basket, three handkerchiefs, bag of candy (special gift); two books (picture), three small dolls (institution gift).

The expenditures from our Christmas Fund have afforded us the means of supplying our children, not alone at "Christmas times," when abundance of all that gladdened the heart prevailed, but also pretty generally throughout the year, with toys, games, candy, ice cream, entertainments of various sorts, rewards of merit, gifts for progress and behavior, etc. The existence of the fund has been a source of untold delight, while to many it has brought creature comforts that have been thoroughly appreciated.

MISCELLANEOUS.

A SILVER MEDAL.—Last spring our children prepared an exhibit of their school and industrial work, for the International Exposition at Paris. The exhibit consisted of school examination papers in geography, history, elementary and higher arithmetic, penmanship, spelling, drawing, etc., and specimens of work in repoussé, knitting, hand and machine sewing, outlining, embroidery, some articles of hand-made clothing, and quite an elaborate kindergarten display, prettily mounted in books specially for the occasion. The exhibit was forwarded with many misgivings on the part of our children—the distance seemed so great, the idea of competing with the whole world so novel and strange, the fear of finer, handsomer, and larger displays from the other institutions, overshadowing their modest efforts, all combined to render the outcome problematical. Indeed, some of these fears were shared by the older heads in the institution, but it was thought best to show what we were doing and to prepare as good an exhibit as our children's training permitted, trusting to the kindness of the officials of the exposition to give the same as favorable a display as its merits warranted. First came the good word that the United States Superintendent of Exhibits had received the articles safely; next that they had arrived safely in Paris and would be taken care of, and then after quite a long silence a request transmitted through the American Superintendent that they be donated to the National Library of France and the National Pedagogic Museum, which request, of course, was granted.

The next that was heard regarding our exhibit was the information conveyed in the following letter:

1825 FIFTH AVENUE, Troy, N. Y.

Superintendent Home for Feeble-Minded Children, Santa Clara, Cal.:

DEAR SIR: At the Paris Exposition your exhibit was awarded a "silver medal," which will reach you through Department of State in due time.

The reporter of the jury which made the award has, by some accident, failed to receive reports, etc., which I left for him, and which are necessary for his report. I am collecting duplicate set to send to him. If you will soon send me your last report and any other desirable information I will much appreciate the favor.

Yours respectfully,

C. WELLMAN PARKS,
U. S. Superintendent, etc., Paris Exposition, 1889.—Per M.

There has been great rejoicing in the Home over this announcement, in which, again, older heads have shared the children's feelings. To secure so distinguished honors at an international exposition in a foreign country, is to have our work recognized on somewhat of an international basis, elevated above ordinary effort, and as an educational feature, as a branch of the great educational system of the world, sustained and extolled. To our institution it means more than any passing notice of the fact can possibly describe. Young in years, but strong in the faith, believing in our own works and confident that all elements of society must ultimately recognize the value and sustain the liberal education of the feeble-minded, the California Home has set its hand to the plow and will endeavor in the future, as it has attempted in the past, to lay the furrow full, deep, and straight in the fallow field it has preëmpted for its labors. To every friend of the Home the success of our exhibit will afford joy, and we doubt not that a responsive throb of State pride will quicken the pulses of even those who have heretofore doubted the utility of our work, and were more or less arrayed against us. We believe in the rights of the minority, and even our opponents have the right to demand facts and the evidences of practical results to sustain our theories and the promises we have made. The development of the intellectual faculties of our children, evidenced by their school and industrial work, are the best practical results that can be offered to demonstrate the correctness of our theories; and a silver medal from a world's competition, which must have come strictly as a reward of merit, is certainly a solid fact. A few more such facts and practical results and there will be no longer any opposition of which to demand an "unconditional surrender."

AUXILIARY STAFF (BENEFICIARIES).—The establishment of what we have at least temporarily called an "auxiliary staff," from among our inmates, marks, we believe, one of the most important steps that our Home has ever taken. This corps is composed of youths who have been under training for longer or shorter periods in the Home, and have made such proficiency in self-care, general education, and industrial ability, as to enable them to successfully fill important positions in the Home. In doing this they are not supplemental to paid labor, but supplant it. This will in the near future result in a very great retrenchment of wages.

The dining-rooms, three in number, officers', attendants', and children's, are under the charge of one of our girls, as a leader, who has a corps of eight other girls to assist, and all under the supervision of the Matron. The work here consists in sweeping, dusting, keeping floors in order, washing paints and windows, attending to the setting of the tables, the

washing and wiping of the dishes, cutting bread, scouring knives and forks, waiting on tables, attending to the desserts, care of cook's pantry, and of milk pantry, receiving, measuring, and keeping an account of the milk, skimming, care of all milk pans and cans, preparation and distribution of the morning lunch for children, ringing of the daily order of bells, sweeping porches and walks about the household, and waiting on door at main entrance.

The cook's assistant prepares all vegetables, attends to the fuel and fires, keeps the kitchen and kitchen store-room in order, and in all other respects fully attends to the usual duties of such a position.

The baker's assistant attends to the oven and fuel, has care of the bakery, assists in the preparation of articles to be baked, attends to the stores and delivers bread, etc.

CHILDREN'S ENTERTAINMENTS.—The usual entertainments on the various holidays and at stated periods between, have been continued throughout the year. For these delightful changes in the routine life of our children the balance carried over from the Christmas Fund has been drawn upon according to the original intention. In this connection the permanent stage erected in the Boys' Pavilion has been a valuable accessory. These entertainments, sometimes by the officers and sometimes by the children alone, we propose to continue. We look upon the play as one of the most valuable of all the aids available for the education of this class. It is object teaching extended to life lines, while at the same time it affords amusement, and thus impresses through the agency of the latter information and instruction upon their senses in an almost unconscious manner. We trust, and, on behalf of those who will be so greatly benefited by it, we plead, that in the completion of the plant now being erected at Gelston special pains will be taken to provide liberally in this direction. It is a matter no less important than the provision for school and class-rooms.

CENSUS OF THE FEEBLE-MINDED IN THE STATE.—We have been unable to obtain the census of the feeble-minded in California for 1890; but from what we know personally of the questionable system adopted for taking it, we are inclined to the assurance that whatever the figures shall be found to be, they will fall far short of the actual number. From a rather extensive correspondence over the State we have learned of the difficulty encountered in collecting accurate statistics; but we have ascertained that there exists a very large class of those unfortunates for whom no application for admission into this institution has been made. Some of the parents of these did not know of the existence of the Home. Some considered it a sort of branch of the insane asylums. Others, through false ideas of the proprieties involved, prefer to keep their children at home, and still others have made no application because of the known fact that we would not be able at this time, and probably might not be able for some time to come, to admit these cases if they did apply.

There were one hundred and forty-six applications filed with us from July 1, 1889, to October 1, 1890, but these do not include the whole number that came to our knowledge.

THE SCOPE AND STATUS OF OUR WORK.—We are still convinced that much confusion of terms and many errors of opinion yet exist in the public mind—professional as well as lay—regarding the proper scope and status of our work. This state of affairs bears directly upon the subject of applications on the one hand, and the Home's extension on the other. We meet many people who express surprise upon being informed of our true status, and whose belief had previously been that the design of the institution was to provide a custodial home for idiots only. There are others again who think of us as maintaining some sort of adjunct to the insane asylums, while most people, not specially informed, underestimate the school and training features, upon which our choicest hopes are based, and which are really our distinguishing features from other lines of asylum work. It will sound strange to those acquainted with the institution for us to assert that we frequently meet people who urge the necessity of some sort of State care for the epileptics and weak-minded paralytics, not knowing that we have from the beginning cared for these so far as our means and accommodations would admit, are now caring for a large number of them, and have already under way at Gelston a unique building for their special care and treatment. Our speciality is so new to this coast that it seems much effort is required to set us right before the masses. In view of this state of affairs, therefore, it may not be amiss for us to dwell a moment upon the consideration of some of the points involved.

The term "feeble-minded" is used in a generic sense, and is designed to embrace all the grades of "mental obliquity," of intellectual weakness, of loss of brain function, of whatever kind and from whatever source, and of general abnormality of the brain and its functions through the various mental processes, associated or not with physical disease, and not otherwise coming under the generic head of insane. It is of wide range, as this discloses, and may include the whole field of mental alienation not assumed by the subject of pronounced insanity. Between its extremes it may embrace every known phase of nervous disease, pathological change, and biological condition. The gradations pass, by almost insensible degree, from the unmistakably feeble-minded to the unmistakably insane, but in practice, as a rule, little difficulty need be experienced in determining the exact status of each case. In this connection, it is proper for us to say that our work is neither supplemental to the care of the insane nor dependent upon it. It stands as independent of it as any special form of education stands independent of custodial care or hospital treatment without educational effort. There appears no reason why the two lines of work should not harmoniously blend, one with the other, in most, if not in all, practical particulars, for they are handmaidens in the same beneficent cause of succoring a distressed humanity. It would scarcely be fair to assert that they are parallel efforts. To express it rather tersely, the work of our asylums for the insane is principally to care for a diseased condition fully established, supervening upon other conditions of more or less pronounced sanity—to deal with an effect.

The special province of the Home for the Feeble-Minded is to deal with the incipient aberration of the mental processes—*striking at the cause!* It is possible for the care of the feeble-minded to lessen the existence of insanity to an astonishing extent—perhaps one half or more. From the nature of the prime conditions involved, the care of the pronounced

insane can never lessen the ranks of the feeble-minded, and is capable of preventing imbecility only to a minimum degree by the occasional removal of the element of parentage. Had the care for the feeble-minded originated and kept pace with the care for the insane in this State, there would have been to-day fewer of the latter class to care for. Another thought occurs to us in this relation. Asylums for the insane have been erected because of *manifestations* foreboding evil to the senses or the property of society—not to remove a great fundamental *cause* of disease. Society dreads most what it sees and hears, and nurses the illusion that what is not specially demonstrative is not immediately dangerous. There can be no greater fallacy. If all lunatics were undemonstrative, public apathy would be as indifferent to their isolation and rational treatment as it has been towards the care and education of the purely feeble-minded. As it is, the imbecile boy or girl of fair face and innocent manner, stands fewer chances of State aid than the driveling idiot of misshapen form. Although they may need it more than the latter, the very hideousness of the latter's condition gives him an advantage over the former, and he is more quickly provided for.

This institution would remove from society the *cause*, so far as possible to do so. In this sense, then, we may be pardoned for considering the specialty as in advance of most other forms of correctional charity. Taking this view of it the care for the insane becomes supplemental to our own work—the last refuge for cases of hopeless mental change and weakness culled from the general mass of defectives as unfit or unable for consociate education—the "Court of last appeal!"

But, some will say, all insane are not children, nor are all cases chronic—as might be inferred from the foregoing—what of these? We admit the truth of the assertion, and reply by stating the simple fact that in the vast majority of cases insanity is hereditary from a previously vitiated stock, perhaps unrecognized as an insane condition, but closely allied to it if not identical with it, and comes sooner or later in life to those who are the offspring of feeble-minded parents, or else it is acquired through some of the vices of our civilization, coupled with the wasting errors of life. The seed that is sown by a grandfather may not germinate until a grandchild furnish the proper conditions for its development, and only in his children's children may it bring forth abundant fruit after its own kind. We think it safe to assert that in every case of so called insanity there is a first, or probationary stage of feeble-mindedness—the stage of incubation, so to speak. This stage may be of any duration, from an hour or less to a year or more. That it should not be recognized is no evidence that it does not exist.

The term "for Children," used in connection with our work, is a relic of its origin in the eastern United States, but has become quite obsolete of late years, except in a titular sense. In many of the States the words "for Children" have given way to the words "for Youth," or have been left out of the title altogether. We trust the latter will eventually become the case in California, where the Legislature—quite from the beginning—has opened wide our doors to all ages, thus placing our Home on a line with advanced thought in this relation.

Were all cases of mental disease first placed in a proper department of a Home for the Feeble-Minded during the stage of mental enfeeblement designated above, as the "stage of incubation, or probation," it follows as an axiomatic sequence that fewer would find their way to the

asylums than do under the present system. It is not contended that all would be cured, though it is hoped that such a course would prove beneficial to most and work no injustice nor hardship to any. This must not be construed as reflecting upon any other asylum. From my personal knowledge of those in this State they are all that money, skill, and kindness can make them. It does, however, bear upon the fact that the asylums have been grossly overcrowded, preventing proper classification, imperiling the self-sacrificing labors of the managements, and calling forth protests from the latter in no uncertain voice.

Before there could be completed what might be called the "Overflow Asylum" at Agnews, it was thought necessary to reestablish it as a General Receiving Asylum, instead of "Hospital for the Chronic Insane," as was originally intended, and also to establish two other asylums of very considerable size, one north and one south, making five in the State equal to the accommodation of thousands of the insane, while accommodation for only a baker's dozen or so of feeble-minded persons had been provided. The wisdom of the last Legislature, however, promises to give our work for all time the generous support and the extension it justly needs. Thus, it will be seen, that the true province of a Home for the Feeble-Minded is to deal with cases before they reach the stage calling for asylum retention, as well as to provide a shelter for the purely feeble in mind, the congenitally idiotic, the epileptic, and the paralytic of feeble mind.

There are cases of juvenile insanity differing from the adult forms mainly in those particulars consequent upon the juvenile condition of life; but do the masses recognize this class, and do our asylums provide special accommodations for them? Do the asylums possess the facilities for treating them in all respects as modern society demands children shall be treated apart from adult defectives? Does any one acquainted with the facts advocate the continued incarceration of juveniles, even though violently insane, intermingled with adults of the same or a more dangerous class? We have had several applications from the officers of the asylums to take children now in their care, and known to be either feeble-minded, idiotic, or otherwise demented, and for whom the asylums afford no proper seclusion.

There can be no question that their continued association with the kind of adults they are thrown with is detrimental to their best interests, and scarcely permits of a hope for their restoration or advancement in any degree. The State law debar the admission of idiots into the insane asylums, and justly; and as it follows as a consequence that this institution must be provided with the means for the rational care of idiots in separate buildings from the imbecile grades, we also deem it proper that the State make additional provision in our asylum department for the custody of the juvenile insane—at least until such time as childhood is passed.

CLASSIFICATION.—We submit the following classification based upon that of Dr. I. N. Kerlin, who for over thirty years has been the successful head of the Pennsylvania Institution for the Care and Training of Feeble-Minded Children. This institution shelters over eight hundred of all grades, and affords unrivaled facilities for the formation of authoritative opinion:

Idiots: 1. Unteachable—Chiefly characterized by the exhibition of the vegetative functions. 2. Teachable—Vegetative, plus a modicum of mind permitting imitation; limited correlative action of two or more of the five senses; memory.

Idio-imbeciles: A type higher in endowments than "teachable idiots"; of mixed characteristics, susceptible of considerable training in simple, uncomplicated lines, and often capable of self-help and light work.

Imbeciles: Usually subdivided into low, middle, and high grades, to denote relative development; susceptible of marked improvement in all educational and manual (industrial) pursuits; made up of many sub-types, the highest of which is the purely feeble-minded; includes in their proper relation, kleptomaniacs, pyromaniacs, moral imbeciles, etc.

Juvenile insanity has already been spoken of.

Epilepsy complicates all these grades, while the epileptoid dyscrasia may be the hidden, subtle spring from whence arises the ego of the majority of our mischievous, erratic, or criminal members of the defective and delinquent classes, whether recognized as "imbecilic" or not. This question is one of such grave importance in its economic and politic, as well as its correctional phases, that we deem it a just duty to throw against it with all the penetration at our command the strong red light of professional warning.

We once heard it asserted by a prominent member of a State Legislature, in speaking of State appropriations for various charities, that "there are appropriations we *may* make, and there are appropriations we *must* make." Referring to the "fact" (?) that the insane must be provided for whether other grades of mental defect and disease were looked after or not. This is in the same illogical vein of reasoning that I once heard advanced on a similar occasion, viz.: That the insane must be provided for before any other class can be considered, "because they are dangerous to any community. The rights of the individual demanded that his life and property shall be protected *as what the cost may be*. Other defectives, who are not so dangerous, can be tolerated, etc., as in the past." Hence it would appear that fear of personal injury or proprietary loss is the motive power that most generally speeds the wheels of legislative action in these matters. The obligation of organized society is to relieve distressed parents of their feeble offspring, to prevent the physical and moral ruin of imbecile girls, and the development of the criminal in boys. The fitness of these things had not been considered, apparently, by these people, since these were the things an appropriation *might* be made for, to again quote their language. The prayers of a sorrow-shadowed family; the tears of anguished parents, goaded to desperation by the incubus of imbecility, with perhaps the horrors of poverty as the background; the plaintive appeals of virtue, beset by temptation, and left unsupported; all these were as a feather in the balance of their sense of justice, compared to the (to them) crushing weight of the argument of one maniac running "amuck" in the community.

Thanks to the advancement of the age, society has grown too rich, too strong, too kind, too compassionate, too humane, to longer tolerate in any community with neglectful indifference, that abject wretch of days gone by, "the village fool." Merciful men and women extend to the half-witted a full measure of their pity and protection. The infirmities or eccentricities of the demented are no longer the subject of brutal jest without rebuke. The world has found that it is not only the just and proper thing to do, but that it pays to expend time, energy, and money to undertake the cure of what, in the absence of remedial effort, becomes an ever spreading, pestilential, malodorous sore. But let us see if there,

is no risk to person or property in allowing unrestricted liberty to some who are manifestly feeble-minded, while their more demonstrative kinsmen in disease—the insane—are quickly sequestered behind locks and bars.

The *Epileptic* at large, is, almost without the possibility of an exception, to the household and the community, an unknown factor for trouble. So far as their vagaries are understood by the public to be responsible for breaches of the law and of the peace, they are not only an unknown, but must, in many cases, remain an unknowable quantity, and for the reasons about to be given.

The unvarying trend of the epileptic disease, when unchecked or untreated, is to the goal of imbecility or the graver manias associated with true insanity, notwithstanding the rather misleading statement of Dr. Jas. W. Walk before the National Conference of Charities and Correction, in Baltimore, in May last, viz.: that "some of the most distinguished men, from Julius Cæsar down, have been epileptics."

Without entering upon the consideration of the pathology of the disease, we pass to what bears more particularly upon the assertion we have made. The psychological peculiarities are marked. One of the first symptoms to be noted is the obtunding of the finer sentiments and moralities, followed by the progressive depravity of those feelings which constitute the chief glory of a normal human being's moral and spiritual nature. Epilepsy, even before the outward expressions of the face and the spasm are noted, affects the ethics of character, and insidiously calls into action the meaner and baser forces of the victim's being. Deception takes the place of truth and candor. Petty vices crowd out the restraining sense of the moral obligation and opens the door for criminal intent. Cruelties of a minor sort afford a strange satisfaction, and the repulsive things of life may be gloated over, may be, withal, in secret, with a horrible fascination for details. So subtle, so gradual, the change from the normally right to the radically wrong, that we are not apt to recognize it, or, if recognized, to ascribe it to other causes and fail to comprehend its terrible significance. Most often the true meaning of it all is revealed to us only after some breach of prominence is made and the depraved state of the mind is exposed. The victim, at least at first, is not a willing agent to the commission of these vices. He first repels "the still small voice" that, in the innermost recesses of his being suggests the committing of wrong, and cunningly supplies a plausible cover for the act, and an escape from the consequences. But the repetition of the temptation brings him under the spell of the serpent's eye and fills him with a consuming curiosity to do the bidding of his unwelcome guest. He is as one tormented by invisible demons, who goad him to desperation if he attempts to refuse their solicitation, and who gloat over his ruin when he yields. The next chapter of this distressing story may disclose so pronounced a loss of the moral sense and responsibility that the victim now revels in the open commission of every known phase of crime that vulgarity, obscenity, hypocrisy, and general depravity can suggest.

Long before this stage is reached, however, his influence for evil in the community may have worked untold mischief. Because he is the unwilling and often unconscious agent of his own wrong doing, is the most palpable reason why he should be feared. The hidden nature of his propensities makes him to be dreaded as one always dreads an unseen

foe. It is the element of uncertainty concerning all his acts that renders him so dangerous an element in society. Each case will present phases peculiar to that case, and the only law applicable is, apparently, the law of contraries. The individual becomes markedly that which he was not before, though it is possible, of course, to find predominating traits spasmodically exaggerated. He becomes that which it was not his desire or constitutional intent to be. This stage of his hopeless progress may not be characterized by the more familiar expressions of the disease, the convulsive signs. The stage of rapidly repeated convulsions, although usually introductory to the final act of the drama, lessens the danger to himself and others, by calling for and securing some sort of remedial restraint or seclusion.

The final state of the hopelessly afflicted victim is most miserable; language fails to fully describe the chamber of horrors in which his mind is entombed; the most vivid fancy falls short of the just conception of the intensity of his mental anguish. At times conscious of his gradual breaking up, his struggles to avert his impending doom are as frantic as they are futile; and as the aura again creeps over him his despairing cry and piteous gaze are simply heartrending. He is vacillated twixt hopes and fears, and his life becomes a fitful succession of physical pain, mental torture, and the most unreasonable hope of recovery from his distressing condition. He is as a blighted leaf prematurely shaken from off its stem from among the thousand leaves of life's early summer, to be caught up ere it touches mother earth and hurled hither and thither in the ever eddying winds of conflicting forces, to lie quivering at last in the fence corner of some remedial or correctional retreat until Nature's final dissolution kindly removes the object from our sight.

Were it possible to cause to pass before society's gaze the hidden causes of most theft, of intrigue, of conspiracy, of assault—even of arson and of murder—society would stand aghast at the revelation of the number actuated, not by the innate depravity of the individual *per se* to be corrected by the various penalties and incarceration in jails, or by the taking of life—radical cure that the latter is—but by *epilepsy* in some of its protean manifestations, to be corrected by rational treatment and continued retention in hospitals and asylums suitable for this class. The medical literature of the day records numerous cases of suddenly developed mania in epileptics and those afflicted with allied disorders. Sometimes they appear to be developed almost instantaneously, as on the street, for instance, and the first luckless person met may be the recipient of the epileptic's fury. A case illustrative of this occurred not long since in an eastern city. A business man consulted a physician for a certain nervous affection. The doctor diagnosed incipient epilepsy, and as mildly as he dared prepared the man for future treatment. The patient was permitted, at his own urgent request, we believe, to return home alone, the intention being to secure next day quarters in some safe retreat for his further care. On the way home, without a moment's warning, the epileptic explosion occurred, and a stranger who was passing was knocked down and brutally assaulted.

Dr. C. M. Hay, of the New Jersey State Asylum for Insane, in the "Journal of Nervous and Mental Disease" (Vol. 14, p. 374), thus describes the attack of a patient (a woman) under his care: "Suddenly starting from any employment at which she may be engaged, the patient utters a piercing scream and begins to run wildly up and down, with

wide open, staring eyes and dilated pupils. Any obstruction is overcome, and while in this state the woman is a marvel of strength; almost incredible stories being related by her attendants of her prowess. On one occasion she utterly demolished a partition of strong boards, and on another she wrenched away a settee on which a number of persons were sitting, and then dashed it down in a wreck and continued her flight." Hundreds of similar cases might be added if it were worth the while.

At the usually accepted ratio of two epileptics per thousand of population (which, by the way, we consider far below the average), there are about one hundred and thirty thousand epileptics in the United States. The number suffering from the epileptoid group of diseases may never be accurately computed, but the figures are certainly high. He, then, who would assert that the epileptic is a harmless and insignificant element in our population, reckons without his host. Dr. Fred. Peterson, of New York, is authority for the statement that there are over twelve thousand of these in the State of New York alone, and he gives only three hundred as the number cared for by the leading institutions outside of almshouses. What a startling condition of affairs this statement discloses! The following resumé of cases under our care in this institution may serve to throw some additional light upon the epileptic state for those who may not have given the matter any special thought.

An officer reports to us a certain child for repeated and apparently uncontrollable outbursts of temper, disobedience, foul language, inciting other children to acts of destruction and open rebellion; perhaps some windows have been broken, while a record of having been getting "bad" for some days is presented, with the commentary that "he is worse now than ever." We examine him taken in the act of some irregularity. The eyes are staring or glaring with a singular expression. The pulse is irregular, also the breathing. A doggedness of purpose, together with a certain unmistakable, but not easily defined, stupidity, betrays the epileptic state. We question him. He either admits his guilt and cunningly fabricates excuses, or else persistently falsifies with an abandon that is remarkable, even in the teeth of the most positive evidence to the contrary. To his mind, no evidence is convincing excepting that framed by his own words. We caution him, plead with him, exact promises. His answers may or may not be all that is desired. We send him to his work, or school-room, or play-yard. The trouble is repeated, perhaps in an aggravated form. We send him to bed to insure rest and quietness, and to remove him from sources of irritation in his inflamed, nervous state. A series of epileptic seizures completes the story, and after a few days he rises weak, perhaps in both body and mind, yet withal relieved, penitent, and refreshed.

A girl is reported for continued foulness of tongue and reprehensible acts. She worries the Matron with her waywardness, and seems unable to grasp the sense of the Matron's efforts to restrain her. Counsel, coaxing, bribes, shaming, all have no effect in eradicating the thoughts and apparent purposes of the wanton. The perversion of her sexual forces arouses a riot within her, and plays havoc with her otherwise good disposition. Seclusion is peremptorily demanded. A few spasms, like the clearing effect of a tempestuous thunder storm upon the heavy atmosphere, clears and refreshes, for a time, her moral nature. Like another Ophelia, she would seem to show that

"Thoughts impure may pass through minds of angels and of men
And leave no stain!"

An attendant brings to the office a young man whose past record has been one of general confidence and goodness and willingness of disposition. In view of this he enjoyed special indulgences and privileges. But what a change! He is now ferocity itself. His eyes are those of a maniac. His fingers twitch, and he glares upon the attendant with almost demoniac malignancy. What has happened? In the course of a daily duty, which he has neatly performed for two or three years, a common place direction is given, and the young man replies vulgarly and impudently. A proper admonition from the attendant brings out a strange display of temper, and before the unsuspecting officer realizes the situation the young fellow steals upon him, and with horrible imprecation strikes him in the face and on the head and clutches at his throat. There is every indication that the desire to kill has been aroused, whether willingly or not on the part of the unfortunate is of little consequence. For the instant it is there. He succeeds in tearing clothes and doing some scratching, before he is secured and brought to us quivering with the intensity of his excitement. We hear the recital in full, and he admits it all in a sort of way that leads one to feel he is sorry he did not do greater damage. Dismissing the attendant, we have the young fellow sit down by us, and a long, quiet, earnest, low-toned talk, delivered kindly but firmly, brings him to tears, and then we realize that the epileptic fury has gone—the epileptic cloud has passed once more from over him. The diversion of his mind rapidly to other subjects, after his confession that it was "the bad feeling" within him that made him do so, completes the temporary treatment. He goes to the attendant humbly, and, we have no doubt sincerely, begs his pardon, and takes up the thread of daily duty where he dropped it, to continue it until interrupted by a spasm or such another attack as we have described. This one was the first in the history to our knowledge; the next may be to-morrow, next month, in an hour, or a year hence; perhaps never; no one can tell.

The establishment of a separate home for epileptics on our new site at Gelston, and the beginning of the work there upon such promising lines, has filled us with proudest hopes. It was a step in the right direction, and for which a grateful future will preserve for those who have founded it an immortal memory. In the consideration of this very question of providing special accommodations for the epileptics, Dr. Peterson (already quoted) has written:

For every other defective class provision has been made, in greater or less degree, for the insane, for idiots, for the deaf and dumb and blind, for the sick, for the crippled, for the aged and infirm, for young malefactors in reformatories, for the negro and the Indian; and for all of these improvement in care, treatment, or development, is continually progressing.

Almost alone, however, has the sufferer from epilepsy been left to shift for himself, usually an outcast from his family, expelled from the schools, denied industrial employment, shunned to a great extent by his fellows, left to grow up in idleness and ignorance, friendless, a prey to one of the most dreadful and most hopeless of human ills, refused admission to general hospitals, generally drifting at last to the almshouse and insane asylum. He is given refuge in the insane asylum, not as a rule because he is deprived of reason—although many epileptics do become demented or unmanageable—but because there is no other place for him to go. Hundreds, nay thousands of epileptics are in American asylums at this moment who do not really belong there, and of whom many will be found who do not show the slightest mental aberration. It is an injustice to the epileptic, and it is a detriment to the insane.

And in conclusion he says:

This essay has been written in the hope that some public sentiment may be aroused as to the necessities of this neglected class of defectives; in the hope * * * for the early establishment in this or some other State of an epileptic colony, which shall become a home for the homeless, a place of refuge from many miseries, an educational institute for those who are forbidden the public schools, an industrial college for those to whom the ordinary avenues of trade are closed, a hospital where care or palliation shall be possible, and where the highest scientific minds may be enabled to discover some time a specific against one of the most woeful of human ills; in short, a prosperous, industrious, and thriving community to serve as a model for many other such yet to be founded on this continent.

IN CONCLUSION, we beg to here express our sincere appreciations of the innumerable courtesies and kindnesses received from the Trustees, both as a Board and as individuals. In these expressions of grateful appreciation, the Matron joins the writer in profound regard. These acts have strengthened our hands, encouraged us to renewed zeal when we might have wavered, and have been a never failing antidote for all the tire and anxiety of managerial care. We trust that our united efforts have found favor with the Board, and afforded you satisfaction amidst the perplexing cares of your responsible offices, and we hope that our labors in serving you in the fruitful year just entered upon may be such as to warrant a continuance of your valued esteem.

To the officers and members of the general staff, who have labored with us to further your designs and purposes, we have the pleasure of highly commending for their industry and conscientious interpretation of the needs of the various duties assumed. Without their personal efforts to further the interests of the Home upon the lines laid down to them, much that we now proudly point to would have been unaccomplished.

And, lastly, to the patrons and many friends of the Home who have shown us many personal considerations pleasant to note, remembered our children substantially, and appreciated our efforts in their behalf, our gratitude is also due, and thus publicly acknowledged.

I have now to invite your attention to the following tables as setting forth in detail the financial transactions of the institution for the past fiscal year:

SCHEDULE A.

RECAPITULATION OF RECEIPTS AND EXPENDITURES DURING THE FORTY-FIRST FISCAL YEAR
ENDING JUNE 30, 1890.

Cr.

June 30, 1889—By cash balance in hands of Treasurer	\$1,601 03
By cash balance in hands of Trustees	300 00
June 30, 1890—By warrants and coin from State Controller, account of maintenance	38,718 45
By warrants and coin from State Controller, account of site and building	53,981 10
By warrants and coin from State Controller, account of furniture	3,242 70
By warrants and coin from State Controller, account of water, sewerage, etc.	129 28
By cash from parents and guardians, account of tuition and maintenance	2,832 00
By cash from the sale of live stock and junk	145 65
By cash from Bank of Santa Clara County (special deposit) ..	1,000 00
By cash from rents at Hillgirt (Glen Ellen)	166 66
By cash from interest on special deposit in bank	45 00
By cash from special donations	1,531 15
	<u>\$103,693 02</u>

Dr.

June 30, 1890—To cash paid local creditors, account of maintenance at Santa Clara	\$30,374 21
To cash paid local creditors, account of maintenance at Hillgirt	8,344 24
To cash paid local creditors, account of site and buildings	53,978 60
To cash paid local creditors, account of furnishing	3,242 70
To cash paid local creditors, account of water, sewerage, etc.	129 28
To cash paid State Treasurer	2,493 55
To cash paid for musical instruments from Donation Fund	110 00
To cash held by Trustees, as Contingent Fund for Hillgirt	100 00
To cash advanced by Trustees from Special Fund, account of claims at Hillgirt	1,804 00
To cash on special deposit with Union Savings Bank, San José ..	2,000 00
To cash in hands of B. D. Murphy, Treasurer	983 19
To cash in hands of Superintendent	130 75
To State warrant in hands of Superintendent, unclaimed (account of Hillgirt)	2 50
	<u>\$103,693 02</u>

SCHEDULE B.

RECEIPTS FROM THE STATE CONTROLLER ON ACCOUNT OF THE APPROPRIATIONS FOR THE
FORTY-FIRST FISCAL YEAR, ENDING JUNE 30, 1890.

Account of Maintenance.

1889—August 25—Received warrants Nos. 1930 to 1988 from State Controller	\$3,087 04
September 30—Received warrants Nos. 3693 to 3727 from State Controller ..	3,605 81
October 17—Received warrants Nos. 4810 to 4871 from State Controller	2,822 42
November 26—Received warrants Nos. 6892 to 6946 from State Controller ..	2,764 03
December 20—Received warrants Nos. 8013 to 8063 from State Controller ..	2,986 22
1890—January 27—Received coin from the State Controller	2,415 87
February 17—Received coin from the State Controller	2,831 15
March 29—Received coin from the State Controller	3,934 74
April 16—Received coin from the State Controller	3,138 77
May 1—Received coin from the State Controller	173 82
May 14—Received coin from the State Controller	3,838 81
June 23—Received coin from the State Controller	1,942 98
June 25—Received coin from the State Controller	1,875 51
July 22—Received coin from the State Controller	3,351 28
	<u>\$38,718 45</u>

Account of Site and Buildings.

1889—October 3—Received warrants Nos. 3893 to 3937 from State Controller	\$613 85
October 23—Received warrants Nos. 5114 to 5222 from State Controller	167 20
November 26—Received warrant No. 6947 from State Controller	25 00
December 3—Received coin from State Controller	50,000 00
1890—January 27—Received coin from State Controller	30 00
February 22—Received coin from State Controller	52 00
April 16—Received coin from State Controller	1,090 20
May 1—Received coin from State Controller	18 25
July 22—Received coin from State Controller	1,984 60
	<u>\$53,981 10</u>

Account of Furnishing.

1890—April 16—Received coin from State Controller	\$917 27
May 1—Received coin from State Controller	1,326 92
May 14—Received coin from State Controller	414 27
June 25—Received coin from State Controller	195 87
July 22—Received coin from State Controller	388 37
	<u>\$3,242 70</u>

Account of Water, Sewerage, and Improvement of Grounds.

1890—May 14—Received coin from State Controller	\$111 73
July 22—Received coin from State Controller	17 50
	<u>\$129 23</u>

SCHEDULE C.

PAYMENTS MADE FROM THE STATE APPROPRIATION FOR MAINTENANCE AT SANTA CLARA DURING THE FORTY-FIRST FISCAL YEAR, ENDING JUNE 30, 1890.

1889—August 27—Payroll for the month of July, salaries.....	\$1,129 16	
Oregon Improvement Company, coal.....	626 05	
Pacific Manufacturing Company, lumber.....	122 94	
Hancock & Regnart, meats.....	119 25	
J. B. O'Brien, dry goods and clothing.....	115 25	
Dr. A. E. Osborne, Superintendent, contingent expenses.....	105 08

To balance of said appropriation available for the forty-second fiscal year.....	\$14,870 72	

SCHEDULE K.

RECEIVED FROM FARM PRODUCTS, ETC.

Milk, 27,455 quarts at 7 cents	\$1,921 85	
Eggs, 2,395 at 2½ cents	59 88	
Potatoes, 4,689 pounds at 1½ cents	57 36	
Tomatoes, 113 boxes at 50 cents	56 50	
Corn, 1,836 ears at 1 cent	18 36	
Squash, 3,238 at 2½ cents	82 20	
Cucumbers, 2,670 at 1 cent	26 70	
Melons, 171 at 10 cents	17 10	
Cabbage, 24 at 5 cents	1 20	
Pumpkins, 1,000 pounds at ½ cent	5 00	
Beets, 365 pounds at 1 cent	3 65	
Peas, 163 pounds at 5 cents	8 15	
Peaches, 3,761 pounds at 2½ cents	94 00	
Apricots, 243 pounds at 2½ cents	6 07	
Grapes, 492 pounds at 2½ cents	8 30	
Almonds, 41 pounds at 10 cents	4 10	
Hay, 20½ tons at \$10	207 50	
Pork, 5,584 pounds	530 48	
Calves, 5 sold at	30 00	
	\$3,138 40	
Expenditures of farm:		
Farm expenses, plowing, seeding, cultivating, etc.	\$542 16	
Feed for stock	516 13	
Live stock	200 00	
Farmers' wages	360 00	
	1,618 29	
	\$1,520 11	

The above table does not include the estimated value of several acres sowed to wheat that were diverted to pasturage and supported an average of twenty head for four months. At the usual rate of \$1 50 per head per month, this would make \$120 to be added to the value of the farm's yield, or a total profit over all expenditures of \$1,640 11.

INVENTORY AT SANTA CLARA, JUNE 30, 1890.

Aggregate		\$1,750 00

*This schedule comprises the stock purchased by the Board of Trustees with funds in their hands other than State Funds, and should not, therefore, be made as an offset against any expenditure on account of maintenance at Gelston until the Board has been reimbursed by the State for the purchase of said stock.

EXTRACT FROM THE REPORT OF THE FINANCE AND AUDITING COMMITTEE.

STATE OF ACCOUNTS, ETC., FOR FISCAL YEAR ENDING JUNE 30, 1890.

CALIFORNIA HOME FOR THE CARE AND TRAINING OF FEEBLE-MINDED CHILDREN, September 23, 1890. }

Mrs. KATHERINE B. LATHROP, President, and the Board of Trustees of said Institution:

The undersigned Finance and Auditing Committee of said Board of Trustees, agreeably to and in compliance with the requirements governing the duties devolved upon us to perform, respectfully report that on the twenty-third day of September, 1890, they proceeded to the "Home" at Santa Clara and thoroughly and carefully investigated into the books, accounts, and vouchers of the Superintendent and Secretary of said institution; and, also, the accounts of the Treasurer, as submitted to us up to the first day of July, 1890, and find the same in all respects accurate and correct, and the books well and properly conducted and kept.

We examined all details of receipts and expenditures received and paid out by said institution through its officials, and carefully examined each and all vouchers or receipts for each and all expenditures, and find the same correct. From the account rendered to us by the Treasurer, and filed with the Superintendent and Secretary of the institution, we find the same agree as to the details of receipts and expenditures with the book of our Secretary and Superintendent, and balance agreeably with each other to July 1, 1890.

We have looked over the inventory of assets and find each and every article therein enumerated as set down at their cost price, which is the only and correct way of preparing and submitting such property. It follows that considerable discount would have to be made on the prices named to realize the proper prices on the same by reason of the wear and tear on same.

All of which is respectfully submitted.

(Signed:)

WILLIAM HARNEY,
GEO. W. GIBBS,
Finance and Auditing Committee.

All of which is respectfully submitted.

A. E. OSBORNE,
Secretary and Superintendent.

REPORT.

OFFICE OF THE CALIFORNIA INSTITUTION FOR THE
EDUCATION OF THE DEAF AND DUMB, AND THE BLIND, }
BERKELEY, November 1, 1890.

To his Excellency R. W. WATERMAN, Governor:

SIR: The Directors of the Institution for the Deaf and Dumb, and the Blind, make the following report concerning the trust which has been committed to them. The period covered by this report is two years, ending June 30, 1890.

The total number of pupils under instruction during the period mentioned has been two hundred and nine. The total number of pupils at the close of the present fiscal year was one hundred and sixty-eight, and at date of report one hundred and eighty-one pupils were enrolled. During the two years covered by this report forty-one pupils have been graduated from the Institution.

The total receipts from State appropriations for the two years ending June 30, 1890, were.....	\$94,855 12
From Principal.....	2,383 83
Interest on balances.....	61 80
From balance June 30, 1888.....	4,634 41
Total receipts.....	<u>\$101,935 16</u>
Total disbursements.....	\$99,755 99

For a detailed statement of expenditures for the maintenance of the Institution, reference is made to the report of the Principal herewith submitted, and also to the same for a particular statement of the appropriations needed for the efficient conduct of the Institution for the next two years.

During the last two years the main edifice, known as the Educational Building, has been carried up another story and completed according to the original plan. The completed structure adds a sufficient number of class-rooms together with a convenient assembly-room for all the needs of the Institution for many years to come. The perfection of detail, the symmetry and solidity, and economy of construction have given great satisfaction to the Directors. During the same period another structure, to be known as the Girls' Home, has been completed. It is a plain, solid edifice, admirably adapted to the present needs of the Institution. Both of these buildings have been carried to completion by an expenditure within the appropriations made by the State.

The wisdom of separate structures having plain exteriors, with the utmost security against fire, so harmoniously grouped that the whole, for educational purposes, is a unit, is now beyond question. Here are two institutions requiring totally different methods of instruction, the whole under one supervision, where the success of the union has been carried to the most satisfactory results.

The question of an adequate water supply has been one of the most

difficult with which the Directors have had to deal. Two years ago an appropriation of \$10,000 was asked, and granted by the Legislature. This sum, it was hoped, would be ample for the increase of the necessary water facilities. At least ten thousand gallons a day, beyond the present available amount, ought to be provided. Soon after the appropriation was made available, it was found that the cost of sinking an artesian well one thousand feet would be not less than \$13,000, this being the lowest tender made. The Directors therefore resolved to try for water by means of a tunnel into the hill in the rear of the Institution, near where two small tunnels were affording a moderate supply of water. The new tunnel was driven nine hundred and seventy-four feet, at a cost of about \$3,000, when, not finding any water, the work was suspended. There is good reason to believe that an adequate supply of water can be obtained from an artesian well driven to a depth of from one thousand to one thousand five hundred feet; for this purpose the Directors ask for an additional appropriation of \$10,000.

It gives the Directors pleasure to state that, beside the substantial improvements made during the last two years, the buildings and grounds have been kept in perfect order, and that the internal management of the Institution has been efficient and altogether satisfactory.

Respectfully submitted.

WM. C. BARTLETT,
President.

REPORT OF THE PRINCIPAL.

To the Board of Directors of the California Institution for the Deaf and Dumb, and the Blind:

GENTLEMEN: I have the honor herewith to submit the biennial report and papers, which give in detail the history and operations of this school during the two years ending June 30, 1890:

NUMBER OF PUPILS.

The movement of pupils has been as follows:
On the rolls June 30, 1888:

DEAF AND DUMB.	
Boys.....	77
Girls.....	46
	— 123
BLIND.	
Boys.....	15
Girls.....	15
	— 30
Total both classes	153

The admissions since the same date have been as follows:

DEAF AND DUMB.	
Boys.....	28
Girls.....	16
	— 44
BLIND.	
Boys.....	11
Girls.....	1
	— 12
Total admissions	56
Total under instruction	209

There have been graduated and discharged during the two years:

DEAF AND DUMB.	
Boys.....	20
Girls.....	11
	— 31
BLIND.	
Boys.....	6
Girls.....	4
	— 10
Total deductions	41
On rolls June 30, 1890.....	168
Admitted since opening of school	18
Discharged since opening of term	5
On rolls at date of report	181

HEALTH.

It is gratifying to report that the two years have gone by with no death among either pupils or employés. One little boy, who had always been subject to rheumatism, went home, and some months afterwards died of heart disease. The health of the pupils has also continued good. A few cases of scarlet fever, and many cases of the prevailing "grippe," which was epidemic during the past winter, comprise all that is worth recording, and from these ailments the children who were attacked recovered without any evil consequences.

It is not often in the life of a school of this sort that two years elapse without the corps of teachers being modified either by death, resignation, or health failure; but it is my good fortune to be able to say that the officers of the Institution and heads of departments have not been changed in any respect since the date of the last report, except to add the name of John Trevethan as engineer. The employment of this additional help in that department became necessary when cooking by steam and the electric light plant were introduced.

THE SCHOOLS.

The work of the class-room during the past two years has been satisfactory, and shows good results in the intellectual progress of the pupils, and, in what is of higher significance, the development of character. No new methods have been introduced, because new methods in the instruction of the deaf are not likely to be found.

There are new applications and ingenious devices for increasing the efficiency of the means already used, and the results obtained show a vast improvement over the outcome of the schools fifty or a hundred years ago; but since De L'Epee adopted the sign language, and Heinecke adopted articulate speech, as the instrument of instruction, the work has been pushed along those two lines of endeavor.

There will probably always be honest differences of opinion as to the merit of what has come to be known as the French and the German systems. There is a popular belief that lip-reading and articulation are great helps in aiding a deaf person in obtaining employment, and that he is to be restored to society and its multitudinous voices by the same means. Whether this belief is well founded cuts no figure in the case. I think, however, it has had an important influence in bringing about the great revival which the German system has undergone during the last thirty years in this and other countries. Whenever and wherever the use of a man is considered more important than the man himself, then and there that system of training will prevail which is supposed to increase his commercial value. Whenever and wherever a man is considered superior to any use he may be put to, then and there education will be based on broader grounds and tend to develop manhood and character rather than handicraft and mechanics. The former theory has prevailed on the continent, and it cannot be denied that something of the same spirit is abroad in our own country. Fault has been found with our public system because the teaching is not practical enough. There is much to be said on both sides of the question, but this is not the place for its discussion, and I allude to it merely to indicate what I believe to be one of the causes that has brought about the extraordinary

interest for the last quarter of a century in the German system which, so far from being new, is as old as deaf mute instruction.

IMPROVEMENTS.

During the period covered by this report there have been more improvements made in the physical development and equipment of the Institution than within any two years of its existence.

First and foremost in the order of importance is the completion of the Educational Building, according to the plan made out many years ago. The whole structure has been carried up another story, and with the tower one hundred and sixty feet high now presents a plain but dignified appearance. The additional floor is divided into school-rooms, art-rooms, and the fine assembly hall, which is one hundred and twelve feet long by fifty-two feet wide. This room is the special pride of the Institution. Its beautiful proportions and graceful architecture excite the admiration of all visitors. It has been furnished with six hundred and sixteen opera chairs with folding seats, and carefully arranged to give easy and unobstructed view of the stage platform. Under the gallery is a space thirty by forty feet, to be devoted to library purposes, and with the room now in use will afford shelving for five thousand books. The cases will be built this year by the boys of the cabinet shop, and from plans already prepared by Messrs. Wright & Sanders. The north end of the building is devoted to the art department. Two rooms of ample dimensions, thirty-six feet by twenty feet, and thirty feet by twenty feet, connected by sliding doors, and with broad skylights, offer excellent facilities in a line of work that is every year becoming of larger importance. Solid shutters to the windows, instead of the ordinary slat blinds, and roller curtains under the skylights, enable the teacher to manage the light as best pleases him. The easels, stands, drawing boards, cases for materials, etc., are all of home manufacture, and have thus been obtained with little expense to the Institution. The south end of the building is devoted to class-rooms, and the old assembly hall on the first floor has been divided and put to the same use.

At present writing the new Home for the girls is not finished, although it is expected to be in occupation before the Legislature meets. The house is built in the same plain, substantial manner as the other Homes, though somewhat improved in its architectural effect by putting the fire-escape in the form of a round tower on the corner, and a square, granite-capped bay in front. The fireproof features of construction have been kept in view, and the general arrangements for the comfortable home-life of the pupils have been carefully studied.

An appropriation of \$2,000 was made by the last Legislature for a new boiler and apparatus for steam cooking. This sum has been expended with most satisfactory results. A forty-one horse-power water-tube boiler has been purchased and put in place with a Llewellyn heater for purifying the water and returning it at almost boiling point to the boiler. The devices for heating water for the laundry and kitchen use have been reconstructed, and dependence on the range for this supply has been done away with. Two soup kettles, a mush boiler, two vegetable steamers, and coffee and tea boilers have been placed in the kitchen, and all connected with the engine house where steam is generated for all uses. The condensed steam is saved and run into one of

the large cisterns, whence the water is pumped back to the reservoir on the hill. The preparation of food for the table by the apparatus introduced has not only been much facilitated, but the quality of it has been greatly improved.

It was with some hesitation that I asked the last Legislature for \$1,000 with which to test the experiment of electric lighting. A forty-light plant was intended, enough for three sitting-rooms and the dining hall. The Board resolved to install a seventy-five-light plant, with additional lamps to the number of one hundred and twenty. This machinery has been running since the first of the year, and with such regularity and satisfaction as to put the matter beyond the domain of experiment.

The electric light has come to stay. Its convenience, steadiness, comparative lack of heat, and safety, make it a necessary part of the equipment of a school like this. There are only two questions to be considered on the other side, namely: economy, and the danger of being suddenly left in darkness by the failure of the machinery at any time. The latter objection is now overcome by introducing the storage batteries, which seem to do all that is claimed for them. I have made some careful experiments to test the cost of the light, and am led to believe that it is cheaper than gas, even as we make it. The engineer weighed out four hundred pounds of Wellington screenings that cost \$7 45 per ton of two thousand two hundred and forty pounds, or \$1 33 for four hundred pounds. With this he ran seventy lights of sixteen candle-power for four hours and twenty minutes, or a cost for coal of .4 of a cent an hour for each light. This is almost as cheap as coal oil. Of course there is to be added the wear and tear of machinery, the breakage of lamps, and the cost of attendance; but, with a larger plant these items proportionately decrease, and I am satisfied that it would be a measure of economy to install a plant of sufficient capacity to light the whole Institution, and thus do away with the use of gas.

In order to place before the Legislature a definite idea of the cost of this improvement, I have asked for and received a proposal from the United Edison Electric Light Company for a complete system, including engine, wiring, sockets, cut-outs, lamps, dynamos, etc., for all the buildings of the Institution, and delivered in perfect order. Their bid is as follows:

For Ball automatic engine and steam piping.....	\$950
For two 135-light dynamos, wiring, lamps, etc.....	1,997
Total	\$2,952

The company also agree for \$2,106 additional, to place in position with all proper connections, a system of storage batteries of sufficient power to run sixty lights each of sixteen candle-power, for ten hours. There are several advantages claimed for the storage battery, and apparently on good grounds. Its use enables the engineer to lay up during the day a supply of electricity for night use at a great saving in attendance and of fuel. It offers a safeguard against the danger of being left in darkness by a sudden or momentary disarrangement of the machinery. It makes possible the running of certain lights which, in an establishment like this, must be kept burning all night. It is also said to improve the steadiness of the whole system. I strongly recommend an appropriation for this purpose, and request the Legislature to inquire into the advantages of such an improvement.

THE STRAUSS CLOCK.

Another most valuable equipment to the Institution is a clock placed in the tower of the Educational Building, and with striking attachments and bell, weighing one thousand pounds. This has been in use only since last January, but so necessary has this timepiece with its accurate marking of hours and half hours, come to be to the life and comfort of the household, that it is a wonderment how we lived without it. The clock was built by the Seth Thomas Clock Company, and is of the finest workmanship. It has four dials, runs for eight days without winding, and is guaranteed for five years not to vary fifteen seconds in a month. As a matter of fact, it has not varied ten seconds a month for the past six months. This useful piece of machinery has been obtained without cost to the State. Some years ago the late Louis Strauss, of San Francisco, left by will the sum of \$5,000 to the Institution for the Deaf and Dumb, and the Blind, coupled only with the restriction that the principal should be invested in mortgage on San Francisco property, and should not be impaired. From the accumulated interest of this sum, the Directors appropriated \$1,375 for the purchase of the machinery, and in grateful remembrance of the donor of the fund, they have called it the "Strauss Clock," and have had a suitably engraved plate attached to the frame commemorating this fact.

And this leads me to speak of a great advantage which a permanent and growing fund affords to the Directors of a school like this in enabling them to devise and to do many things that are not strictly within the province of the State. By this means they can found scholarships, loan money to deserving graduates, give outfits for a start in life, and, when exceptional talent is exhibited by pupils, offer them pecuniary assistance which may be needed for its development either at home or abroad. I think it would be difficult to estimate the full measure of benefit which has been derived by the Institution and its pupils from the money left by Mr. Robert Durham, of Butte County, and Mr. Louis Strauss, of San Francisco. The original sums paid into the treasury of the Institution by the executors of those two generous men were as follows:

DURHAM FUND.

From the estate of Robert Durham, after deducting all expenses.....	\$33,673 88
Interest to June 30, 1890.....	32,740 12
Total proceeds.....	\$66,413 95
Expended for various purposes benefiting the Institution and its pupils.....	20,046 40
Amount of fund to date.....	\$46,367 55

STRAUSS FUND.

Received from the estate of Louis Strauss.....	\$5,000 00
Interest to June 30, 1890.....	2,454 90
Total proceeds.....	\$7,454 90
Expended for clock.....	\$1,375 00
Expended for sundry purposes.....	956 95
Total expenditure	2,331 95
Amount in fund at date.....	\$5,122 95

In spite of the large sum put out in various ways and places where it will do most good, and aggregating a total of over \$22,375, these two funds

have grown from \$38,673 83 to a total of \$51,490 50; and still, year by year, the bequests are accomplishing their beneficent work, and the principal is increasing at the same time.

In this connection it may not be out of place to refer to the success of Mr. Douglas Tilden, who has been enabled to pursue abroad his art studies through the means which the Directors wisely set apart for his use from the Durham Fund. Mr. Tilden has been in Paris only two years, but has had two works accepted and exhibited at the French Salon; and for his second statue, "The Tired Boxer," he received the award of "Honorable Mention," which is the highest honor an American sculptor has ever obtained at the hands of the French Committee.

We mention this incident to illustrate the value of a fund under the control of the Directors. Here was a young man of exceptional talent, but of limited means, who would probably have spent the best, perhaps all, the years of his life in simply earning his daily bread, and yet by judicious help afforded him at a time of need, an honorable, perhaps great, career is brought within his reach. By appropriation from the same fund, Mr. D'Estrella, a graduate and teacher, was sent abroad in the interests of the Art Department, and brought back with him a vast amount of interesting information, which he has been imparting to the pupils ever since. At the present time the Directors are paying the expenses at the San Francisco Art School of a young deaf mute, who gives great promise of eminence as an artist. It may yet be thought best to send him abroad for larger facilities and better instruction. If so, the Directors have the means to carry out what their judgment dictates.

It gives me pleasure to note an instance of generous liberality on the part of Messrs. Wright & Sanders, architects of San Francisco, by which an important addition is about to be made to the equipment of the Institution. Soon after the fire in 1875, these gentlemen donated \$750, the amount of their commission on the building erected at that time, towards the purchase of a pipe organ. The money was placed at interest, and now amounts to \$1,700. They have added \$800 to this sum, and have ordered a \$2,500 organ, which is in process of construction, and will be put in place in the new Assembly Hall before this report is printed. By this means the resources of the blind pupils will be enlarged, and their happiness increased, and Messrs. Wright and Sanders are entitled to the grateful remembrance of the blind for this timely and useful gift.

Through the generosity of Mr. Albert Bierstadt, of New York, the Institution has received a fine specimen of the work of Vidal, the celebrated blind sculptor. This is a bronze horse, modeled with great skill and truthfulness. It is not only a beautiful ornament, but is a constant reminder of what may be accomplished under difficulties, and thus is a stimulus to the blind and the deaf to high endeavor.

After the disastrous fire of 1875, which turned the whole household out into the night in a single hour, the Directors adopted a system of segregated buildings which would render such a loss of property impossible. From year to year the work of reconstruction has been going on, till now the plan is completed, with the exception of the third Home for the boys. It will be necessary for the Legislature to make an appropriation of \$50,000 to erect this building. When finished, the State will have a property which is worth more than it cost, and of which Mr. Fred H. Wines, Secretary of the Illinois State Board of Charities, wrote: "The school is, in its way, a gem—probably the most perfect in

respect to its general arrangement and the admirable balance of all its parts that I have ever seen." The wisdom of adopting a plan of segregated buildings becomes more and more apparent with the lapse of years. Instead of a large structure liable, as before, to sudden wiping out by fire, we have a group of buildings so separated as to make a great loss practicably impossible. The homes are, to all intents and purposes, fireproof. The segregation of pupils reduces the discipline to something like that of the fireside. The health of the household is vastly improved. The tendency to disorder and insubordination is checked. The danger from epidemics is largely decreased. The problems of light and heat and ventilation are simplified, and while the cost of maintenance is perhaps slightly increased, the advantages in every way more than compensate this item.

We have been reminded on several occasions of the need of a hospital, where cases of contagious disease may be segregated and treated with safety. In a family as large as this, there will always be a percentage of sick who require the care of a special nurse, and the conveniences of a well arranged hospital. Scarlet fever, smallpox, measles, diphtheria, and severe fevers are liable to break out at any time, and at present we have no adequate equipment with which to fight them. I trust, therefore, that provision will be made by the coming Legislature to erect a small building, to cost about \$2,500, where sick children may be cared for with comfort to themselves and safety to the rest of the household.

The income and expenditures of the Institution, during the two fiscal years ending June 30, 1890, have been as follows:

RECEIPTS.	
From balance, June 30, 1888	\$4,634 41
From State appropriation	94,855 12
From Principal	2,383 83
From interest, Union Savings Bank	61 80
Total receipts	\$101,935 16
DISBURSEMENTS.	
For salaries and wages	\$49,974 18
For groceries and provisions	15,234 15
For clothing	1,298 61
For furniture	2,536 44
For building and repairs	4,618 49
For fuel and lights	9,839 44
For laundry	2,195 97
For stable and dairy	5,095 75
For miscellaneous expenses	3,049 41
For industrial department	3,038 30
For articulation department	1,875 00
For salary of Secretary and Treasurer	1,000 00
Total disbursements	\$99,755 99
Balance June 30, 1890	\$2,179 17

The details and items of expenditures will be found in the Principal's dissections herewith submitted.

For the first time in four years, I am obliged to ask for an increase of appropriation for support during the next two years. The increase of pupils continues with that pitiless certainty which characterizes the law of averages. Young and prosperous States have not only the natural increment of population to provide for, but also the additional numbers which come by immigration. California, by her vast and developing

resources, is attracting many settlers from the States east of the Rocky Mountains. They come with all their belongings, but their first and tenderest care is for those children upon whom the burden of deafness and blindness is laid. Good parents, and of such are made the best citizens, would not move to a State where no provision is made for such unfortunate children as they may have, and this accounts for the many letters of inquiry I receive from residents of other States concerning the opportunities afforded in California for educating the blind and deaf. We have had an average attendance of one hundred and seventy-one pupils during the term just closed. The per capita cost has been \$291 69. I respectfully recommend, therefore, that the Board ask the Legislature for an appropriation of \$51,300 for the fiscal year ending June 30, 1892, and of \$53,000 for the year ending June 30, 1893. These figures are based upon an estimated attendance for the first year of one hundred and ninety pupils, and of two hundred pupils the second year, at a per capita of \$270 and \$265, respectively. With the increase of numbers, the per capita cost decreases till it reaches a minimum of about \$250, which is as low as can ever be expected. This is the sum which the State of New York allows for each of its fifteen hundred pupils, where the wages of servants is little more than half the rate of pay for similar service in California.

It is sometimes said by those who have not taken the pains to examine the school and its work, that it costs a great deal to support the Institution and requires a seemingly large extent of housing. This is true, and it may not be out of place here to give the reasons for it. And let me begin by setting forth the material we work with, and what we seek to do with it.

Without education the deaf mute is not only a useless member of the body politic, but often a dangerous character. Ignorant of human or divine law, and uninstructed in the use of his hands, he naturally gravitates to the poor house or the prison; to the latter, however, only as a measure of safety to the citizen, for no Court has ever inflicted confinement or execution as a punishment for murder or crime committed by an uneducated deaf mute. But whether he goes to the almshouse, to the jail, or wanders aimlessly about the country, in any case he is either an active danger or a dead weight for society to carry. Now it is this useless, often dangerous material that the Institution deals with, and attempts to convert into useful, productive citizens. To bring about this result involves a somewhat complicated domestic establishment and educational machinery, because a whole and symmetrical man or woman is to be developed out of the child that comes to us. For a great portion of many years the Institution is to its pupils home, school, and shop. We have not only to provide for both sexes, but for two classes of each. The blind are as far apart from the deaf in their methods of instruction, as both are from normal children. Separate apartments, special teachers, and peculiar apparatus have to be provided for those whose senses of touch and hearing must do the work of the eye. In short, we are carrying on *two* institutions under one management. All special work is expensive, and the work here is not only special but varied. Classes are necessarily small, and the number of teachers correspondingly increased. A large number of our pupils have to be taught speech and lip reading, and this requires additional and special teachers and rooms. Music must be taught to the blind, both as a means of livelihood and as a

resource of enjoyment. In these days the many applications of pictorial and plastic art to the industries of life make the facile use of the pencil and brush an important aid to success. Especially is this true of the deaf, and so an art department is a necessary function of a well equipped school of this sort. Whether trade schools are a proper and necessary part of the public school system may be questioned, but there is no doubt that instruction in mechanic arts is an indispensable adjunct to the work of an institution for the deaf and dumb. There is no time after the pupils leave school to go through the needful apprenticeship, and nobody will take the trouble to teach boys who cannot hear the intricacies of a handcraft. The training of the shop and the class-room must be carried on simultaneously, and both under the guidance of experienced teachers. Girls, also, must be fitted not only for the intellectual duties of life, but for the discharge of those domestic functions that properly belong to women, whether as managers of their own household or in families for hire. To this end, a cooking school has been established and shops for wood working and printing fitted up for the training of our boys and girls, so that they may be prepared at once to earn their own livelihood, and add something to the productive forces of the community when they have finished their time in school.

From all this it will be seen how complicated and comprehensive is the conduct of a school for the deaf and the blind, which, under the segregated plan of building, ought to comprise, first, a home for deaf boys; second, a home for deaf girls; third, a home for blind boys; fourth, a home for blind girls; fifth, a refectory; sixth, a school for deaf pupils; seventh, a school for blind pupils; eighth, a music department with teaching and practice-rooms; ninth, a department for the teaching of speech and lip reading for the deaf; tenth, an art department; eleventh, a hospital where the sick may be cared for; twelfth, a cooking school; thirteenth, a mechanic arts school; fourteenth, a gymnasium where the physical interests of the pupils may be looked after, and care taken that they do not leave us with health or body impaired by neglect or ignorance.

All these diverse functions require much room and cost much money; but, taking into account the material we work with, and the results obtained, I do not know of any investment that pays the State so well.

By an oversight there was no provision made by the last Legislature for the heating apparatus of the new school building and the Girls' Home. The first cost \$1,300, and the second cost \$740, making a total of \$2,040, for which sum the Legislature should be asked to make an appropriation. The wants of the Institution for the next two years may be summarized as follows:

For support, including the articulation and mechanical departments.....	\$104,000 00
For additional Boys' Home.....	50,000 00
For electric light plant.....	2,952 00
For heating apparatus.....	2,040 00
For hospital.....	2,500 00

These sums are all needed for the purposes specified, and, judiciously expended, will complete the Institution and provide for its support till the thirtieth of June, 1893.

ACKNOWLEDGMENT.

The pupils of this Institution are under great obligations to Mr. A. N. Towne, Vice-President and General Manager of the Southern Pacific Railroad Company, for favors extended to them in the way of free transportation to and from their homes. For years the kindness of Mr. Towne has been unremitting and unbounded, and the children owe him a debt of gratitude it is impossible for them to pay.

The favor of half fares granted by the Pacific Coast Steamship Company to the pupils, who live at the coast towns, is also gratefully acknowledged. The thanks of the officers and pupils are also due to the Directors of the Mechanics' Institute for invitations to the fairs held at the Pavilion in San Francisco from year to year. The days spent there are always full of pleasure and profit.

I also desire, in behalf of the pupils, to extend grateful appreciation for the services of Drs. Merriman & Son, the eminent dentists of Oakland, who have relieved so many cases of distress without charge.

In closing this report, it may not be amiss to note the fact that it also rounds out and completes a period of twenty-five years' service on the part of the writer. In 1865 I was called from New York to take charge of the Institution, then located in two cheap buildings on the corner of Fifteenth and Mission Streets in San Francisco. The accommodations were poor and the facilities for carrying on the work meager and inadequate, even for the small number of pupils then housed within its walls. An Act providing for a new site and building was passed by the Legislature in 1866, and under the terms of that Act the present beautiful location secured, and a stone structure erected, to which the school and household were transferred in October, 1869. On the seventeenth of January, 1875, the work of ten years went up in flame, and the wearisome labor of reconstruction began. For fifteen years it has been going on, and to-day we stand on the verge of completion.

In looking back over the quarter of century of service, I forget all the discouragements that at times have beset my path, and think only of the words of cheer and generous support that have lightened every burden and made labor among the people of California a delight. I am happy in the belief that I have had the confidence of every Governor under whose administration I have served. From the members of the various Legislatures who have had to do with appropriations, I have received the most courteous attention, and generous response to all my appeals on behalf of the deaf and the blind. But my greatest good fortune has been in the unselfish Directors, who from time to time have been appointed to the management of this Institution. With scarcely an exception, they have been men of the highest character, wise and conservative, sympathetic and cultured. To their prudent counsel and unfailing support is due whatever of success has attended my administration; and to none of them do I owe more than to you to whom this report is addressed. You have given your time to the service of this Institution, without stint and without reward; your counsel has ever been at my command, and your coöperation and confidence have made the duties of my office comparatively easy. In the hope that I may always prove worthy of the generous kindness you have extended to me, this report is

Respectfully submitted.

BERKELEY, November 1, 1890.

WARRING WILKINSON,
Principal.

ADDENDUM.

The following papers have been sent to the Institution for the use of the pupils, and for which thanks are hereby tendered: Alta California, San Francisco; California Voice, Los Angeles; Deaf-Mute Journal, New York; Mutes' Chronicle, Columbus, Ohio; Goodson Gazette, Staunton, Virginia; Deaf-Mute Advance, Jacksonville, Illinois; Deaf-Mute Hawkeye, Council Bluffs, Iowa; Deaf-Mute Mirror, Flint, Michigan; Mute Journal, Omaha, Nebraska; Deaf-Mute Optic, Little Rock, Arkansas; Mutes' Companion, Faribault, Minnesota; Deaf-Mute Times, Delevan, Wisconsin; Kansas Star, Olathe, Kansas; Daily Paper for Our Little People, Rochester, New York; Texas Ranger, Austin, Texas; Deaf-Mute Record, Fulton, Missouri; Silent Observer, Nashville, Tennessee; Deaf-Mute Voice, Jackson, Mississippi; Deaf-Mute Bulletin, Frederick City, Maryland; Register, Rome, New York; Tablet, Romney, West Virginia; Kentucky Deaf-Mute, Danville, Kentucky; Auralist, Chicago; Colorado Index, Colorado Springs, Colorado; Silent World, Philadelphia, Pennsylvania; Dakota Advocate, Sioux Falls, South Dakota; Silent Worker, Trenton, New Jersey; Sign, Salem, Oregon; Clionian, Portland, Oregon; Silent Educator, Flint, Michigan; Deaf-Mute Critic, Dubuque, Iowa; Deseret Eagle, Salt Lake City, Utah; Silent Hoosier, Indianapolis, Indiana; Deaf-Mute Pelican, Baton Rouge, Louisiana; Herald, Berkeley; Advocate, Berkeley; Bumble Bee, Alameda; Sioux, Red Field College, South Dakota; Evening Post, San Francisco; New Method, Englewood, Illinois.

PRINCIPAL'S DISSECTIONS OF EXPENDITURES FOR TWENTY-FOUR MONTHS ENDING JUNE 30, 1890.

Young, Hattie L.	San Francisco	San Francisco.

TERMS OF ADMISSION.

The California State Institution for the Deaf and Dumb, and the Blind, is located at Berkeley, about four miles north of the city of Oakland. Between San Francisco and Berkeley a steam ferry plies almost every half hour in the day, and from Oakland a railroad is constructed, which lands passengers within easy walking distance of the Institution.

First—The Institution offers its benefits to all deaf and dumb, or blind persons who are of age suitable for instruction, and who are of sound intellect, and free from vicious habits and contagious or offensive diseases.

Second—No charge is made for pupils from this State, except for clothing and traveling expenses.

Third—Pupils from other States or Territories are charged \$300 per annum, payable quarterly in advance. No deduction is made from annual charge on any account, except in case of prolonged sickness.

Fourth—The session begins on the fourth Wednesday of August, and closes the second Wednesday of June. Parents are earnestly requested to enter, or return their children, promptly at the beginning of the term. Only in extreme cases will the pupils be permitted to leave before school closes.

Fifth—Pupils should be provided with comfortable clothing when they enter the Institution, and their wardrobe renewed twice a year.

Sixth—All moneys designed for pupils should be placed in the hands of the Principal, to whom, also, all letters of inquiry, etc., should be addressed. Money orders should be drawn on the "Berkeley" Post Office; and all letters, packages, or trunks, should be addressed, "Institution for the Deaf and Dumb, and the Blind, Berkeley, Alameda County, California."

Parents or guardians of applicants for admission are requested to furnish written answers to the following questions:

1. What is the name of the applicant?
 2. When and where was he born?
 3. Is his deafness or blindness from birth; or is it from accident or disease? If so, at what age and from what cause did he become so?
 4. Is his deafness or blindness total or partial? If the latter, what is the degree of hearing or sight?
 5. Have any attempts been made to remove his deafness or blindness; and if so, what are the results?
 6. Are there any other cases of deafness, blindness, insanity, or idiocy in the same family, or among the collateral branches kindred? If so, how and when produced?
 7. Was there any relation between parents or grandparents before marriage?
 8. Has the child had the smallpox, scarlet fever, measles, mumps, whooping cough? Has he been vaccinated?
 9. What are the names, nationality, occupation, residence, and Post Office address of parents?
 10. What is the number of their children?

FIFTH ANNUAL REPORT
OF THE
BOARD OF DIRECTORS
OF THE
INDUSTRIAL HOME OF MECHANICAL TRADES
FOR THE
ADULT BLIND.

SACRAMENTO:
STATE OFFICE : : : J. D. YOUNG, SUPT. STATE PRINTING.
1890.

REPORT.

To the honorable R. W. WATERMAN, Governor of California :

The Board of Directors of the Industrial Home of Mechanical Trades for the Adult Blind herewith submits to you, in pursuance of law, its fifth annual report of the affairs and condition of the Home.

There has been no change in membership of the Board of Directors during the past year, with the exception that the vacancy created by the resignation of Mr. F. M. Smith has been filled by the appointment of Mr. Jacob Greenhood.

The officers of the Home are as follows: President of the Board of Directors, John P. Irish; Vice-President of the Board, Warren Olney; Secretary and Treasurer, L. A. Redman; Superintendent of the Home, Joseph Sanders; Physician of the Home, Andrew Fine, M.D. The salary of the Superintendent is \$2,100 per annum, of the Physician \$1,200 per annum, and of the Secretary \$500 per annum.

The employés of the Home and their rates of compensation are as follows:

Foreman of the workshops, per month	\$50 00
Clerk	40 00
Teacher in female department	25 00
Watchman and laborer	50 00
Gardener	30 00
Drayman	25 00
Assistant to foreman	16 00
Janitor	35 00
First cook	35 00
Second cook	30 00
Chambermaid	25 00
Three waitresses, at \$20 per month each	60 00
Total	\$421 00

The following are the names of the inmates present at the Home during the year, December 1, 1888, to December 1, 1889:

REPORT OF INDUSTRIAL HOME FOR ADULT BLIND.

NAME.	Date of Admission.	Age When Admitted.	Former Residence.	Native of.	Cause of Blindness.
Fred. V. Anderson.....	July 18, 1887.....	43.....	Los Angeles.....	Denmark.....	Paralysis of optic nerve.

October				75 00		47 10	2,563 45
November		48 35	33 03	75 00		49 50	5,770 60
Totals	\$114 00	\$542 40	\$382 54	\$900 00	\$668 40	\$808 32	\$43,644 33

Following is the monthly returns from the sale of manufactured goods during the year:

December, 1888	\$686 45
January, 1889	2,083 25
February, 1889	829 10
March, 1889	1,040 25
April, 1889	1,042 15
May, 1889	1,083 50
June, 1889	1,305 90
July, 1889	1,102 00
August, 1889	942 95
September, 1889	1,099 85
October, 1889	1,349 65
November, 1889	1,163 50
Total	\$13,728 55

These returns are forwarded monthly to the State Treasurer, and placed by him in the fund of the Home, to be drawn against by the Board, thus constituting a revolving fund for the Home.

As above given, the amount drawn from the several funds of the Home during the year was \$43,644 33, and in addition to this amount the following credits of the Home were realized upon and expended during the year:

Raw material on hand December 1, 1888	\$1,530 60
Manufactured stock on hand December 1, 1888	1,337 15
Bills receivable December 1, 1888	1,796 90
Total	\$4,664 65

Adding to which the above amount of \$43,644 33 we get \$48,308 98, which is the total gross expenditure of the Home for the year.

From this aggregate there should be deducted the following credits:

Amount returned to State Treasurer	\$13,728 55
Raw material on hand December 1, 1889	4,101 99
Manufactured stock on hand December 1, 1889	2,417 62
Bills receivable December 1, 1889	3,166 76

Making a total of

Deducting this total from \$48,308 98, the amount of the gross expenditure, we get \$24,894 06, which is the total net expenditure of the Home for the year.

Of this sum there was expended:

For building and permanent improvements	\$5,500 45
For machinery	382 54
For furniture	719 78
For cancellation of mortgage on property	668 40
Total	\$7,271 17

Which sum being deducted would leave the running expenses of the Home at \$17,622 89.

The last Legislature appropriated \$15,500 for building purposes: \$10,500 for an additional dormitory for the male inmates; \$2,500 for a residence for the Superintendent, and \$2,500 for the enlargement of the dining-room and shops. The Superintendent's residence has been constructed at a cost of \$2,485 35, the shops and dining-room have been enlarged to the extent of the amount appropriated, and the contract for the erection of the new dormitory will be awarded at the next regular meeting of the Board. As there has been some complaint in regard to the delay in erecting the dormitory, the cause of it might as well be here explained. As soon as the building of the Superintendent's residence had been completed, the work on the dining-room and shop got under way, the Board had the plans and specifications for the dormitory drawn up and forwarded to the State Board of Building at Sacramento for approval, as required by law. The plans in due time were approved and placed in the hands of Wells, Fargo & Co. to be returned; they were mislaid or lost by the company, and as the Board had not been notified that they had been approved and returned, considerable time elapsed before an investigation and search was made. Finally, upon being notified by the company that the plans had been received by them and lost and that it was impossible to find them, the Board had new ones drawn up and sent to Sacramento for approval. These were returned approved on December fourth, and immediately upon their receipt the Board had the notices required by law inserted in newspapers, calling for proposals to be opened at the regular meeting in January, 1890.

The new dormitory will accommodate nearly fifty more men. When completed the institution will be prepared to maintain about one hundred and fifty inmates, with manufacturing facilities to utilize their labor. It is believed that this will be near the average of the dependent blind in California. Should the fact be otherwise and a larger number appear, the grounds of the institution belonging to the State are ample for further

enlargement of its facilities. The number above stated can be cared for, taught the blind handicrafts, and maintained without any appreciable increase in the administrative expense, and when that maximum is reached the cost per capita will be greatly decreased.

The industries carried on at the Home are broom-making, chair-caning, and hair-picking; match-making will be introduced during the coming year. Broom-making is the chief industry and it seems highly probable that it will continue to remain so; it is a trade to which the blind are peculiarly adapted, the product is one for which there is unfailing and universal demand, and moreover the business has long been associated in the public mind with the accomplishments and achievements of the blind, so that naturally a way of easy ingress has been opened into thousands of households for the "blind man's broom." Great pride is felt at the Home for the output of the cane-seating department; this work is done by the blind women with great neatness and excellence and deserves the highest commendation. The manufactures find a quite ready sale, and in some qualities the market is so appreciative that it is often difficult to keep up stock. This difficulty will be less likely to occur when an increase in the number of inmates yields its natural increase in the percentage of first class mechanics.

The Board takes occasion to again recommend greater flexibility in the law in regard to the manufacturing department of the Home. It almost invariably occurs that advertisements for bids for broomcorn and other raw materials to be opened on a certain day causes a fictitious advance in prices, the stock being usually held by other manufacturers who are the competitors of the Home in the market for the finished articles. Experience has proved that in this respect the Superintendent, in conjunction with the Board, should be permitted to take advantage of the open market and buy in lots at first hands, like other manufacturers. As there is always a margin of productive capacity against the blind workman and in favor of those who have sight, it is not possible that this or any similar institution shall be made self-supporting. The blind apprentice of necessity wastes more material than one with sight, and, after he acquired the journeyman's skill or the dexterity of the master workman, he requires more time to produce an article of commercial value equal to that made by the man with eyesight. The market is not sentimental. It buys to satisfy its own necessities, unmindful of those of the maker of the goods, and refuses to consider the blindness of the maker a good reason for paying first class prices for second class wares. For these reasons it is very desirable that the law should be sufficiently flexible to permit the closest economy in the purchase of raw material. The Home should be able to take advantage of the market and of all the usual commercial discounts for spot cash.

The Directors desire to acknowledge the obligation due to the able Superintendent, himself blind from childhood, and in his alertness, business faculty, and executive talents are example and encouragement to all who suffer the capital loss of vision.

Compliments are also due to the clerk, teacher, and foreman, whose interest in the success of the Home and welfare of its inmates is not measured by their limited compensation. The skillful physician of the institution is able to report its most excellent sanitary condition, which we are aware is largely referable to his daily attentions and advice.

The Board cannot forget, however, that finally the success of the Home depends upon the disposition and efforts of its inmates themselves, and is happy to acknowledge their cheerful maintenance of discipline, their

industry, temperance, and good order. The Directors hope as the institution develops and offers its shelter to a greater number, that amongst the inmates will be found material for brass and string bands, that music may enliven the hours of recreation, and further cheer those who, being denied the pleasures of vision, transfer its keenness of appreciation to the other senses.

SIXTH ANNUAL REPORT

OF THE

BOARD OF DIRECTORS

OF THE

Industrial Home of Mechanical Trades for the Adult Blind

FOR THE

YEAR ENDING 1890.

SACRAMENTO:

STATE OFFICE, : : : : : J. D. YOUNG, SUPT. STATE PRINTING.
1890.

REPORT.

To the Hon. R. W. WATERMAN, Governor of the State of California:

In pursuance of law, the Board of Directors of the Industrial Home of Mechanical Trades for the Adult Blind, respectfully submits to you its sixth annual report of the management and condition of the Home.

There has been no change in the membership of the Board of Directors during the year.

The officers of the Home are as follows:

President of the Board of Directors.....	John P. Irish.
Vice-President of the Board.....	Warren Olney.
Secretary and Treasurer.....	L. A. Redman.
Physician of the Home.....	Andrew Fine, M.D.
Superintendent of the Home.....	Jos. Sanders.

The salary of the Superintendent is \$2,100 per annum; of the Physician \$1,200 per annum, and of the Secretary \$500 per annum. The employes of the Home and their rates of compensation are as follows:

Foreman of the workshop, per month.....	\$50 00
Clerk.....	40 00
Assistant to the foreman.....	16 00
Teacher in Female Department.....	25 00
Watchman and laborer.....	50 00
Gardener.....	30 00
Drayman.....	25 00
Janitor.....	40 00
First cook.....	35 00
Second cook.....	30 00
Chambermaid.....	25 00
Three waitresses at \$20 per month each.....	60 00
Total.....	\$426 00

The following are the names of the inmates present at the Home during the year, December, 1889, to December, 1890:

NAME.	Date of Admission.	Age when Admitted.	Former Residence.	Native of.	Cause of Blindness.
Fred V. Anderson	July 18, 1889	43	Los Angeles	Denmark	Paralysis of optic nerve.
Maggie Aitken	October 1, 1887	29	Benicia	Michigan	Unknown.
Daniel D. Ahrens	June 18, 1890	68	Weaverville	Germany	Anaurosis.
Wm. Burgoa	May 7, 1886	50	San Francisco	Argentine Repub.	Atrophy of optic nerve.
Ray Bagnelle	August 3, 1888	23	Fresno	Illinois	Ophthalmia.
D. Bellis	January 2, 1888	42	San Francisco	Canada	Inflammation.
Anna M. Brissell	March 30, 1888	38	Sacramento	New York	Result of cold.
Bernard Carlin	July 12, 1888	37	San Francisco	Pennsylvania	Unknown.
Gordon Campbell	September 22, 1885	64	Sacramento	Scotland	Inflammation from foreign substance.
John Chambers	May 2, 1887	55	Siskiyou	Kentucky	Inflammation.
James Croke	May 10, 1886	53	Grass Valley	Ireland	Accident in mine.
Cornelius Cronin	June 2, 1886	54	San José	Ireland	Rheumatic iritis.
Michael Coogan	March 28, 1890	29	San Andreas	California	Accident.
John E. Coffey	December 1, 1890	20	San Francisco	California	Accident.
Kate Clement	February 22, 1887	23	San Francisco	California	Through sickness when five days old.
Isabelle Cienega	February 9, 1890	43	San Francisco	Mexico	Traumatism.
Patrick Donovan	May 18, 1886	37	San Leandro	Ireland	Granulated lids and bad treatment.
Moses Driscoll	August 16, 1888	62	San Francisco	Tennessee	Paralysis of optic nerve.
John O. Durham	June 1, 1886	16	Alameda	California	Accident.
Charles Dugan	September 30, 1889	49	San Francisco	Denmark	Cataract.
John T. Dodson	August 30, 1889	22	Orland	California	Accident.
B. S. Daniels	June 24, 1890	60	San Mateo	Pennsylvania	Born blind.
James Ely	August 14, 1890	18	Oakland	California	Accident and cold.
M. W. Ford	March 26, 1888	41	Independence	New York	Scarlet fever.
John H. Gaffney	January 9, 1886	32	Stockton	California	Opacity cornea.
Antoine Good	December 27, 1887	66	San Francisco	Dalmatia	Unknown.
James Gordon	February 18, 1887	70	Alameda	Kentucky	Hurt on the head.
Thomas Henderson	February 7, 1887	45	San Francisco	Scotland	Struck in eyes with a whip.
Abram E. Hite	August 31, 1885	55	Chico	Ohio	Powder accident.
George W. Hughes	October 24, 1885	53	Yountville	Kentucky	Scarlet fever.
C. S. Hackett*	October 10, 1889	58	San José	Massachusetts	Gunsnot.
Samuel L. Hoover	June 15, 1890	25	Marquette	Illinois	Unknown.
Pauline Howe	February 2, 1889	29	San Francisco	California	Unknown.
Lizzie Hannah	September 7, 1888	42	San Francisco	England	An operation.
James Kurley	March 4, 1886	28	Modoc County	Illinois	Unknown.
Ann Fennell	September 22, 1887	30	San Francisco	New York	New York.
Jacob Kundert†	May 10, 1886	31	San Francisco	Switzerland	Inflammation.
Frank King	June 13, 1890	17	Monterey	Massachusetts	Born blind.
J. C. Kuckenmeister	June 13, 1890	50	Eureka	Germany	Accident.

Daniel Krafky	June 6, 1890	18	Tulare	Minnesota	Accident.
Charles Lurch	June 27, 1886	27	Lake County	California	Inflammation.
F. H. Lamb*	September 19, 1889	57	Oakland	Massachusetts	Anaurosis.
Robert Lowry*	July 15, 1890	55	San Francisco	Canada	Accident.
Joseph Maduro	June 11, 1886	18	Berkeley	California	Cold in eyes.
C. P. Martin	March 22, 1888	26	Vallejo	New York	Ulceration cornea.
Ernest Martin	November 10, 1888	26	San Francisco	Vermont	Scarlet fever.
Joseph Miller	March 18, 1889	40	Sacramento	Iowa	Born blind.
Peter Miller	February 1, 1886	44	San Buenaventura	California	Born blind.
John T. Moore	August 27, 1885	23	San Francisco	California	Injured when a boy.
Austin McLane	August 14, 1890	28	Butte County	California	Opacity cornea.
Emma L. Mast	September 22, 1887	24	San Francisco	California	Unknown.
D. C. Mulhoney	November 14, 1889	27	San Francisco	New York	Cold in eyes.
B. T. Nelson	March 12, 1888	43	Sacramento	New York	Exposure and heavy lifting.
Catherine O'Rourke	February 7, 1889	51	San Francisco	Ireland	Accident.
Henry Parker	May 22, 1887	54	Siskiyou County	Sandwich Islands	Exposure and bad treatment.
Edward Porter	September 22, 1885	28	Placer County	California	Lifting heavy weights.
Thomas Powers	October 19, 1885	40	San Francisco	Ireland	Powder accident.
Lawrence Riley	May 14, 1886	38	San Francisco	New York	Unknown.
Joseph Riley	June 19, 1890	47	Oroville	Ireland	Opacity cornea.
C. L. Robinson†	June 23, 1890	48	San Francisco	Ireland	Cataract.
Jennie Root	October 21, 1890	13	San José	California	Anaurosis.
John Sexton	August 27, 1885	42	San Francisco	Ireland	Brain fever.
Cornelius Shea	October 31, 1885	50	San Francisco	Ireland	Fever.
E. F. Smith	September 7, 1885	61	Oakland	North Carolina	Glaucoma.
W. A. Staggs	November 1, 1888	23	Napa	California	Unknown.
M. N. Stanovich	November 10, 1885	44	San Francisco	Austria	Neuralgia.
Jacob Storck	December 19, 1885	35	Butte County	Germany	Unknown.
Richard Sublett	May 12, 1887	33	San Francisco	San Francisco	Injury to optic nerve.
V. Swotellis	December 27, 1887	51	San José	Russia	Unknown.
A. Schreiber	January 9, 1890	63	San Francisco	Prussia	Accident.
Helena Schau	May 28, 1890	26	San Francisco	Germany	Born blind.
Patrick Tighe	October 29, 1885	39	San Francisco	Ireland	Accident while working in iron.
H. C. Tuck	October 11, 1889	32	Graniteville	Maine	Accident.
Mary Tenney	January 21, 1890	25	Oakland	New York	Cold and measles.
Daniel Weider	August 23, 1885	20	Oakland	Iowa	Unknown.
Wm. P. Wilson	November 1, 1888	64	San Francisco	Sweden	Unknown.

* On leave of absence.

† Left the Home during the year.

‡ Died during the year.

The following is a summary of the expenditures of the Home during the year:

MONTHS.	Pro-visions.	Furni-ture.	Salaries and Wages.	Inmates' Wages.	Raw Material.	Building and Improve-ments.	Shop Expenses.	Insur-ance.	Medicine.	Machin-ery.	Washing.	Miscel-laneous.	Total.
1889—December	\$451 58	\$200 67	\$737 65	\$407 06	\$4,128 18	\$1,132 31	\$33 65	—	\$63 00	\$5 63	\$75 00	\$34 60	\$7,269 33
1890—January	776 82	45 53	763 15	456 44	2,187 99	139 47	46 30	\$226 10	—	—	—	58 96	4,700 76
February	477 66	26 11	742 81	519 56	7 79	2,700 00	55 33	—	—	—	150 00	70 35	4,749 11
March	763 61	15 75	728 65	622 51	69 00	—	67 50	—	151 65	—	75 00	57 80	2,597 22

October	758 09	1 45	747 65	574 00	584 81	373 92	54 00	—	76 60	—	170 00	31 95	2,909 73
November	436 29	51 00	750 15	626 15	3,551 24	28 95	45 27	—	—	27 56	85 00	34 50	3,931 92
Totals	\$7,251 43	\$983 54	\$3,988 13	\$6,381 04	\$15,168 44	\$11,344 39	\$590 75	\$351 10	\$510 10	\$172 39	\$940 00	\$579 17	\$53,160 48

Following are the monthly returns from the sale of manufactured goods during the year:

1889—December	\$1,572 85
1890—January	1,429 90
February	1,572 80
March	1,505 35
April	1,977 85
May	1,786 00
June	2,627 80
July	1,335 70
August	1,467 50
September	1,692 15
October	1,258 15
November	1,247 25

Total \$19,473 30

These returns are forwarded monthly to the State Treasurer and placed by him in the fund of the Home, where they are drawn against by the Board, thus constituting a revolving fund for the Home. As shown by the schedule given above, the total amount drawn from the several funds of the Home and expended by the Board, is the sum of \$53,160 48.

As against this sum there exists the following credits in favor of the Home:

Amount returned to State Treasurer	\$19,473 30
Raw material now on hand	4,161 18
Manufactured stock now on hand	2,392 64
Bills receivable	3,984 79

Total \$30,011 91

Deducting these amounts from the above sum of \$53,160 48, we get \$23,148 51.

To this should be added the following credits on hand a year ago, which have been realized upon and form a part of the amount returned to the State Treasurer during the year:

Raw material on hand December 1, 1889	\$4,101 99
Manufactured stock on hand December 1, 1889	2,417 62
Bills receivable December 1, 1889	3,166 76

\$9,586 37

23,148 57

Total \$32,734 94

Which is the total net expenditure of the Home during the year.

Of this sum there was expended:

For building and permanent improvements	\$11,344 39
For machinery	172 39
For furniture	983 54

Total \$12,450 32

Which sum being deducted from the above sum of \$32,734 94, leaves the actual running expenses of the Home for the year, \$20,284 62.

The gross earnings of the inmates for the year were \$256 22 per capita. Their wages per capita were \$83 96.

The net cost per capita after deducting all credits was \$266 90.

It must be remembered, however, that these averages do not represent the earnings or the wages of the active working force of inmates. The more the asylum feature of the Home gains upon its industrial feature,

the hospital on the workshop, the greater will be the disproportion between the cost of support per capita and the earnings turned into the Treasury and the wages per capita.

The Home has begun to show a gain of the workshop on the hospital. At the time of its establishment the streets were full of adult blind, sightless for many years, nearly superannuated, and much broken physically and mentally through lack of occupation. Many such were in the public almshouses, or divided their time between semi-beggary and those institutions, all the time a charge upon the public.

It was natural that in its beginning the Home should catch a percentage of this class which could do but little service in the workshop, but raised the general cost of support. It is natural also, that the foreclosure of time will reduce the percentage of this class, which is wholly or partially non-contributive to the industrial returns of the institution, and the percentage of those qualified for constant service in the workshop will continue its present increase. If it be possible for every inmate to become a steady contributive worker, the cost of support per capita will not be increased, but the earnings and wages per capita will gain largely. When every one does work there will be left between the cost of support and the earnings of the Home only the impassable margin between the productive power of blind mechanics and those of full faculties. This margin will be narrowed by skill and by economy of superintendency, but can never be obliterated. Meantime, however, the Revolving Fund to which the inmates have this year contributed the large sum of \$19,473 30, will go on increasing until it will constitute a permanent endowment approximately equal to the support of the institution.

The Directors call the attention of the State to the remarkable fact that with all the decrepit and non-working and apprentice classes in the Home, it is able, notwithstanding, to pay into the Treasury the sum of \$256 22 per capita, by reason of its most economical domestic administration and its fine commercial management. This fact derives its chief significance from the blindness of the efficient Superintendent, Mr. Joseph Sanders. The Directors were able, by securing his services, to put the Home in line with the most successful of similar institutions elsewhere, which have realized their highest expectations only when their discipline and organization, being for the blind, were administered by the blind.

The Directors are pleased to note that many of the inmates, out of their wages, have not only clothed themselves comfortably, but have put by savings bank deposits, which, by a few years' accumulation, will lift them above the necessity of public benevolence. This is the purpose for which the Home was created by the State, and it is pleasant to know that while the support of all the inmates, active and non-active, costs less per capita than if they were in the Almshouse, at the same time they are being equipped for self-support and future independence of public or private charity.

The new dormitory, as will be seen by the financial report, was built for less than the amount appropriated for that purpose. The enlargement of the shop, storage, dining, and other needed rooms, permitted by the intelligent liberality of the State, has been effected. By construction of a cottage for the Superintendent, the large central building has been devoted entirely to administrative purposes and the separate use of the

blind women, whose industry, appreciation, and assistance to the institution it is a pleasure to notice and commend.

The Directors find an increasing pressure for admission of blind paralytics, epileptics, total cripples, and others who, in addition to blindness, are otherwise physically incapable or mentally imbecile, and require constant attention in nursing and medication. Of course the reception and maintenance of such is without the scope of this institution, and would so overload it as to obscure and perhaps destroy its valued and profitable industrial feature. The pressure mentioned may grow to such magnitude as to indicate the need of a separate foundation as a public or private benevolence, in the nature of a hospital, for those who add to blindness other physical or mental defects which make it impossible for them to care for themselves at all.

The Board renews its expression of approval of the tried and experienced staff of officers and employes of the Home who have made its interests theirs, and have administered its affairs with fidelity, economy, and devotion to its benevolent and praiseworthy purpose.

JOHN P. IRISH,
President of the Board of Directors.

REPORT
OF
BOARD OF TRUSTEES
OF THE
REFORM SCHOOL FOR JUVENILE OFFENDERS,
LOCATED AT WHITTIER, LOS ANGELES COUNTY,
FOR THE
TWENTY MONTHS ENDING NOVEMBER 30, 1890.

SACRAMENTO:
STATE OFFICE, : : : : : J. D. YOUNG, SUPT. STATE PRINTING.
1890.

REPORT.

To his Excellency R. W. WATERMAN, Governor of California:

SIR: The Board of Trustees appointed by you under Act of Assembly and Senate, approved March 11, 1889, to establish a State Reform School for Juvenile Offenders, and to make an appropriation therefor, beg to make the following as their first report: They have accepted a donation of forty acres of land on the Southern Pacific Railroad, adjoining the Quaker village of Whittier, thirteen miles from the city of Los Angeles. They have also bonded, subject to the action of the Legislature, one hundred and twenty acres of land adjacent to the above mentioned forty, at \$200 per acre. This additional land is needed, as it is our desire to have a large proportion of the boys in this school thoroughly taught fruit growing, vegetable gardening, stock raising, dairying, and the care of poultry, so that while some of the pupils will be made skillful in each of these useful vocations, they will at the same time be producing much of the food necessary for the school.

Immediately after the deed of the forty acres of land was filed with the Secretary of State, the Board of Trustees employed a gardener and laborers and had the grounds judiciously laid out and planted with fruit and shade trees, and a portion of it sowed in alfalfa and barley. Two thousand two hundred and forty-two trees are now making a vigorous growth, besides a large number of flowering shrubs and ornamental plants. We have in the barn forty tons of hay from the barley and alfalfa, and the State's stock has excellent pasture.

There have been great changes in the last twenty years in the buildings for and control of reform schools, and we deemed it necessary to send a committee, a member of which was a competent architect, to visit the most noted eastern institutions of this character. This committee reported in favor of one central structure to be known as the Administration Building, to be surrounded by "cottages" that would each accommodate a family of fifty boys; each family to be in charge of a man and his wife and a teacher. These families to be composed as near as possible of pupils of similar age and similar culpability or innocence.

Plans were carefully prepared that met with the approval of the Trustees, and which were then submitted to you, and after a careful examination received your indorsement.

Building was then immediately commenced, and on the twelfth of February, in the presence of twelve thousand people, the corner-stone of the Administration Building was laid under your auspices, with the impressive ceremonies conducted by the Grand Lodge of Free and Accepted Masons of California. We now beg to report the following buildings completed:

First—A large substantial barn, cow sheds, corral, and poultry sheds, and including rooms, hot and cold water, and all conveniences for the residence of the farmer. The whole of ample size for the institution when it assumes active work.

Second—Conservatory for propagating trees and plants for the orchard and garden, with room for garden tools and implements.

Third—Residence of gardener. A comfortable frame building.

Fourth—Three-story brick power house and trades building. In the first story of this building is a room for forges for teaching blacksmithing, a room for engines and dynamos for supplying heat and light for all the buildings, and a room for storage of fuel. On the second floor are rooms for carpenter shop and paint shop, while on the third floor will be a printing establishment where boys who appear to be adapted to the work can become printers and publish a school paper. There will also be on this floor a shoe shop, where the shoes for the school will be made by the boys themselves, under the superintendence of a skilled workman.

Fifth—A girls' cottage of ten rooms. This is entirely isolated from the other buildings, as the bill provides for the "absolute exclusion of all communication of any kind or character between the sexes."

Sixth—The Administration Building, four stories and basement, of brick and stone. This is a beautiful substantial structure two hundred and four feet long and one hundred and six feet deep, and faces the east.

The basement is well lighted and has a cement floor. In the north wing is a wash-room thirty-six feet six inches wide and fifty-one feet eight inches long. Here are long basins over which the boys wash their hands and faces. Each boy washes in a stream of running water from a separate hydrant and uses a separate towel. This is done to avoid the contagion liable to result from washing in the same water with, or using the same towels used by boys having skin diseases or sore eyes. There are in this room one hundred and fifty of these hydrants, so that one hundred and fifty boys can wash at once. There is also in this room a large water-closet. Adjoining is a room for plunge bath and shower bath. This room is thirty-six feet wide by forty-nine feet long, and also contains a large number of wire lockers, where the boys can leave their ordinary clothing when they change for Sundays or holidays. In the central part of the basement is a play-room forty-eight feet six inches by thirty-six feet nine inches, to be used in inclement weather. There is a milk-room twenty-six feet by thirty feet, and a butter and ice-room twenty-two feet by eighteen feet, and a meat-room twenty-six feet by ten feet. In the south wing of the basement is a boys' dining-room forty-five feet eleven inches by forty-two feet, a bakery and bread-room forty-seven feet six inches by twenty-two feet, and a kitchen, including range, pantry, etc., twenty-three feet one inch by thirty-seven feet four inches.

First floor consists of the chapel one hundred feet by forty feet, capable of seating five hundred pupils. It is expected that this Administration Building will be surrounded by "cottages" containing families of fifty each, and that all will assemble in this chapel for literary and musical exercises and moral instruction. In the central portion of the first floor is a school-room thirty-five feet six inches by thirty-two feet ten inches, with adjoining hat-room; pharmacy, twenty-four feet by fourteen feet eight inches; reception-room, twenty-two feet six inches by eighteen feet six inches; office of clerk and bookkeeper, nineteen feet eight inches by nineteen feet two inches, and halls twelve feet eight inches wide. In the south wing of the first floor are employes' sitting-room, fourteen feet eight inches by sixteen feet eight inches; employes'

dining-room, twenty-five feet by fourteen feet eight inches; four rooms for residence of Superintendent, including bath-room, water-closets, and other closets, and a kitchen for employes and Superintendent and family, eighteen feet by twenty-one feet nine inches. There are six entrances to the first floor, with suitable steps and balconies.

In the north wing of the second floor is the gallery of the chapel. In the south wing and center of the second floor is a school-room, thirty-three feet two inches by thirty-five feet; Superintendent's office, twenty-four feet eight inches by twenty-eight feet; seven bed-rooms for employes; Trustees' room, eighteen feet six inches by twenty-two feet six inches; and a tailor shop, twenty-eight feet ten inches by fifty feet, where a class of boys will be taught tailoring, and will make and repair the clothing for all of the pupils in the school.

On the third floor is a dormitory fifty feet ten inches by thirty-six feet six inches, containing an individual locker for each boy, where he can keep his clothing; a reading-room and library, thirty-nine feet one inch by thirty-five feet ten inches; a dormitory, thirty-three feet by fifty feet, and five bed-rooms for employes.

On the fourth floor is a dormitory fifty-two feet by thirty-eight feet; three rooms to be used for sick pupils; one bed-room for employes; one dormitory, forty feet by forty-five feet, and a storage-room for bedding, etc., forty-eight feet by twenty-four feet; three spacious staircases and elevator lead from the basement to the fourth floor. On each floor are wide halls and a suitable number of bath-rooms, water-closets, and clothes-closets.

The attic will be fitted up for music and band-room, as a suitable bandmaster will be secured and a band organized, composed entirely of the boys of the school. One of the teachers must have sufficient knowledge in military tactics to drill the boys in ordinary maneuvers.

In the sixth story of the tower are hot and cold water tanks.

In the seventh story of the tower is a room to be used as an observatory.

The eighth story of the tower is for the clock.

On each floor are fire hydrants and hose.

We now have this school almost ready for students, and we are glad to say that in every step we have had your assistance and counsel. It has been through your interest and encouragement in this endeavor to save the youth of this land that we have been enabled to erect these buildings in such a comparatively short time.

There are two amendments to the present Act that we hope to have enacted by the ensuing Legislature. First, to change the name of "Reform School for Juvenile Offenders" to "Whittier School of Trades and Agriculture," thus removing the stigma of the word "reform" from the pupils. It will be a school of trades and agriculture, and such a name well describes its work. In giving this name this State will be paying a graceful tribute to the aged Quaker poet, now eighty-three years old, who has ever been the advocate of industrious habits, freedom, and education. Rhode Island, Ohio, and a number of other States have dropped the word "reform" from the name of their institutions of this character.

The second amendment is to provide that all the youths sent to this school be so committed until they are twenty-one years of age, unless, in the judgment of the Trustees, they are sooner reformed. We believe

that probably the greatest work of this institution will be to find out what the pupils are best adapted to, teach them to do it, and whenever possible find them homes in good Christian families where their education will be properly continued under home influences. When sending a boy away from the school under these circumstances we desire not to discharge him, but only to parole him. If he does well and is well treated in his new home he will be left there, but we desire him and the one who has agreed to educate him to know that should either party fail to do his duty we could recall the boy to the school without process of law. We hope to be given the power to act as guardian to these wayward youths until they become of age, and try in this manner to place them on the stage of manhood well equipped for the great drama of life.

After a careful estimate of the cost of maintaining the school for the two and a half fiscal years ending June 30, 1893, we find that to clothe, board, and teach three hundred pupils for that length of time, including all salaries, will cost \$162,750. One half of this is to be paid by the counties from which the boys are sent. We therefore ask the Legislature for an appropriation for maintenance of \$81,383.

It will require for water, pipe-lines, and the construction of reservoir, and piping the same to buildings and over the land, an outlay of \$15,000. There is a water right, running with the land upon which these buildings are erected, belonging to the State from the San Gabriel River.

To purchase electric light plant and engines to furnish power for all shops, for elevators, for electric light, for steam-heating the Administration Building, and necessary machinery and attachments, will cost \$15,500. Furnishing and thoroughly equipping Administration Building and Girls' Cottage will cost \$20,000. To fitting up Industrial Building with machinery and tools for systematic instruction in the theory and practice of the mechanic arts, such as carpentry, blacksmithing, lathe and pattern work, and printing, will cost \$5,000.

The present buildings will not accommodate the pupils already waiting to enter, and there will be immediately demanded three additional brick family buildings that will each accommodate fifty pupils. To erect and equip these buildings will cost \$100,000. For elevators we need an appropriation of \$5,000. There is also needed for the purchase of one hundred and twenty acres of bonded land an appropriation of \$24,000. For fruit trees, shrubs, plants, etc., we need an appropriation of \$3,000. For the purchase of vehicles, live stock, and agricultural implements, an appropriation is needed of \$5,000.

The following is our financial statement for the twenty months of our service as Trustees:

STATEMENT, NOVEMBER 24, 1890.

Appropriation by State of California	\$200,000 00
Moneys received and disbursed by George Mason, Treasurer, as follows:	
For salaries	\$11,038 44
For office expenses	1,265 31
For live stock and stable	2,183 28
For tools and implements	478 32
For garden and grounds	1,483 30
For Trustees' expenses	4,269 45
For material (lumber, water pipe, etc.)	2,631 24
For labor	8,727 59
For architect's fees	4,128 35
For water account (boring well)	484 40
For freight and express	72 85
For groceries, provisions, etc.	303 96

For fuel	\$55 65	
For contract for barn, sheds, etc., with A. H. Don- necken	13,900 00	
For contract Girls' Cottage, with J. M. Skinner and A. F. Mackay	4,000 00	
For Girls' Cottage (furniture)	743 66	
For legal services	550 00	
For insurance	253 05	
For contract for Administration and Factory Buildings, with J. M. Skinner and A. F. Mackay (eight payments)	87,000 00	
For Administration Building (extra work)	1,208 41	
For miscellaneous	4,524 86	
		\$149,302 12
Due R. B. Young, architect, when buildings are accepted by Trus- tees	3,238 35	
Due Skinner & Mackay for erection of Administration and Factory Buildings, ninth and tenth payments	42,334 00	
Balance on hand	5,130 53	
		\$200,000 00 \$200,000 00

The further we go with this work the more its magnitude and importance is revealed to us. The State of California has wisely paid millions and millions of dollars for building, equipment, and maintenance of the State University and Normal Schools, where the fortunate youth of our commonwealth are educated; but for the unfortunate, those who through incapacity or death of parents, or through abject poverty and through hereditary criminal tendencies are thrown upon our streets before they have reached years of discretion, California has done absolutely nothing. Millions of dollars are spent annually by the State, caring for these unfortunates after they have become adults and entered our penitentiaries and insane asylums; but nothing has been done in this State toward taking these youth who have started on the broad road to ruin, teaching them useful trades, habits of industry, and depriving them of the baleful effect of opium, tobacco, alcohol, and impure associations. The result is that California has become notorious for her hoodlums, her insane, and her criminals. We ask you, and through you the Legislature, to hold up our hands; support us in this work we are about inaugurating.

The ideal reform school takes these boys, gives them a good common school education; gives them proper, healthful recreation; studies each one; gives each individual the work or trade he seems best adapted for; makes him skillful in that work; implants hope, self-respect, and ambition in his heart; and, when he goes out from the school still watches him, aids him, and encourages him. This is no experiment we are asking you to further, aid, and indorse. For a half century these industrial, reformatory homes have been in successful operation in Europe and America. Several of the States have two of these schools, and almost all have one. The schools of New Jersey, Rhode Island, Connecticut, and Michigan are particularly noted. The school at Lancaster, Ohio, is one of the most famous. It has over one thousand pupils, and a farm of twelve hundred acres. Everything is done in these schools to make them beautiful, homelike, and to avoid all the attributes of a penal and become distinctively an educational institution. Carefully prepared statistics prove that 90 per cent of the pupils in these schools become good citizens.

To save the criminally inclined youth of this State; to take their corrupting influence from our streets; to train and educate them men-

tally, morally, and physically, so that they will spend their manhood years as farmers, mechanics, and honest laborers, instead of in penitentiaries and insane asylums; to make these boys the bulwark and pride of the State, instead of the burden and shame of our commonwealth—these are the objects of this school, and this is the cause we plead.

Very respectfully yours,

HERVEY LINDLEY, President,
JAS. R. LOWE,
JOSIAH SIMS,

Trustees of the State Reform School for Juvenile Offenders.

WHITTIER, November 28, 1890.

FIRST BIENNIAL REPORT

OF THE

SECRETARY

OF THE

PRESTON SCHOOL OF INDUSTRY

(AT IONE),

DECEMBER 31, 1890.

SACRAMENTO:

STATE OFFICE, : : : : : J. D. YOUNG, SUPT. STATE PRINTING.
1890.

DIRECTORS OF THE PRESTON SCHOOL OF INDUSTRY.

ROBT. T. DEVLIN, PresidentSacramento.
CHARLES SONNTAGSan Francisco.
EDGAR J. DePUESan Francisco.
JOSEPH CRAIGWoodland.
PATRICK REDDYSan Francisco.

DECEMBER 31, 1890.

To his Excellency R. W. WATERMAN, Governor of California:

In our report made November 15, 1890, we called attention to the necessity of additional appropriations for the completion of the Preston School of Industry, at Ione, but we were unable at that time to suggest the amount that would be required. Since the rendition of that report, our Secretary, Mr. Brainard F. Smith, has carefully computed, after consultation with our architect, the various amounts that they both consider requisite. For your information, and that of the Legislature, we file the report of Mr. Smith as a supplemental report.

ROBT. T. DEVLIN,
P. REDDY,
EDGAR J. DePUE,
JOSEPH CRAIG,
State Board of Prison Directors.

REPORT.

To the honorable the State Board of Prison Directors:

GENTLEMEN: As nearly two years have now lapsed since the creation of the Preston School of Industry by legislative enactment, it may not be amiss to refresh your memories by a short history of Senate Bill No. 402—this bill being the parent from whose loins the present Act sprang. It may not be inappropriate also to give a resumé of your official acts as Directors of this School of Industry since the approval of the Act by Governor R. W. Waterman, on March 11, 1889.

Senate Bill No. 402 was originally drawn up by Senator E. M. Preston, of Nevada County, and introduced by him January 29, 1889. It was referred to the Committee on State Prisons and Prison Buildings. The bill, in its primitive form, provided for the establishment of a "State Reform School" at or near the town of Folsom, in the county of Sacramento, and appropriated \$160,000 for the purpose of carrying out the provisions of the bill.

The reasons that actuated Senator Preston in selecting and naming Folsom for the location of the school, and in designating \$160,000 as the amount to be appropriated, were many, varied, and complex. As the Legislature, deeming it best not to place the school in close juxtaposition to a State Prison, enacted that it should be established in Amador County, it would be superfluous and unnecessary to give the Senator's motives in choosing Folsom as the site, except so far as they influenced him in naming the original sum mentioned to be appropriated. But since the location proposed had a very material and important bearing upon the amount of money asked for, and since all your actions as Directors have been vitally affected by the sum given you by the Legislature, it seems especially proper and just that some of the reasons should be given, in this history of Senate Bill No. 402, why Senator Preston designated \$160,000 as the proper amount to be appropriated.

Senator Preston saw a magnificent quarry of granite within a stone's throw of the proposed site, belonging to the State, fully opened and easy of access; a railroad, with stone cars running from this quarry to the contemplated location of the buildings, all the appliances, tools, machinery, etc., for rapidly and successfully quarrying and delivering this granite; brick-clay and wood in abundance upon the selected grounds, for the making of bricks; sand and gravel for mortar and concrete, without limit in the American River, close to hand—all belonging to the State. He saw a State Prison full of brawn, brain, and convict muscle to be utilized in the working of stone, in the making and laying of bricks, and in all the other branches of labor connected with and pertaining to the erection of buildings. He saw wagons, horses, tools, and implements of all sorts, belonging to the State Prison, to aid felon labor in the work of construction. Within half a mile from the selected location was a grand water power being developed, and a power house in process of erection at Folsom Prison for the utilization

of this power in the generation of electric light, in the pumping of water for irrigation and domestic purposes, and for its application to mechanical and other manufacturing uses as a substitute for steam power. He found a gas house with a gas machine at Folsom Prison for the making of illuminating gas for the benefit of this proposed school. He learned that there were over four hundred acres of land surrounding the prison, some of which could be diverted to the uses of this institution—everything belonging to the State, and all to be utilized and used in the erection and establishment of this State Reform School without cost to the State.

With this end in view, Senate Bill No. 402, as proposed by Senator Preston, contained the following provisions:

SEC. 5. The Board is authorized and empowered to set apart and occupy so much of the otherwise unoccupied land, now owned or that may be hereafter owned or acquired by the State at or near the town of Folsom, for the use and occupancy of the said institution, or to purchase such lands adjacent to the prison tract as may be deemed necessary.

SEC. 7. The Board is authorized and empowered in the erection of buildings and the improvements, to use such supplies and materials from the prison at Folsom as may be available, and as can be diverted to such use without material detriment to the welfare of the prison; including convict labor, water and water power, electric power, rock from the quarries, and such other appliances, or articles manufactured at the prison, as may be required.

SEC. 8. From and after the time that the premises are ready for occupancy the Board may divert to said premises such water and water power, electric currents, illuminating gas, articles manufactured in the prison, and other appliances from the prison premises as may be required, and as can, in their opinion, be thus diverted without material injury to the State Prison.

With these provisions incorporated in the bill, Senator Preston reasoned that \$160,000 would be ample to build and equip an institution second to none in the State. Those who assisted him in the framing of his bill agreed with him fully as to the sufficiency of the amount designated, subject to and under these specifications respecting location, prison labor, prison supplies, etc., but under no other circumstances. In fixing the figures at \$160,000 there was no other idea entertained or considered than that this sum would be adequate to establish a State Reform School, provided there should be no expenditure of money for any of the matters and things mentioned as belonging to the State and capable of being transferred and used by the Board. Should the institution be established at any other location in the State, a like condition of favorable circumstances could not occur or exist, and under no other possible surroundings or contingencies would \$160,000 be ample, sufficient, and adequate.

The promoters and friends of this measure, for saving and educating a class of the young, apparently doomed to abject ignorance and a life of criminal pursuits, fully and thoroughly appreciated the fact that unless this crime curing and crime preventive institution was erected at Folsom, by the means and methods proposed, the amount asked for would be utterly insignificant and insufficient for its requirements. It is a sad commentary on the moral status of our times when estimates are given by reliable authorities, placing the number of boys in our State who are fit candidates for reformatory institutions at from one thousand five hundred to two thousand. The cry has been coming from the lips of nearly every Judge of every Court in our land, "What shall we do with these boys!" Our penitentiaries are filled, not with old criminals, but with young felons. The hearts of the observing are sad-

dened as they contemplate the rapidly increasing number of boys of tender years brought before our Courts for punishment.

Senator Preston and his confreres knew that no small or limited accommodations would be equal to the demands of our erring boys. He and his associates in the drafting of this reformatory measure weighed well in their minds the present and future requirements of the proposed Reform School, and reckoned to a certainty that buildings must be erected and provisions made to accommodate from two hundred and fifty to five hundred inmates, at the very least, from the time of the throwing open of its portals for their reception.

All these points were considered in the framing of the original bill, and assisted in fixing the sum asked for at \$160,000.

So much for the ideas of Senator Preston and his friends regarding the location of the State Reform School at Folsom and his reasons for asking for an appropriation of \$160,000.

As said before, this Senate Bill No. 402 was referred to the Committee on State Prisons and Prison Buildings.

When returned to the Senate, it was in a modified and changed form. Instead of being designated as "The State Reform School," the institution is named "The Preston School of Industry," in honor of the framer and father of the original measure. The location is changed from "at or near Folsom, in the county of Sacramento," to "at or within a convenient distance from Ione City, in the county of Amador." Where the original bill provided for the setting apart of land, water power, electric power and electric currents, illuminating gas, etc., the change in location makes it imperative for the State to purchase from one hundred to three hundred acres of land and the buying of water facilities sufficient for the uses of said school and for power in operating machinery. Aside from these changes and modifications, the bill, as returned by the committee with its approval, was essentially unchanged from its primitive form. But these alterations were like removing its heart and lungs.

The advocates and engineers who so successfully brought about the change in location were conscious that an increase in appropriation could not be asked, they being shrewd enough to know that should a larger amount be petitioned for, all hopes of accomplishing their efforts would be lost, for the committee would then refuse the substitution of sites. For this reason no variation appeared in the section fixing the appropriation at \$160,000.

Suffice it to say, that the amended measure passed both the Assembly and the Senate by an almost unanimous vote, and was approved by Governor R. W. Waterman March 11, 1889.

Such is the history of the creation of the Preston School of Industry by legislative enactment.

OFFICIAL ACTS OF THE BOARD OF DIRECTORS.

On March 11, 1889, began your duties and responsibilities as Directors of the Preston School of Industry.

It may be well to preface a resumé of your official acts by a statement of some of the difficulties under which you labored, and the perplex and complex questions you were called upon to answer.

The proposition of a suitable site, having water facilities sufficient for the uses of the school and for power in operating machinery, was a hard

one to solve. Remember, there was no latitude given you to figure the problem as to whether coal, costing from \$1 50 to \$2 per ton, would not be a cheaper power in operating machinery than a water system, with its long lines of ditches, pipes, flumes, etc. Suitable sites having water facilities required by the Act are by no means plentiful. Like angels' visits, they are few and far between.

It was no simple question to settle as to the amount of water power adequate to fill the demands of the institution. It was no easy matter to select a site within a convenient distance both to Ione City and to a water power. Water powers convenient to populous cities and communities are extremely rare. Water powers, with water rights and privileges handy to towns situated as Ione, are valuable properties, and you found difficulties of a financial nature staring you in the face. One of the queries was: How much money could or should you invest for the State in water rights with water privileges for power and other purposes?

To have a thing, in the eyes of the law, is to own it. To own water rights and water powers one must have a title to them; and every one versed in such matters knows that there is no title so fickle, unstable, and uncertain as a title to water rights. No title so hard to establish and prove as the ownership of water. It is more a title of testimony than of record. In searching the title of one right, it becomes necessary to examine the titles and claims of every other water right upon the same watershed. The difficulties encompassing your search for a clear and absolute title to the State for water privileges sufficient for the uses prescribed were great and extended.

You met with perplexities when it came to a selection of one system in preference to others. Each system had its advantages and its disadvantages. No single proposition was perfect or an ideal system of water power. How well and how successfully you met and overcame all obstacles and solved all perplexing problems, the results best show.

The first official act of your honorable Board was a preliminary visit to Ione City on March 23, 1889. An informal meeting was held with the residents of that section for the purpose of gaining general information. It was a spying out of the land.

After due deliberation a blank form was drawn up for the use of those desiring to make offers of sites and of water privileges as per the conditions of the Act. Advertisements were inserted in two of the Amador County papers, for the space of eight weeks, calling for offers of sites, water, etc.

In pursuance with the terms of this advertisement, the Board met in Ione City on July 27, 1889, to open the sealed bids received. Twenty-two different sites were offered and six sources of water supply.

The selection of a location with water facilities for power and other purposes, requiring a knowledge of the science of civil and hydraulic engineering, the Board decided to employ the services of Col. A. W. von Schmidt, he being an engineer of note, to investigate into and report upon such matters before any action should be taken upon the offers made.

Pending these investigations Robert T. Devlin, President of the Board, by virtue of a resolution by the Board, and in accordance with a provision in the Act establishing the school, visited similar institutions in practical operation, and of the best repute in the older Eastern States,

and personally inspected and investigated into their principles and workings, their systems of government, instruction, and discipline, for the information and benefit of the Board. The result of this visit of inspection has been embodied in an extended report by him and published in pamphlet form by the State Printer.

I would state, parenthetically, that the plans adopted by the Board for the main Administration Building, with its annex, as submitted by the architect of the Board, are modified copies of the plans of the State Reform School of the State of Minnesota, obtained by President Devlin while East, the buildings being somewhat reduced in size by the architect, owing to the smallness of the appropriation at your command. The plans for the cottages are also taken from drawings of like buildings inspected by him while on his tour of observation, changed to meet the climatic requirements and particular wants of this locality.

On November 29, 1889, soon after the return of President Devlin, the Board met, and Colonel von Schmidt presented his report.

In general, he condemned the various sites offered, in conjunction with the water powers and water supplies proposed. His condemnation of the water powers and water supplies was moderated, both in this report and a supplemental one made by him, by affirming that ample power and a sufficiency of water for all purposes could be obtained by the making of a reservoir for the storage of water at a place called and known as the Henderson Place, situated about four miles distant from Ione City.

After consideration, the Board resolved to readvertise for offers of sites with water facilities. This conclusion was arrived at from the imperfect and indefinite manner in which many of the water offers had been made, coupled with a desire to do justice to all those having locations and water to offer.

Accordingly, new offers were solicited by readvertisement, and, upon December 28, 1889, the Board met to receive bids. Seventeen offers of sites were received, and six water systems.

It was at this meeting that the Board resolved: "no tract of land outside a radius of three miles from the railroad depot at Ione should be purchased, if a suitable site could be obtained within such limits," it being of the opinion that all locations outside of this limit were not within a convenient distance to Ione City.

Eventually all offers of land were rejected—some of the sites offered not being suitable, and others being quoted at figures higher than the Board felt justified in accepting for the State.

Thereupon the Ione Coal and Iron Company, a corporation owning large tracts of land in the vicinity of Ione City, upon solicitation by the Board, offered to sell the State two hundred and thirty acres at a lower price than any heretofore offered, and to generously donate one hundred acres, allowing the Board to select the land from the company's holdings. The offer of this company was accepted, and a tract of land chosen lying to the north of and about one half mile distant from Ione City, containing three hundred and thirty and twenty-nine one hundredths acres.

From the several water propositions presented, there was one that seemed more feasible, reasonable, and satisfactory to the Board than the others. This proposition carried with it the absolute and sole right and title to the first seven hundred and fifty inches, miner's measurement

of the waters of Sutter Creek—two water ditches, with all their rights of way, flumes, pipe-lines, etc., of a delivery capacity of from four hundred to five hundred miner's inches—with a pressure of not less than two hundred and twenty-five feet on the highest point of ground upon the site selected as a location for the school; also, forty-nine and seventeen one hundredths acres of land, with a substantial dam erected thereon fifty feet high and five hundred and fifty feet long, provided with all the proper and necessary waste ways, water pipes, water gates, etc., for the forming of a reservoir with a storage capacity of about three hundred million gallons of water. There was further attached to this proposition, a guarantee bond that the water and water rights offered, appurtenant to Sutter Creek, should give during six months in the year seven hundred and fifty inches of water, measured under a four-inch pressure, and that the water and water rights, together with the water stored in the reservoir, should give at the lowest stage of the water at least two hundred and fifty inches, measured under a four-inch pressure, and not less than two hundred and fifty inches at all times.

Before rejecting the other water offers, however, the Board appointed S. F. Taylor, a civil engineer of prominence, to examine fully and thoroughly into the merits of the proposition referred to. His report in part was as follows (report dated March 3, 1890):

"The Henderson reservoir site is situated about four miles northeast from the town of Ione, in Amador County, and by the construction of a dam sixty feet in height will contain in round numbers twenty-nine acres, and will have a capacity of 409,800,000 gallons. As to the flow of water in Sutter Creek, from which the supply is taken, I found from actual measurements to contain 102 square feet, with a velocity of 29.7 feet per second, equal to 114,000 miner's inches for ten hours. By careful inquiry and examination I am satisfied that Sutter Creek above the dam will supply for six months in the year a water area of sixteen square feet, equal to 1,700 miner's inches for ten hours. While I have calculated on only six months' flow of water in Sutter Creek, there is a certainty of its being from eight to nine months, and this year the entire twelve months.

"As to motive power desired, I am slightly in the dark, but assuming one hundred and thirty horse-power will be all that is needed or desired, I have based my calculations on that amount for the capacity of the reservoir. One hundred and thirty horse-power with 200 feet pressure requires 240,000 cubic feet per day, or 38,400,000 cubic feet for six months, or one hundred and sixty days of ten hours. There still remains 16,243,216 cubic feet for irrigation purposes (the reservoir containing 54,643,216 cubic feet), which at three feet per day of ten hours (largely in excess of what can possibly be used), you will have water for one hundred and fifty days, or five months.

"For drinking and domestic purposes I consider the water of Sutter Creek, as it now runs, far more wholesome than the Sacramento River, or the Alameda Creek, which is pouring into reservoirs for San Francisco use.

"The ditches which convey the waters of Sutter Creek to the reservoir site and to the Ione Coal and Iron Company's property are of 575 inches capacity and are in good condition, and could be enlarged to 750 inches at comparatively small expense.

"As to the reservoir site offered and obtainable, there is certainly none better in the State, and as to the water supply in Sutter Creek, there is unquestionably enough for any and all purposes, and I certainly recommend their purchase."

Colonel A. W. von Schmidt, in a supplemental report made to the Board, stated, referring to the reservoir offered in this proposition: "With a dam 50 feet high the water can stand at 40 feet and will cover about 30 acres of land. The average depth will be 30 feet; in gallons, 294,030,000. A Pelton waterwheel, with a head of 250 feet, distance, three miles of pipe, fall, 1 foot in 63 feet, will give one hundred and eighteen horse-power; will use 295 cubic feet per minute, or 2,212 gallons; for ten hours, 1,327,200 gallons.

"Now, we have in the reservoir, say, 294,030,000 gallons, which divided by 1,327,200, equals 222 days, which would be the supply in reservoir. Taking 365 days for the year, less 54 Sundays, equals 311 working days, less 222 days water in reservoir, equals 89 days shortage.

"But we can calculate on five months of rain to replenish the reservoir, therefore you will have all the water and power for one hundred horse-power, as above stated, by this reservoir system. This system gives you clear water from Mule Creek; the reservoir will fill every winter, and there are no tailings from quartz mills to contaminate the water."

The report of Engineer Taylor being favorable to the Sutter Creek water system, taken in conjunction with the Henderson reservoir, and Engineer von Schmidt joining with him in commendation of the reservoir site and its storage capacity, the Board concluded to accept this offer, provided satisfactory, clear, and valid titles could be given to the State therefor, and a contract was made and entered into with the parties offering the water rights, ditches, reservoir site, etc., to that effect.

The firm of Cross & Denson, attorneys at law, were employed to examine into and pass upon the titles to all the properties mentioned heretofore as having been favorably considered by the Board.

These attorneys rendered written opinions, stating that they found the titles to all the lands offered were vested in the parties offering them to the State, and that proper deeds or grants from them would convey and vest good and valid fee simple titles in the grantee.

In the matter of water and water rights they filed the following written opinion:

SAN FRANCISCO, June 12, 1890.

To the honorable the State Board of Prison Directors:

GENTS: We have, in compliance with your request, made an examination into the matter of water rights on Sutter Creek, in Amador County, in this State. As you are well aware, the title to running water is a very difficult and embarrassing question, owing chiefly to the fact that the records, even when complete, are not a reliable guide as in the case of title to land. Most of the waters flowing in the creeks of the foothill regions, especially in the mining districts of California, were appropriated in the early days of the State's history, when business was usually done in haste, and seldom with accuracy; and while valid appropriations of the waters were made and perfect titles to the flow and use of waters acquired, it is seldom that a good and complete chain of record to a water right can be found. And since the right to the waters of a stream depends mainly upon the facts of actual appropriation and continuous diversion, it becomes necessary in determining as to such rights to examine the records, and in addition thereto also to investigate the facts independent of the records.

This case is not an exception to the general rule as to incompleteness of chain of record title; but we have been furnished with a map made by Engineer Brown, under your order from actual surveys and inspection; and with many affidavits made by persons who or have been residents of the vicinity, and whose intimate knowledge of the facts enable them to speak with intelligence and gives their testimony great weight; and from facts and information thus presented, and supplementing the records, we are of our

that B. and M. Isaacs have the first and superior right, over all other persons, to the appropriation, diversion, and use of more than 750 inches (miner's measurement) of the waters of Sutter Creek, and which may be diverted at the head of the Empire Ditch, or at any point below. And they also have the right under the law to run said quantity of water into reservoir and store the same.

We submit herewith all abstracts of records, affidavits, and memoranda, the map made by Mr. Brown, and an abstract or tabulated classification of the more material data, which may be preserved among your archives.

Respectfully submitted.

CROSS & DENSON,
Attorneys at Law.

With these reports and opinions before the Board—Engineer Taylor's as to the quantity and sufficiency of water and water power, and the attorneys at law, Cross & Denson, as to the validity of the titles—it finally closed with the parties proffering the properties for sale, and the State of California became the owner of them in the latter part of June, 1890.

The Board thereupon elected Schulze & Meeker as the architects to prepare plans and specifications of a main Administration Building, with an annex, for the Preston School of Industry, to be erected upon the selected site. The general plans as submitted by them were formally adopted, and the buildings are now in process of construction.

The main Administration Building will have a frontage of one hundred and sixty-eight feet, and a depth of fifty feet; is to be three stories high above a basement. From the rear center will extend a corridor thirty feet in length and nine feet wide, connecting the main Administration Building with its annex, which will be two stories high above a basement. The main Administration Building is to be built of common bricks, faced with Sacramento stock bricks (bricks of a quality and finish a medium between common and pressed bricks), and trimmed with lone red sandstone. There is to be a water and clock tower, one hundred and forty-eight feet high, to the right of the main entrance to the building. The corridor and annex are to be built of common bricks. The structure, when finished, will be a model of its kind, for the Board has followed the implied wishes of the Legislature in combining all the excellencies of edifices of a similar character found in the East by President Devlin.

Contracts have been let for such portions of the work of erection as would come within the limit of the present appropriation. The amount of money being at your disposal for the making of such contracts being about \$75,000—the remainder having been expended in the purchase of land, the expenses incidental to and including the purchase of the water system, reservoir site, and the building of the dam, and other expenditures necessary in the various interests of the school. A full and complete statement of all the moneys received from the State Treasurer upon warrants drawn by the State Controller, and how the same has been expended, is hereto attached. Also a statement of the contracts entered into by the Board, and which are payable out of the present appropriation.

ESTIMATES OF APPROPRIATION NECESSARY TO COMPLETE AND FURNISH THE
PRESTON SCHOOL OF INDUSTRY, AND PROVIDE FOR THE MAINTENANCE
THEREOF.

In compliance to the request of the Board, I have, so far as possible, prepared estimates of cost necessary to complete and furnish the school,

so as to place it in full working order for the reception of the wards of the State, and for their maintenance for the next two years.

I have endeavored to limit myself to the actual and pressing wants of the institution, and have constantly kept well in mind your instructions and expressed intentions of not to petition the Legislature for a larger appropriation than is actually demanded and absolutely necessary under existing circumstances.

ESTIMATES OF COST.

Completion of the main Administration Building and its annex (exclusive of tower), including elevator, fire and burglar-proof vault, ovens, artificial stone work, joiners' work, stair work, painting, plastering, tiling, plumbing and sewerage, heating, glass, mantels and grates, hardware, roofing, etc.	\$61,800 00
Finishing tower	\$8,250 00
Tower clock	1,880 00
Three cottages, or family homes, capacity forty inmates	10,130 00
One stable, capacity twenty horses	60,000 00
One barn, capacity twenty cows	9,500 00
One Commissary Building	7,500 00
One Power and Trades School Building (shoe and harness shop, blacksmith and iron working shop, tailor and sewing shop, carpenter and woodworking shop, tin and plumbing shop, printing office, electric light machinery room, ice machinery room, power machinery room, sawmill room, laundry)	8,750 00
Entrance gateways	35,000 00
Architect's fees	1,800 00
	9,724 00
Total for finishing school	\$204,204 00
The above estimates furnished by Henry A. Schulze, Architect of the Board.	

Furnishing and Fitting of Buildings.

Blankets, comforters, etc.	\$3,500 00
Estimates by Levi Strauss & Co., Murphy, Grant & Co., Golden Gate Woolen Manufacturing Co., and California Furniture Co.	
Carpets, oilcloths, etc.	3,700 00
Estimates by C. M. Plum & Co., W. and J. Sloane & Co., D. N. and E. Walter & Co.	
Crockery	900 00
Estimates by Wanglenheim, Sternheim & Co., Nathan, Dohrmann & Co.	
Bed linen, table linen, toweling, etc.	1,350 00
Estimates by Levi Strauss & Co., Murphy, Grant & Co.	
Ranges, kitchen utensils, etc.	1,700 00
Estimates by Holbrook, Merrill & Stetson, W. W. Montague & Co., Geo. W. Tay & Co.	
Wood and willowware	100 00
Estimates by Armes & Dallam, A. S. Hopkins & Bro.	
Furniture	13,475 00
Estimates by California Furniture Co., C. M. Plum & Co., West Coast Furniture Co.	
Fire hose, plugs, hose carts, etc.	1,175 00
Estimates by W. T. Y. Schenck.	
Drug store outfit	775 00
Estimates by Mack & Co., Redington & Co.	
Laundry department	2,780 00
Estimates by Troy Laundry Machinery Co., Pacific Laundry Machinery Co.	
Telephone and electric call outfit	900 00
Estimates by Sunset Telephone-Telegraph Co.	
Electric light system	15,000 00
Estimates by Thomson-Houston Electric Co., Westinghouse Electric Co., Edison General Electric Co.	
Office fittings and supplies	1,000 00
Estimates by H. S. Crocker & Co.	
Hay and store scales	600 00
Estimates by Howe Scale Co., Fairbanks Scale Co.	46,995 00
Amount carried forward	\$251,199 00

Amount brought forward..... \$251,199 00

General Furnishings and Fittings.

Horses, cows, hogs, etc.	\$5,500 00	
Estimates by B. Isaacs, Wm. Woolsey.		
Wagons and other vehicles.	1,875 00	
Estimates by Studebaker Bros. Mfg. Co., Baker & Hamilton, Deere Implement Co.		
Harness	500 00	
Estimates by A. A. Van Voorhies & Co., Main & Winchester, Studebaker Bros. Mfg. Co.		
Farm tools and implements	900 00	
Estimates by Baker & Hamilton, Deere Implement Co.		
Fence around tract	2,000 00	
Estimates by B. Isaacs & Bro.		
Ice machine outfit	6,000 00	
Estimates by Clot & Meese, Rix & Firth, Parke & Lacy Co.		16,775 00

Fittings and Furnishings for Trades School.

Blacksmithing and iron working	\$5,000 00	
Estimates by Baker & Hamilton, James G. Kennedy, Supt. Cogswell Institute.		
Carpentering and woodworking	7,000 00	
Estimates by Baker & Hamilton, James G. Kennedy, Supt. Cogswell Institute.		
Printing, etc.	2,000 00	
Estimates by Tatum & Bowen.		
Harnessmaking, etc.	350 00	
Estimates by A. A. Van Voorhies & Co., Main & Winchester.		
Boot and shoemaking	900 00	
Estimates by Rosseter, Smith & Stoll, Williams-Marvin Co.		
Tailoring and sewing	1,500 00	
Estimates by the Singer Sewing Machine Co.		
School-room outfit	600 00	
Estimates by Bancroft Bros. & Co.		
Tinning and plumbing	2,000 00	
Estimates by Holbrook, Merrill & Stetson.		19,350 00

General Additional Expenditures.

Stocking of farm and grounds, including labor, trees, vines, shrubbery, plants, etc.	\$15,000 00	
Sewerage system	10,000 00	
Water supply system	10,000 00	
Books for library	1,000 00	
Machinery for power house, including wheels, shaftings, pipes, etc.,	5,000 00	
		41,000 00

Maintenance Estimate.

Two hundred and twenty-five inmates, one year, \$200 each	45,000 00	
Furnishing three cottages	6,716 60	
Total expenditures		\$380,000 00

In estimating the amount necessary to provide for the stocking of the farm and grounds, I have figured as follows:

Six laboring men at \$2 per day, twenty-five working days per month, for two years, equals	\$7,200 00	
One head farmer and gardener at \$100 per month, for two years, equals	2,400 00	
Incidentals	400 00	
Stock of trees, vines, plants, hot houses, tools for excavation works, and blastings	5,000 00	
		\$15,000 00

In some cases, perhaps, I have overestimated, but in others I have erred in underestimating the amount adequate to the needs of the institution, and undoubtedly omissions have occurred by reason of the

nature of circumstances, it being impossible to think of everything necessary to the furnishing of an institution of the size of this one.

In conclusion, I would respectfully state to the Board that I have labored to the best of my ability to protect the Board from asking for any unnecessary moneys from the Legislature, and it is my opinion that no less amount than the estimated sum will satisfy the pressing demands of the Preston School of Industry for the next two years.

My report has been delayed by the difficulties encountered in obtaining estimates from those better versed in such matters than myself.

I have to thank the Board for the many evidences of kind courtesy extended towards me in the past two years, thus making the duties of my office a genuine pleasure.

Respectfully submitted.

BRAINARD F. SMITH,
Secretary of the Preston School of Industry.

DECEMBER 31, 1890.

CASH ACCOUNT.

RECEIPTS.

Received from State Treasurer on Controller's warrants..... \$77,195 70

DISBURSEMENTS.

Water system accounts	\$60,998 67
Real estate accounts	7,307 25
Buildings accounts	3,150 85
Office fixtures accounts	208 30
Tools and fixtures accounts	170 73
Farm accounts (clearing grounds)	602 00
Office rents	186 00
Salaries	2,767 75
Postage	60 00
Traveling, etc.	635 85
Expense account	85 45
Repairs to tools account	22 85
R. T. Devlin (trip East)	1,000 00
	\$77,195 70

The above cash receipts and disbursements are up to and inclusive of December 31, 1890.

INDEBTEDNESS ACCOUNT.

Richardson & Gale (mason's contract)	\$57,514 00
Smilie Bros. (carpenter's contract)	13,789 00
B. & M. Isaacs (dam contract)	2,157 00
Timothy Hanley (excavation contract)	437 50
Henry A. Schulze (architect's fees)	2,162 30
Salary payroll and sundry claims	1,250 00
	\$77,309 80

The above indebtedness account includes all contracts and claims up to and inclusive of December 31, 1890.

The indebtedness account is payable out of the present appropriation of \$160,000.

SUMMARY.

Amount appropriated for forty-first and forty-second fiscal years	\$160,000 00
Cash expenditures	\$77,195 70
Indebtedness account	77,309 80
Total	154,505 50
Balance December 31, 1890, to meet current expenses until July 1, 1891	\$5,494 50
